VOLUME II
MORNING SESSION

The deposition upon oral examination of
NICKI C. TURNER, M.D., a witness produced and sworn
before me, Patrice E. Morrison, RMR-CRR, Notary
Public in and for the County of Marion, State of
Indiana, taken on behalf of the defendants at the
offices of Medical Consultants, 2525 University
Avenue, Muncie, Indiana, on November 4, 1997, at
9:20 a.m. pursuant to the Indiana Rules of Trial
Procedure.

1 NICKI C. TURNER, M.D.
2 having been first duly sworn to tell the
3 truth, the whole truth, and nothing but the
4 truth took the stand and testified as follows:
5 DIRECT EXAMINATION CONTINUING
6 BY MR. OHLEMEYER:
7 Q. Dr. Turner, we're here today to continue
8 your deposition. You understand you're
9 still under oath?
10 A. Yes, I do.
11 Q. All right. If you don't understand a
12 question I ask you, will you let me know?
13 A. Yes, I will.
14 Q. Does the phrase "diagnosis of exclusion"
15 mean something to doctors? Is it a term of
16 art?
17 A. The diagnosis of exclusion.
18 Q. A diagnosis of exclusion.
19 A. To exclude a diagnosis, is that what you're
20 asking?
21 Q. Well, Doctor, I'm asking if the phrase "a
22 diagnosis of exclusion" has any specific
23 meaning to you.
24 A. Well, we exclude diagnoses. Excluding a
25 diagnosis means you're going through the

Page 177

Page 179

1 differential and deciding what fits with the
 2 clinical history, the clinical presentation
 3 versus what does not.
 4 Q. And is what you're left with a diagnosis of
 5 exclusion?
 6 A. I don't normally use that term. I use
 7 excluding diagnoses.
 8 Q. But have you heard other doctors use that
 9 term?
 10 A. Not really.
 11 Q. It's not a phrase that has any meaning to
 12 you.
 13 A. If you turn the words around, yes, it does.
 14 If you don't turn the words around, it's
 15 kind of confusing.
 16 Q. Would you define what the word "impression"
 17 means as it's used in medical records?
 18 A. Impression means that, what we feel would be
 19 the most likely diagnosis. At least, I
 20 mean, we put impressions such as
 21 atherosclerotic cardiovascular disease,
 22 hypertension, diabetes, possible neoplastic
 23 syndrome.
 24 Q. How does an impression compare to a
 25 pathological diagnosis?

1 Q. So the role the pathologist plays in
 2 managing a patient's care is to help confirm
 3 your impressions. Or -- well, you tell me.
 4 I mean, is that --
 5 A. The pathologist looks at the tissue,
 6 confirms or excludes what our -- what our
 7 impressions are.
 8 Q. All right. Tell us, Doctor, when did you
 9 first reach your opinion about the cause of
 10 Mrs. Wiley's cancer?
 11 A. I would have to look at the records. Why
 12 don't you give me the records.
 13 Q. Well, why don't you do that.
 14 A. When we decided that this was an
 15 adenocarcinoma is when the transthoracic
 16 biopsy was completed.
 17 Q. My question, Doctor, is when did you,
 18 Dr. Turner, come to the conclusion or reach
 19 the opinion that Mrs. Wiley's cancer was
 20 caused by exposure to environmental tobacco
 21 smoke?
 22 A. That was different from your first question.
 23 Your first question was -- first question
 24 was when did I make the diagnosis what was
 25 causing her lung cancer.

Page 178

Page 180

1 A. Impression is somewhat of a preliminary --
 2 it could be or could not be a preliminary --
 3 it's essentially what you've done is you've
 4 examined the patient, taken a clinical
 5 history, looked at all lab work, at least
 6 the lab work that's presented to you when
 7 you see the patient, and then make your
 8 impressions.
 9 A diagnosis -- is that what you're
 10 asking? A diagnosis is when something is
 11 much more reproducible or much more
 12 documented.
 13 Q. For example, in the context of a
 14 bronchoscopy, if you were the doctor
 15 involved in performing that procedure, you
 16 would record specific impressions you might
 17 have formed as a result of that procedure,
 18 and then send the tissue down to the
 19 pathology lab so they could diagnose it
 20 pathologically.
 21 A. Yes. You would wait for the pathological
 22 diagnosis. My impression would be possibly
 23 an endobronchial lesion, and the primary
 24 diagnosis would have to wait for the
 25 cytology.

1 Q. You must have misunderstood me, Doctor. My
 2 question is when did you, Dr. Turner, reach
 3 the conclusion or come to the opinion about
 4 what caused Mrs. Wiley's lung cancer?
 5 A. When I first saw her, first of all, she had
 6 a right lower lobe collapse and she had an
 7 abnormality of her chest x-ray. She also
 8 had a, what appeared to be a process that
 9 was eating away her bones in the back and
 10 her lumbar spine. Therefore, my concern was
 11 there was some type of neoplastic process
 12 occurring.
 13 When we did the CT scan, she showed
 14 that there was -- the CT scan revealed that
 15 there was a mass in her right lung and,
 16 therefore, my concern was a lung cancer.
 17 When I initially talked with her, she
 18 had stated, in my admission note here, that
 19 she had been exposed to secondhand smoke.
 20 Obviously, when I talked to her about
 21 whether she was a primary smoker or not she
 22 said no. And then I was talking to her
 23 about her other history and, as I do, I talk
 24 to people about exposure to secondhand smoke
 25 or any other problems such as drinking and

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 181

1 everything else. So she had been exposed to
2 secondhand smoke. In my mind, that
3 increases her risk of lung cancer.

4 So what I did is proceeded to that
5 diagnosis -- to rule out that diagnosis or
6 rule in that diagnosis, and that's when we
7 proceeded to do the bronchoscopy. And
8 subsequent to that we had to do a
9 transthoracic biopsy, which diagnosed
10 adenocarcinoma, and it was at that point
11 that I felt that, from the presentation of
12 the bronchoscopy and from the diagnosis and
13 from her clinical presentation, that this
14 was related to secondhand smoke.

15 Q. And my question, Doctor, is when did you
16 come to that conclusion? Can you put a date
17 on it for me?

18 A. Well, from -- not really. It was from the
19 time she was admitted to the time she died.

20 Q. Well, did you suspect or believe that
21 Mrs. Wiley's health problems were
22 smoke-related on the day that you took the
23 history from her?

24 A. What I say here, "rule out persistent cough
25 with hemoptysis," I was concerned that she

Page 182

1 had lung cancer. That there was something
2 going on with her.

3 Q. But -- and I understand that deals with
4 diagnosing or establishing what medical
5 problems Mrs. Wiley had. My question,
6 Doctor, deals with the cause of those
7 problems.

8 Was that the point where you determined
9 in your mind or came to the conclusion that
10 Mrs. Wiley's health problems were related to
11 her prior claim of exposure to environmental
12 tobacco smoke?

13 A. It was probably in the latter part of her
14 hospitalization when I had examined her a
15 number of occasions, repeated the --
16 correction, completed the other diagnostic
17 studies such as the CT, the bronchoscopy,
18 and as we worked through the diagnosis. So
19 it was probably towards the latter half of
20 her hospitalization is specifically when we
21 definitively were able to come up with a
22 cell type.

23 Q. So Dr. Turner, do you recall telling
24 Mr. Wiley on the day that you took the
25 admission history from Mrs. Wiley that her

Page 183

1 problems were smoke-related?

2 A. I do not recall whether I did or not.

3 Q. Is it, knowing what you know about your
4 treatment and the chronology of events with
5 Mrs. Wiley, is it possible you would have
6 told him that?

7 A. I can't tell you whether I did or not.

8 Q. If Mr. Wiley told us you told him that, do
9 you think he's mistaken?

10 A. If Mr. Wiley told you that, then he's
11 probably correct.

12 Q. So then is it fair to say, Doctor, that as
13 early as the date you took the history from
14 Mrs. Wiley you had come to the conclusion or
15 formed an opinion that her health problems
16 were smoke-related?

17 MR. CROSS: I'll object to the
18 question, that's been asked and answered;
19 you just asked her that question, she
20 answered as best she could. You're
21 restating the testimony and asking her to
22 disagree with herself. It's an unfair
23 question.

24 MR. OHLEMEYER: I hope, Mr. Cross,
25 we don't have speaking objections like that

Page 184

1 the rest of the day designed to help the
2 witness answer the question.

3 MR. CROSS: So do I.

4 Q. My question to you, Dr. Turner, is it, as
5 you think back on this, is it possible that
6 you formed an opinion on the date you took
7 the history, the admission history from
8 Mrs. Wiley that her health problems were
9 related to exposure to environmental tobacco
10 smoke?

11 MR. CROSS: Objection. Asked and
12 answered.

13 THE WITNESS: Do I answer that?

14 MR. CROSS: Yes.

15 A. The thing is, when you're taking a history,
16 you're going through a differential
17 diagnosis. And when I took the history, she
18 had been exposed to secondhand smoke. When
19 I saw her, this lady was not a primary
20 smoker, there was a destructive lesion of
21 her lumbar spine, she had an abnormal chest
22 x-ray. Obviously, that was -- the question
23 in my mind was it's a possibility but it was
24 not definitive.

25 I'm going through the differential.

Page 185

Page 187

I'm going through just like any good physician would do. I'm looking at all the factors or else I would not be a good physician. I look at the differential, examine the patient, reexamine the patient, make sure everything fits together. That was the only way to do this.

And I've essentially answered your question. I can't tell you whether I spoke to him or not about that. I can tell you, when I took the history and put it in my H&P, that would increase my suspicion that possibly this was, but until I make a definitive diagnosis I'm not going to put that down.

Q. Well, my question is, notwithstanding what you wrote in the medical record, do you recall coming to the conclusion or telling Mr. Wiley that you believed his wife's problems were smoke-related?

MR. CROSS: Objection, asked and answered.

A. As I already told you, I do not recall. I mean, I don't know what you want -- I'm not going to lie to you. If it's not in my

the diagnosis given the clinical presentation, given the clinical diagnosis, and the data that we had at that time.

Q. Is it possible, Doctor, that you concluded as early as May 30th, 1991, that Mrs. Wiley's health problems were smoke-related?

A. It's possible that as early -- well, the point is, is that I repeated the CT scan, I'm trying to decide how to explain a nonsmoking lady that has a large lung lesion, that is metastatic, and so when I'm going through the differential diagnosis, again, I'm attempting to define why she would have this happen to her.

Q. Well, let me ask you this: On May 30, what's the basis of your statement that she had a large lung lesion?

A. Have to look at the chest x-ray.

Q. Well, but hadn't the bronchoscopy been done?

A. Well, the bronchoscopy apparently had been done by Dr. Patel.

Q. And it was negative?

A. Yes.

Q. So there was no --

Page 186

Page 188

notes here and it's not in my notes here, how am I supposed to remember that?

Q. "Here" being the handwritten progress notes --

A. Yes.

Q. -- and the dictated admission note?

A. Yes.

Q. Those are the best source of the most accurate information you have about the diagnosis or treatment of Mrs. Wiley.

A. I mean, what else is there right now? I mean, when I --

Q. Well, I don't want to interrupt you but there's your recollection. My question to you, Doctor, is, are you telling me that these records that you've referred to, the written progress notes and the typed dictation, are the best and most complete record of what happened at the time it happened with respect to Mrs. Wiley's diagnosis and treatment?

A. Unless I recall something that I will tell you, these are the best ones. Now, you have to go through a differential. You can't just -- you know, everything is as I evolved

A. Supposedly it was negative. You have to ask him whether it was negative or not.

Q. The x-ray, was the x-ray that was available to you on May 30th diagnostic of a large lung lesion? Let me withdraw that question, ask you another one.

Regardless of what I do or don't ask Dr. Patel, you recorded the fact that the bronchoscopy was negative for malignancy in your notes, didn't you?

A. The bronchoscopy was negative for malignancy in my notes? Could you define where that is?

Q. Well, look at your entry for 5/30. That's your admission entry, isn't it?

A. Yes.

Q. See at the bottom of the page, "bronc per Dr. Patel 5/91 - all negative"?

A. Yes.

Q. So the bronchoscopy that Dr. Patel performed prior to Mrs. Wiley's admission to Ball Memorial was negative for malignancy?

A. Yes.

Q. So you had a woman --

A. At least that's what his notes say. That's

1 everything else. So she had been exposed to
2 secondhand smoke. In my mind, that
3 increases her risk of lung cancer.

4 So what I did is proceeded to that
5 diagnosis -- to rule out that diagnosis or
6 rule in that diagnosis, and that's when we
7 proceeded to do the bronchoscopy. And
8 subsequent to that we had to do a
9 transthoracic biopsy, which diagnosed
10 adenocarcinoma, and it was at that point
11 that I felt that, from the presentation of
12 the bronchoscopy and from the diagnosis and
13 from her clinical presentation, that this
14 was related to secondhand smoke.

15 Q. And my question, Doctor, is when did you
16 come to that conclusion? Can you put a date
17 on it for me?

18 A. Well, from -- not really. It was from the
19 time she was admitted to the time she died.

20 Q. Well, did you suspect or believe that
21 Mrs. Wiley's health problems were
22 smoke-related on the day that you took the
23 history from her?

24 A. What I say here, "rule out persistent cough
25 with hemoptysis," I was concerned that she

1 had lung cancer. That there was something
2 going on with her.

3 Q. But -- and I understand that deals with
4 diagnosing or establishing what medical
5 problems Mrs. Wiley had. My question,
6 Doctor, deals with the cause of those
7 problems.

8 Was that the point where you determined
9 in your mind or came to the conclusion that
10 Mrs. Wiley's health problems were related to
11 her prior claim of exposure to environmental
12 tobacco smoke?

13 A. It was probably in the latter part of her
14 hospitalization when I had examined her a
15 number of occasions, repeated the --
16 correction, completed the other diagnostic
17 studies such as the CT, the bronchoscopy,
18 and as we worked through the diagnosis. So
19 it was probably towards the latter half of
20 her hospitalization is specifically when we
21 definitively were able to come up with a
22 cell type.

23 Q. So Dr. Turner, do you recall telling
24 Mr. Wiley on the day that you took the
25 admission history from Mrs. Wiley that her

1 problems were smoke-related?

2 A. I do not recall whether I did or not.

3 Q. Is it, knowing what you know about your
4 treatment and the chronology of events with
5 Mrs. Wiley, is it possible you would have
6 told him that?

7 A. I can't tell you whether I did or not.

8 Q. If Mr. Wiley told us you told him that, do
9 you think he's mistaken?

10 A. If Mr. Wiley told you that, then he's
11 probably correct.

12 Q. So then is it fair to say, Doctor, that as
13 early as the date you took the history from
14 Mrs. Wiley you had come to the conclusion or
15 formed an opinion that her health problems
16 were smoke-related?

17 MR. CROSS: I'll object to the
18 question, that's been asked and answered;
19 you just asked her that question, she
20 answered as best she could. You're
21 restating the testimony and asking her to
22 disagree with herself. It's an unfair
23 question.

24 MR. OHLEMEYER: I hope, Mr. Cross,
25 we don't have speaking objections like that

1 the rest of the day designed to help the
2 witness answer the question.

3 MR. CROSS: So do I.

4 Q. My question to you, Dr. Turner, is it, as
5 you think back on this, is it possible that
6 you formed an opinion on the date you took
7 the history, the admission history from
8 Mrs. Wiley that her health problems were
9 related to exposure to environmental tobacco
10 smoke?

11 MR. CROSS: Objection. Asked and
12 answered.

13 THE WITNESS: Do I answer that?

14 MR. CROSS: Yes.

15 A. The thing is, when you're taking a history,
16 you're going through a differential
17 diagnosis. And when I took the history, she
18 had been exposed to secondhand smoke. When
19 I saw her, this lady was not a primary
20 smoker, there was a destructive lesion of
21 her lumbar spine, she had an abnormal chest
22 x-ray. Obviously, that was -- the question
23 in my mind was it's a possibility but it was
24 not definitive.

25 I'm going through the differential.

1 I'm going through just like any good
2 physician would do. I'm looking at all the
3 factors or else I would not be a good
4 physician. I look at the differential,
5 examine the patient, reexamine the patient,
6 make sure everything fits together. That
7 was the only way to do this.

8 And I've essentially answered your
9 question. I can't tell you whether I spoke
10 to him or not about that. I can tell you,
11 when I took the history and put it in my
12 H&P, that would increase my suspicion that
13 possibly this was, but until I make a
14 definitive diagnosis I'm not going to put
15 that down.

16 Q. Well, my question is, notwithstanding what
17 you wrote in the medical record, do you
18 recall coming to the conclusion or telling
19 Mr. Wiley that you believed his wife's
20 problems were smoke-related?

21 MR. CROSS: Objection, asked and
22 answered.

23 A. As I already told you, I do not recall. I
24 mean, I don't know what you want -- I'm not
25 going to lie to you. If it's not in my

1 notes here and it's not in my notes here,
2 how am I supposed to remember that?

3 Q. "Here" being the handwritten progress
4 notes --

5 A. Yes.

6 Q. -- and the dictated admission note?

7 A. Yes.

8 Q. Those are the best source of the most
9 accurate information you have about the
10 diagnosis or treatment of Mrs. Wiley.

11 A. I mean, what else is there right now? I
12 mean, when I --

13 Q. Well, I don't want to interrupt you but
14 there's your recollection. My question to
15 you, Doctor, is, are you telling me that
16 these records that you've referred to, the
17 written progress notes and the typed
18 dictation, are the best and most complete
19 record of what happened at the time it
20 happened with respect to Mrs. Wiley's
21 diagnosis and treatment?

22 A. Unless I recall something that I will tell
23 you, these are the best ones. Now, you have
24 to go through a differential. You can't
25 just -- you know, everything is as I evolved

1 the diagnosis given the clinical
2 presentation, given the clinical diagnosis,
3 and the data that we had at that time.

4 Q. Is it possible, Doctor, that you concluded
5 as early as May 30th, 1991, that
6 Mrs. Wiley's health problems were
7 smoke-related?

8 A. It's possible that as early -- well, the
9 point is, is that I repeated the CT scan,
10 I'm trying to decide how to explain a
11 nonsmoking lady that has a large lung
12 lesion, that is metastatic, and so when I'm
13 going through the differential diagnosis,
14 again, I'm attempting to define why she
15 would have this happen to her.

16 Q. Well, let me ask you this: On May 30,
17 what's the basis of your statement that she
18 had a large lung lesion?

19 A. Have to look at the chest x-ray.

20 Q. Well, but hadn't the bronchoscopy been done?

21 A. Well, the bronchoscopy apparently had been
22 done by Dr. Patel.

23 Q. And it was negative?

24 A. Yes.

25 Q. So there was no --

1 A. Supposedly it was negative. You have to ask
2 him whether it was negative or not.

3 Q. The x-ray, was the x-ray that was available
4 to you on May 30th diagnostic of a large
5 lung lesion? Let me withdraw that question,
6 ask you another one.

7 Regardless of what I do or don't ask
8 Dr. Patel, you recorded the fact that the
9 bronchoscopy was negative for malignancy in
10 your notes, didn't you?

11 A. The bronchoscopy was negative for malignancy
12 in my notes? Could you define where that
13 is?

14 Q. Well, look at your entry for 5/30. That's
15 your admission entry, isn't it?

16 A. Yes.

17 Q. See at the bottom of the page, "bronc per
18 Dr. Patel 5/91 - all negative"?

19 A. Yes.

20 Q. So the bronchoscopy that Dr. Patel performed
21 prior to Mrs. Wiley's admission to Ball
22 Memorial was negative for malignancy?

23 A. Yes.

24 Q. So you had a woman --

25 A. At least that's what his notes say. That's

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 189	Page 191
<p>1 what he put in his notes.</p> <p>2 Q. Well, did you have any -- I mean, are you</p> <p>3 telling us that Dr. Patel didn't adequately</p> <p>4 or properly perform the bronchoscopy or</p> <p>5 record his findings?</p> <p>6 A. I'm telling you that when he wrote his note</p> <p>7 I'm taking it at his word that that is</p> <p>8 negative. Unfortunately, that does not</p> <p>9 concur with what I was seeing, with what the</p> <p>10 chest x-ray showed, what the CT scan showed,</p> <p>11 and what subsequently, one month later, the</p> <p>12 autopsy showed.</p> <p>13 Q. Well, we're not a month ahead of ourselves</p> <p>14 here. Let's talk about the time Mrs. Wiley</p> <p>15 comes to you. The only evidence you have of</p> <p>16 a large lung mass, as you've described it,</p> <p>17 is a chest x-ray that is suspicious for a</p> <p>18 mass; right?</p> <p>19 A. It says there's a prominent right hilum with</p> <p>20 distal opacification in the right upper and</p> <p>21 middle lobes. Possibility of central tumor</p> <p>22 with distal pneumonia must be ruled out.</p> <p>23 There's volume loss noted with elevation of</p> <p>24 the diaphragm.</p> <p>25 Q. So that x-ray could have been consistent</p>	<p>1 MR. OHLEMEYER: I'm looking at the</p> <p>2 doctor's 5/29 admission note.</p> <p>3 Q. My question, Doctor, it really doesn't</p> <p>4 require any analysis of the record, my</p> <p>5 question to you, Is a chest x-ray that</p> <p>6 reveals atelectasis of the right middle lobe</p> <p>7 with infiltrate involving the posterior</p> <p>8 segment of the right upper lobe a sufficient</p> <p>9 amount of information for you to diagnose</p> <p>10 lung cancer in a patient.</p> <p>11 A. You'd have to take the entire history.</p> <p>12 Q. Well, did you diagnose primary</p> <p>13 adenocarcinoma of the lung in this woman</p> <p>14 based on that chest x-ray?</p> <p>15 A. I've told you before that what you do is you</p> <p>16 look at the clinical presentation, you look</p> <p>17 at the presentation, you look at what</p> <p>18 clinical history you have. Just because --</p> <p>19 I get patients all the time, and that's my</p> <p>20 job, I'm a critical care specialist, I get</p> <p>21 patients from other hospitals, and even from</p> <p>22 here, that they -- the diagnosis may be --</p> <p>23 they're not -- they're not sure of the</p> <p>24 diagnosis, all they know is they can't</p> <p>25 answer the questions, they can't figure out</p>
Page 190	Page 192
<p>1 with pneumonia; right?</p> <p>2 A. A simple pneumonia with a lady that's been</p> <p>3 bringing up blood for six months? And</p> <p>4 that's had a persistent cough and that now</p> <p>5 has a metastatic or some type of lesion</p> <p>6 eating away her bone? That would not go</p> <p>7 along with a simple pneumonia.</p> <p>8 You have to look essentially where the</p> <p>9 money is. With an abnormal chest x-ray and</p> <p>10 with the clinical history that she gave, a</p> <p>11 simple pneumonia would not be the most</p> <p>12 likely diagnosis.</p> <p>13 Q. Well, how about an atypical pneumonia?</p> <p>14 A. Doesn't matter. What type of atypical</p> <p>15 pneumonia are you saying?</p> <p>16 Q. Doctor, all I'm telling you is what your</p> <p>17 record says and I'm asking you, the fact</p> <p>18 that Mrs. Wiley presented with a chest x-ray</p> <p>19 that revealed atelectasis of the right</p> <p>20 middle lobe with infiltrate involving the</p> <p>21 posterior segment of the right upper lobe</p> <p>22 isn't enough for you to diagnosis a lung</p> <p>23 cancer.</p> <p>24 MR. CROSS: Counsel, what are you</p> <p>25 reading from?</p>	<p>1 why this patient is in trouble.</p> <p>2 My job, as an intensivist and as</p> <p>3 somebody that deals with complex internal</p> <p>4 medicine problems is I look, and I tell my</p> <p>5 patients, when people get sent to me after</p> <p>6 being -- I've had patients that have been</p> <p>7 seen at the Mayo Clinic, I've had patients</p> <p>8 that have been other places and they come to</p> <p>9 me and say -- and the doctor sends them over</p> <p>10 and says "I don't know what's going on,</p> <p>11 would you please help me" and what I do is I</p> <p>12 start from the beginning.</p> <p>13 I take the history, which is what I've</p> <p>14 done here, okay, I've essentially reiterated</p> <p>15 what they told me before, but it does not</p> <p>16 mean that I go down the same road. And I</p> <p>17 start over, I look at the patient, look at</p> <p>18 the clinical history, and what makes the</p> <p>19 most sense to that situation.</p> <p>20 If this was atypical pneumonia, why</p> <p>21 would this lady have bone -- something</p> <p>22 eating away at her bones? Why would she be</p> <p>23 deteriorating? She's a 50 -- how old is</p> <p>24 she -- 56 years old. She's supposedly a</p> <p>25 healthy person, never had any other</p>

Page 201

Page 203

1 lesions that I have seen in the airway,
 2 primarily squamous, occur as the primary
 3 there and then they spread to other areas.
 4 Q. Have you ever seen an adenocarcinoma
 5 primary -- a primary endobronchial
 6 adenocarcinoma?
 7 A. No, I have not. In my experience, no.
 8 Q. So if this is, indeed, in this case a
 9 primary adenocarcinoma that presented in the
 10 bronchus, it would be a first in your
 11 experience.
 12 A. In my experience, yes. Usually these are
 13 squamous cell carcinomas.
 14 Q. The majority of adenocarcinomas that are
 15 found primary to the lung are found in the
 16 periphery of the lung; isn't that right?
 17 A. Primary in the lung are usually found in the
 18 periphery.
 19 Q. And do you know what percentage of
 20 adenocarcinomas that metastasize in the lung
 21 are found in the bronchus?
 22 A. I'm not aware there are any, but it's always
 23 a possibility, but I am not aware of any.
 24 Q. Well, not in your experience? You're not
 25 suggesting it's medically impossible or not

Page 202

Page 204

1 reported, are you?
 2 A. If it's reported I have not read it.
 3 Q. Doctor, can tumors in the periphery of the
 4 lung grow towards the bronchus and compress
 5 the bronchus?
 6 A. That usually presents a separate way. I
 7 mean, when I looked at this lung --
 8 Q. I don't want to interrupt you, Doctor, but
 9 the question is, Can tumors that begin in
 10 the periphery of the lung grow towards the
 11 interior of the lung and compress the
 12 bronchus?
 13 A. You would expect their presentation to be
 14 separate. When I looked down in there,
 15 there was a tumor in the airway itself.
 16 Usually when I have a patient that has an
 17 adenocarcinoma that presses in on the
 18 bronchus, it is pushing in. It is not in
 19 the airway itself.
 20 Q. Can tumor in the hilar lymph nodes either
 21 grow into or compress the bronchus?
 22 A. Yes.
 23 Q. So Doctor, am I correct that, prior to June
 24 6th, the primary site of Mrs. Wiley's cancer
 25 had not been determined?

1 A. Prior to June 6th, the primary site of her
 2 lung cancer -- primary diagnosis of her lung
 3 cancer or what was your question?
 4 Q. Well, let's take it that way. Had she been
 5 diagnosed with carcinoma of the lung prior
 6 to June 6th?
 7 A. The suspicion was there that that's what we
 8 were dealing with. It had not been
 9 diagnosed.
 10 Q. And prior to June 6th, had the histological
 11 type of cancer that Mrs. Wiley suffered from
 12 been diagnosed?
 13 A. The histologic type.
 14 Q. Let me rephrase the question. Prior to June
 15 6th there had been a biopsy of a growth in
 16 her chest wall; isn't that right?
 17 A. Yes.
 18 Q. And that, the pathology from that biopsy
 19 suggested a poorly differentiated carcinoma,
 20 probably not squamous or small cell; right?
 21 A. Yes.
 22 Q. And then you, on June 5th, decided that the
 23 airway should be evaluated to help confirm
 24 or find the primary site of Mrs. Wiley's
 25 cancer; right?

1 A. Well, myself as well as any other physicians
 2 on the case that I might have talked to.
 3 Q. Well, but you signed the progress note on
 4 June 5th that said "need to evaluate airway
 5 to obtain biopsy cytology to help confirm
 6 primary site."
 7 A. Yes.
 8 Q. Why didn't you guys do that sooner?
 9 A. Well, because this poor lady had been sick
 10 for some time. She had -- she was in pain,
 11 she had a lesion in her lower back which is
 12 extremely painful. The bone was being eaten
 13 away. And if there was an easier way to
 14 make the diagnosis, that's what you do. I
 15 mean, an easier way for the patient to make
 16 the diagnosis. There was a lesion, a very
 17 firm lesion on her chest wall and,
 18 therefore, that's what we did. You don't do
 19 a complicated procedure and put the patient
 20 through something if it's not indicated and
 21 we would not get some benefits from it.
 22 Q. So there was a possibility that the
 23 diagnosis of the mass on the chest wall
 24 might have given you some information that
 25 would have led you to believe the primary

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 205	Page 207
<p>1 source of that cancer was somewhere other</p> <p>2 than the lung. Is that what you're telling</p> <p>3 me?</p> <p>4 A. The possibility that, if we biopsied that</p> <p>5 lesion on the chest wall, that it would give</p> <p>6 us another source of a primary, yes.</p> <p>7 Q. What would you have looked for in order to</p> <p>8 rule out -- my question, really, I guess,</p> <p>9 you might have answered it, is, on May 29th,</p> <p>10 May 30th you have a woman who has an</p> <p>11 abnormal x-ray that you've told me, in great</p> <p>12 detail, leads you to suspect a cancer of the</p> <p>13 lung. My question to you is, is why wait a</p> <p>14 week to perform a bronchoscopy on that</p> <p>15 woman?</p> <p>16 A. Well, because, again, this patient was in a</p> <p>17 lot of pain, we were hopeful -- and if you</p> <p>18 notice, also, that I was doing sputums to</p> <p>19 see if there's any chance that we could make</p> <p>20 the diagnosis without doing an invasive</p> <p>21 procedure. When you treat a patient, you do</p> <p>22 the least invasive first. And this happens</p> <p>23 all the time.</p> <p>24 If I have a patient with an abnormal</p> <p>25 chest x-ray and they have a lymph node up in</p>	<p>1 were -- the date selected was 6/6, the date</p> <p>2 by Dr. House was 10 of June. The date</p> <p>3 received and the date on there was the 10th</p> <p>4 of June.</p> <p>5 Q. All right.</p> <p>6 A. So what was your question?</p> <p>7 Q. My question is, What do the pathologists</p> <p>8 diagnose on the 10th of June?</p> <p>9 A. As you can see on the pathology report, it</p> <p>10 says a few atypical cells from the right</p> <p>11 hilar mass. The next one is negative right</p> <p>12 hilar mass. The next one is sputum trap,</p> <p>13 which is body fluid, highly suggestive of</p> <p>14 squamous cell carcinoma.</p> <p>15 So what they're saying is, is that</p> <p>16 these are atypical cells. One says</p> <p>17 negative, which is not unusual. A few</p> <p>18 atypical cells. And highly suggestive of</p> <p>19 squamous cell carcinoma.</p> <p>20 Q. There's no pathological diagnosis of</p> <p>21 squamous cell carcinoma on June 10th.</p> <p>22 A. It says a few atypical cells highly</p> <p>23 suggestive of squamous cell; it's not a</p> <p>24 diagnostic, no.</p> <p>25 Q. Is one of the reasons -- and by the way, you</p>
Page 206	Page 208
<p>1 the supraclavicular fossa, I go there. I</p> <p>2 don't do a procedure -- or at least a good</p> <p>3 physician would not do a procedure that</p> <p>4 would be riskier, they would go for where</p> <p>5 the biopsy would be easily -- easiest found.</p> <p>6 Q. So on June 6th you do the bronchoscopy; on</p> <p>7 June 10th you're still waiting for the</p> <p>8 pathology and the cytology from that</p> <p>9 bronchoscopy.</p> <p>10 A. Let's look at the -- let's look where the</p> <p>11 cytologies are coming back and what the</p> <p>12 dates are on those. Do you have those with</p> <p>13 you?</p> <p>14 Q. Well, why can't we just look at the notes,</p> <p>15 Doctor?</p> <p>16 A. Because I don't write -- I mean, I look at</p> <p>17 the whole chart. I do not just write at the</p> <p>18 notes.</p> <p>19 Q. Well, I've got a pathology report dated June</p> <p>20 12, 1991, that says -- I'm sorry, that's the</p> <p>21 wrong one. That's from the fine needle --</p> <p>22 A. Now, on the 10th of June -- I did the bronc</p> <p>23 on the 6th.</p> <p>24 Q. Correct.</p> <p>25 A. On the 10th of June we see that the slides</p>	<p>1 could have obtained sputum samples without</p> <p>2 doing the bronchoscopy.</p> <p>3 A. Well, sputum samples are very -- I mean, we</p> <p>4 can do, and we did do that, because, as you</p> <p>5 can see, one of these, I was trying very</p> <p>6 hard not to do any invasive procedures</p> <p>7 unless it was necessary to help this lady.</p> <p>8 That's what we always do. But it's unusual</p> <p>9 to be able to -- to be able to make a</p> <p>10 diagnosis, depends on whether she can cough</p> <p>11 effectively, how many secretions she's</p> <p>12 having, is the tumor shedding at that point</p> <p>13 in time.</p> <p>14 Q. Which is all part of the reason why you do</p> <p>15 the bronchoscopy.</p> <p>16 A. Yes.</p> <p>17 Q. And the bronchoscopy, the biopsy material,</p> <p>18 tissue obtained from the bronchoscopy was</p> <p>19 non-diagnostic of squamous cell.</p> <p>20 A. It was suspicious. You had a few atypical</p> <p>21 cells and you had a few cells highly</p> <p>22 suggestive of squamous cell carcinoma. It</p> <p>23 was not negative.</p> <p>24 Q. But it was not positive. It was not</p> <p>25 diagnostic of squamous cell.</p>

Page 209

1 A. It was suspicious for squamous cell
2 carcinoma and there was also atypical cells.
3 Q. Now, in hindsight, of course, we know that
4 this woman didn't have squamous cell
5 carcinoma.
6 A. Yes.
7 Q. So as suspicious as that might have been, A,
8 it wasn't diagnostic; and B, it didn't turn
9 out to be correct. Did it?
10 A. No. Because we completed -- that's one of
11 the reasons, if there was a diagnosis here,
12 definitively diagnostic of squamous cell, we
13 would have stopped at that point. It was
14 not. Therefore, we proceeded to the
15 transthoracic biopsy.
16 Q. Even though the patient was under no code
17 status and was in a condition that prevented
18 her from being managed at home.
19 A. Yes. We do that -- I mean, just because
20 there are no code doesn't mean you don't
21 care for them, you don't treat them. We
22 have a number of patients that are no code,
23 but you still don't -- you don't give up all
24 hope.
25 Q. If Mrs. Wiley did, indeed, have a

Page 210

1 bronchogenic carcinoma, cancer of the lung,
2 on June 10th there certainly would be a
3 limited prognosis for her survival.
4 A. Depends on the type of cell. I mean, again,
5 what we were trying to do is give this lady
6 some more time and that's one of the reasons
7 why we were still looking.
8 Q. What cell type would have given you -- what
9 cell type, in your opinion, would have
10 presented a less limited prognosis if this,
11 indeed, were a bronchogenic carcinoma?
12 A. Well, the only cell type that would possibly
13 be would be a small cell, or an oat cell.
14 Q. So just so I make sure I understand the
15 question and the answer, if Mrs. Wiley had a
16 small cell, or an oat cell, carcinoma and
17 you could demonstrate that on June 10th,
18 then you believed her prognosis would be
19 better than if she had an adenocarcinoma or
20 a squamous cell carcinoma.
21 A. If she was amenable to therapy, it's a
22 possibility we might have been able to give
23 her some additional time. It depends on how
24 she would have responded. It depends on the
25 tumor load.

Page 211

1 Q. But all things being equal, you were looking
2 for information about the histology because,
3 am I correct, in your opinion, if you had
4 found that it was a small cell or, as you've
5 described it, an oat cell carcinoma, you
6 would be more optimistic about the potential
7 for treatment.
8 A. This lady had a large tumor mass. We were
9 hopeful, just to give her some semblance of
10 hope, and we would not have gone on without
11 discussing the case.
12 I mean, there was several physicians on
13 this case. Dr. Songer -- if Dr. Songer felt
14 that most likely there was no hope -- but
15 I've worked with him on a number of cases
16 and we just don't do that to patients.
17 Q. Well, I understand that, Doctor, but my
18 question is, all things being equal, when
19 you're waiting for these pathology results,
20 are you more or less encouraged by a
21 pathological diagnosis that indicates you're
22 dealing with a small cell carcinoma as
23 opposed to a squamous?
24 A. If it was this small cell carcinoma, that
25 would possibly increase her ability to

Page 212

1 respond to some extent to some type of
2 chemotherapy regimen or radiation. Again,
3 I'm not an oncologist, but in my experience,
4 I mean, when you have a patient that is this
5 ill, you try to do the best you can for that
6 patient.
7 Q. By June 11th then, there is still not a
8 histological diagnosis of adenocarcinoma.
9 A. No.
10 Q. And by June 14th, there is an indication
11 that one of the pathologists thinks it's an
12 adenocarcinoma but another pathologist
13 thinks it looks more like a squamous cell
14 carcinoma; right?
15 A. I think there were two pathologists that
16 thought it was diagnostic of an adeno, and
17 one -- I have to find that. Do you have
18 that sheet with you?
19 Q. June 14th, your note.
20 A. After talking with Dr. Baldwin -- obviously,
21 he was going to clarify that.
22 Q. Let me stop you there. Did Dr. Baldwin ever
23 clarify that for you, that discrepancy among
24 the diagnoses? For the record, Doctor,
25 you're now referring to the pathology

1 report; right?

2 A. Yes.

3 Q. What I'd really prefer you to do is to take

4 a look at your note and tell me what you

5 knew on June 14th.

6 A. June 14th it says, "discussed case with

7 Dr. Baldwin calling transthoracic adeno but

8 reportedly chest wall looked more like

9 squamous cell carcinoma. He will look into

10 this discrepancy and clarify."

11 Q. Let's start right there. Did he ever

12 clarify that for you?

13 A. Well, oftentimes a pathologist -- and you

14 could -- you need to ask him, obviously.

15 But a pathologist will make a dictation on a

16 note rather than write in the chart.

17 Q. Right. So what is -- my question is, did he

18 ever look into that discrepancy and clarify

19 it for you?

20 A. Well, it says here, "The previous

21 surgical --"

22 Q. "Here" being what?

23 A. This pathologist's report of the 12th. Date

24 12th of June. It says, "The previous

25 surgical of a chest wall mass on this

1 patient is noted. This has Ball Hospital

2 No. 5534-91. Slides from the previous

3 surgical were reviewed. In addition slides

4 from this fine needle aspiration and the

5 previous surgical were seen by Dr. Sandquist

6 and Brown. All of us agree that the chest

7 wall tumor and the tumor from the lung fine

8 needle aspiration appear to be the same.

9 Dr. Sandquist and myself favor a diagnosis

10 of adenocarcinoma. Dr. Brown favors a

11 diagnosis of poorly differentiated

12 carcinoma."

13 Q. And my question to you, then, is, did

14 Dr. Baldwin ever look into that discrepancy

15 and clarify it for you?

16 A. He most likely did or I wouldn't have put

17 that on the diagnosis.

18 Q. Why in your notes do you record the

19 clarification from Dr. Baldwin?

20 A. Well, this is -- this note here from the

21 pathology department I believe is

22 clarification. You could ask him

23 specifically.

24 Q. But, see, the reason I'm asking, Doctor, is

25 that's dated June 12 and your note is dated

1 June 14. So two days after the path report

2 you say that Dr. Baldwin is going to look

3 into the discrepancy and clarify it. I want

4 to know if he ever did that for you.

5 A. I can't recall.

6 Q. Okay. Now, at the point in time where

7 Mrs. Wiley died, did you believe that she

8 suffered from a primary adenocarcinoma of

9 the lung?

10 A. At the point that she died, did I believe

11 that she suffered from a primary

12 adenocarcinoma of the lung. Yes, I did.

13 Q. Is there any other doctor who records or

14 describes or shares that opinion that you

15 can point to in these medical records?

16 A. In the notes? If they did not note it on

17 this record, I cannot tell you that.

18 Although, it often happens that physicians

19 will continue to follow a patient in the

20 hospital, may not always make notes. We

21 talk about patients.

22 Q. Okay. So the answer to my question, though,

23 is that you are the only doctor who has

24 recorded an opinion in these medical records

25 that Mrs. Wiley suffered from an

1 adenocarcinoma of the lung, a primary

2 adenocarcinoma of the lung.

3 A. That is noted in these medical records, it

4 apparently is so.

5 Q. Then let me go on further. In your death

6 summary which was dictated 7/21-24/91, you

7 go so far as to say Mrs. Wiley's cause of

8 death was metastatic adenocarcinoma of the

9 lung secondary to secondhand smoke. So my

10 question to you, Doctor, is when did you

11 reach that opinion?

12 A. Well, when we obtained the biopsy, the

13 transthoracic biopsy, that was consistent

14 with adenocarcinoma according to two

15 pathologists.

16 Q. But at that point in time, how did you know

17 that that adenocarcinoma was primary as

18 opposed to metastatic to the lung?

19 A. Because, given the clinical presentation,

20 what I saw at the time of bronchoscopy,

21 that's the only diagnosis that would make

22 sense.

23 Q. All right. Then what is the basis of your

24 conclusion that her metastatic

25 adenocarcinoma of the lung was secondary to

Page 217

Page 219

1 secondhand smoke? Let me ask you a better
 2 question first.
 3 What do you mean by secondary in that
 4 sentence?
 5 A. That means that I felt that secondhand smoke
 6 was the primary cause of her lung cancer.
 7 Q. Tell me what the basis of that opinion was
 8 on July 21, 1991.
 9 A. Well, from the clinical presentation, from
 10 the fact that this tumor was arising from
 11 the bronchus, that this lady was a
 12 nonsmoker, non-primary smoker, the fact that
 13 she had been exposed to secondhand smoke,
 14 the fact that she had metastatic lesions to
 15 the bones, the fact that there was no
 16 other -- her breast examination was
 17 negative, her CT of her abdomen revealed no
 18 evidence of primary pancreas or primary
 19 liver or renal cell carcinoma. Nothing else
 20 made sense. That was the only diagnosis
 21 that I could come up with at this point.
 22 Q. The clinical presentation doesn't in and of
 23 itself suggest or indicate to you what
 24 caused that woman's cancer, does it?
 25 A. The clinical presentation, you're talking

1 Q. What you have here is a tumor that, for the
 2 first time in your career, you believe to be
 3 an adenocarcinoma arising in the bronchus,
 4 in a woman who claims to have been a
 5 nonsmoker exposed to environmental tobacco
 6 smoke, and you now have for the first time
 7 ever, I take it, concluded that you have a
 8 patient with a metastatic adenocarcinoma of
 9 the lung secondary to secondhand smoke.
 10 A. That's not true.
 11 Q. What's not true about it?
 12 A. The point is --
 13 Q. Doctor, excuse me, what's not true?
 14 MR. CROSS: Let her finish her
 15 answer, counsel.
 16 Q. What's not true about the statement I just
 17 made?
 18 A. Okay. Let me restate that statement, okay?
 19 What you're asking is, is this correct, the
 20 fact that I have a 56-year-old female that
 21 has been exposed to secondhand smoke, has a
 22 bronchial carcinoma consistent with
 23 adenocarcinoma that was diagnosed by a
 24 pathologist and I made the diagnosis of
 25 secondhand smoke as a causative etiology.

Page 218

Page 220

1 about her history and physical examination?
 2 Q. Well, my question, I guess, is this: If you
 3 find primary adenocarcinoma of the lung in a
 4 nonsmoker who says that he or she had been
 5 exposed to environmental tobacco smoke, is
 6 that all the information you need to
 7 determine that that cancer was secondary to
 8 secondhand smoke?
 9 A. I think if I -- in my opinion, if I know
 10 someone has exposure to secondhand smoke, it
 11 depends on the amount of exposure, whether
 12 they had any other type of factors that
 13 would have favored some other etiology, then
 14 I would have to take that into consideration
 15 as the possible etiology given the history
 16 that we know.
 17 I mean, if I have a patient that's
 18 drinking two pints of whiskey a night and
 19 they have cirrhosis, you know, you look at
 20 cause and effect, what the --
 21 Q. Well, Doctor, suspicions --
 22 A. Suspicions are --
 23 Q. I don't mean to interrupt you.
 24 MR. CROSS: Let her finish her
 25 answer.

1 Is that your question?
 2 Q. Yes. Let's just take it one at a time. Had
 3 you ever diagnosed secondhand smoke as a
 4 causative etiology prior to July of 1991?
 5 A. I have had a number of cases that I have
 6 been extremely suspicious. We have patients
 7 that their husbands or wives smoke around
 8 them -- let me finish. That they are
 9 exposed either to some of the factories
 10 around here, to secondhand smoke, such as
 11 Warner Gear, I have been extremely
 12 suspicious that their cancers were related
 13 to secondhand smoke since there was no other
 14 factors possible.
 15 Q. Had you ever dictated a death summary prior
 16 to July 21, 1991, where you attributed the
 17 cause of death to metastatic adenocarcinoma
 18 of the lung secondary to secondhand smoke?
 19 A. I cannot tell you whether I did or not.
 20 Q. Well, do you think you did?
 21 A. I can't. I can't tell you whether I did or
 22 not.
 23 Q. And prior to July of '91 you had never seen
 24 a primary adenocarcinoma of the lung present
 25 in the bronchus.

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 221	Page 223
<p>1 A.No.</p> <p>2 Q.Prior to July of 1991, what effort had you</p> <p>3 made to investigate or obtain information</p> <p>4 about other potential risk factors for lung</p> <p>5 cancer that Mrs. Wiley might have</p> <p>6 encountered in her life?</p> <p>7 A.Prior to June of '91.</p> <p>8 Q.July of '91.</p> <p>9 A.Well, she was admitted on June 29th, so I</p> <p>10 had her history, there was a couple of days</p> <p>11 there. Since I had just met her, I have to</p> <p>12 take her word, as well as her husband,</p> <p>13 whatever they gave to me during her</p> <p>14 hospitalization as to the risk factors that</p> <p>15 would be involved in her lung cancer.</p> <p>16 Q.So you're not telling us, Doctor, are you,</p> <p>17 that there is nothing else that could have</p> <p>18 caused Mrs. Wiley's lung cancer. I think</p> <p>19 what you're telling me is, based on the</p> <p>20 information you had available to you and</p> <p>21 what you believe to be the situation at the</p> <p>22 time, you attributed her lung cancer to what</p> <p>23 you believed to be the most likely cause.</p> <p>24 A.In her presentation -- let me restate your</p> <p>25 question. In her presentation, with an</p>	<p>1 cannot -- there are no other precipitating</p> <p>2 factors, I would be extremely suspicious</p> <p>3 that was the cause.</p> <p>4 Q.If Mrs. Wiley had presented with a primary</p> <p>5 adenocarcinoma of the lung, but you didn't</p> <p>6 have any information about her history,</p> <p>7 would the fact that she had a primary</p> <p>8 adenocarcinoma of the lung give you enough</p> <p>9 information to determine what caused her</p> <p>10 disease?</p> <p>11 A.No.</p> <p>12 Q.So is it fair to say, Doctor, that you can't</p> <p>13 have and don't have -- you couldn't have</p> <p>14 reached an opinion about Mrs. Wiley's --</p> <p>15 about the cause of Mrs. Wiley's cancer</p> <p>16 without some information about her history.</p> <p>17 A.Yes.</p> <p>18 Q.Okay. What effort did you make, beyond</p> <p>19 what's recorded in these medical records</p> <p>20 that you've produced to us, to obtain an</p> <p>21 accurate and complete history of</p> <p>22 Mrs. Wiley's possible exposure to risk</p> <p>23 factors for lung cancer?</p> <p>24 MR. CROSS: At what point in time?</p> <p>25 Q.Prior to July of '91.</p>
Page 222	Page 224
<p>1 endobronchial lesion, an adenocarcinoma,</p> <p>2 secondhand smoke exposure, no other factors</p> <p>3 that I could come up with to cause this</p> <p>4 presentation, that is the only diagnosis</p> <p>5 that I could come up with.</p> <p>6 Q.But my point is, is that doesn't necessarily</p> <p>7 mean that something else couldn't have</p> <p>8 caused this.</p> <p>9 MR. CROSS: Objection, asked and</p> <p>10 answered.</p> <p>11 MR. OHLEMEYER: Let me rephrase it.</p> <p>12 Q.The fact that you find lung cancer in a</p> <p>13 nonsmoking woman who claims exposure to</p> <p>14 secondhand smoke, does or does not that</p> <p>15 exclude the possibility that something else</p> <p>16 might have caused that cancer in your</p> <p>17 opinion?</p> <p>18 MR. CROSS: Same objection.</p> <p>19 A. When we look at a patient, and we look at</p> <p>20 the factors that may be causing this, what</p> <p>21 you do is you look at percentages. If this</p> <p>22 patient -- if I had another woman, or</p> <p>23 another man, or whoever came in to me and</p> <p>24 has a primary lung carcinoma and they have</p> <p>25 been exposed to secondhand smoke, and I</p>	<p>1 MR. OHLEMEYER: Thank you.</p> <p>2 A.Well, all I had was what she told me. I</p> <p>3 didn't know this lady before.</p> <p>4 Q.So your opinion, in July of '91, is only as</p> <p>5 good as the information that's available to</p> <p>6 you.</p> <p>7 A.Information that was presented to me at the</p> <p>8 beginning, when she presented to my service,</p> <p>9 when Scott Walker asked me to see the</p> <p>10 patient; during the time that I talked to</p> <p>11 her husband; during the whatever weeks I</p> <p>12 took care of her and her family, that's the</p> <p>13 information I used to make this diagnosis.</p> <p>14 Q.Well, I want to separate your diagnosis from</p> <p>15 your opinion about the cause of her death.</p> <p>16 I want to make sure you're not -- we're</p> <p>17 using -- when you say "make the diagnosis,"</p> <p>18 do you mean the diagnosis of primary</p> <p>19 adenocarcinoma of the lung or do you mean</p> <p>20 the diagnosis or the opinion you've reached</p> <p>21 about the cause of her disease?</p> <p>22 A.As far as I'm concerned, when I write this</p> <p>23 on a dictation like this, that's a legal</p> <p>24 record, and so my opinion and my diagnosis</p> <p>25 are essentially the same. There was nothing</p>

Page 225

1 else to explain this diagnosis.
 2 Q.Okay.
 3 A.And I do the same thing with head traumas
 4 that are involved secondary to multiple
 5 vehicular accidents, end stage liver disease
 6 secondary to alcoholism, end stage renal
 7 disease secondary to whatever.
 8 Q.Would you agree with me, Doctor, that in --
 9 THE WITNESS: Excuse me, could I
 10 get a drink of water?
 11 MR. OHLEMEYER: Sure.
 12 MR. CROSS: Let's take a break.
 13 (A recess was taken.)
 14 MR. OHLEMEYER: Back on the record.
 15 Q.Doctor, if you don't understand a question,
 16 will you let me know?
 17 A. Yes.
 18 Q.On June 21st, you note that the family would
 19 like an autopsy if possible. Do you recall
 20 having a conversation with Mrs. Wiley's
 21 family about an autopsy on or about June
 22 21st?
 23 A. Well, if it says that the family requests,
 24 given her family request, would like autopsy
 25 if possible, I must have had a conversation.

Page 226

1 We don't do autopsies without permission.
 2 Q.Did you suggest to the family that they
 3 ought to consider an autopsy?
 4 A.I cannot recall.
 5 Q.Do you typically do that?
 6 A.If a patient's death is difficult to explain
 7 to the family, if there's questions, whether
 8 they could have changed some behavior, done
 9 something, or possibly if there's a
 10 possibility of infection, such as
 11 tuberculosis, or some type of malignancy,
 12 that the family would need for their future
 13 care, oftentimes we will suggest it to them.
 14 Q.Let me back up for a second. Your opinion
 15 that this was an adenocarcinoma primary to
 16 the lung, I may have asked you, is that an
 17 opinion that is recorded anywhere in these
 18 medical records prior to your death summary?
 19 A. Your question is -- what's your question
 20 again?
 21 Q.My question is: Where besides your death
 22 summary do you describe this tumor as a
 23 primary adenocarcinoma of the lung or where
 24 does any other doctor describe this tumor as
 25 a primary adenocarcinoma of the lung?

Page 227

1 A.Well, from Dr. Baldwin's note, the pathology
 2 report, I think you have that, it states
 3 that this fine needle aspiration, according
 4 to both him and Dr. Sandquist, was
 5 adenocarcinoma of the lung.
 6 Q.Well, adenocarcinoma found in the lung
 7 doesn't necessarily tell you that it began
 8 in the lung, does it?
 9 A.Adenocarcinoma that is found in the lung
 10 does not always begin in the lung if it's a
 11 metastatic lesion.
 12 Q.And in fact, Doctor, isn't the lung one --
 13 isn't the lung the most common place for
 14 metastatic lesions to occur?
 15 A.Oftentimes breast cancer, some other types
 16 of tumors may go to the lung. But the
 17 problem is, is that her presentation was
 18 such, especially her x-ray -- usually with
 19 metastatic lesions to the lung you will have
 20 both lungs involved. It would be awful
 21 unusual with this large of tumor mass. I
 22 mean, that would not be our working
 23 diagnosis.
 24 Q.Doctor, I don't mean to interrupt you --
 25 MR. CROSS: Then don't. Let her

Page 228

1 finish her answer.
 2 Q.My question is specific. Finish your
 3 answer, Doctor, but let me tell you this, if
 4 you would listen to my questions --
 5 A.I am listening.
 6 Q.-- I think we'd get along better and move a
 7 little faster.
 8 My question doesn't deal with
 9 Mrs. Wiley, my question deals with general
 10 medical principles, and my question to you,
 11 Aren't metastatic neoplasms to the lung the
 12 most common type of tumor found in the lung?
 13 A.I can't tell you that for sure. I'm
 14 telling -- her presentation, or whoever,
 15 okay, the presentation of a lung cancer,
 16 whether it's been Mrs. Wiley or not, with a
 17 large mass, that was an endobronchial
 18 lesion, that was not consistent with a
 19 metastatic lesion.
 20 Q.Doctor, my question to you is, yes or no,
 21 are metastatic neoplasms to the lung the
 22 most common tumor found in the lung?
 23 MR. CROSS: Asked and answered.
 24 Q.Yes, no, or I don't know?
 25 MR. CROSS: Objection.

<p style="text-align: right;">Page 229</p> <p>1 A. That may be true. It's hard to say.</p> <p>2 Q. Are carcinomas metastatic to the lung the</p> <p>3 most common subgroup of malignancies?</p> <p>4 A. Carcinomas --</p> <p>5 Q. Metastatic to the lung the most common</p> <p>6 subgroup of malignancies.</p> <p>7 A. I can't tell you that for sure. I'm not an</p> <p>8 oncologist.</p> <p>9 Q. Can virtually any malignancy spread to the</p> <p>10 lung?</p> <p>11 A. Can virtually any malignancy spread to the</p> <p>12 lung. Well, being not an oncologist and the</p> <p>13 fact that there are probably occasionally</p> <p>14 some extremely weird type of presentations,</p> <p>15 when I'm looking at chest x-rays and lung</p> <p>16 cancers, there are certain cancers that are</p> <p>17 more likely to spread to a lung than others.</p> <p>18 Q. Are the most common malignancies that spread</p> <p>19 to the lung malignancies that arise in the</p> <p>20 breast, colon, stomach, pancreas, and</p> <p>21 kidney?</p> <p>22 A. Breast, colon, stomach, pancreas, and</p> <p>23 kidney. It's possible. Again, I'm not an</p> <p>24 oncologist, but they can spread to the lung,</p> <p>25 yes.</p>	<p style="text-align: right;">Page 231</p> <p>1 lung when it's found in an endobronchial</p> <p>2 location?</p> <p>3 A. Well, since I have not seen any metastatic</p> <p>4 lesions arise from the bronchus, I can't</p> <p>5 answer your question. Metastatic lesions</p> <p>6 are usually peripheral, they're usually</p> <p>7 bilateral, they are not a large tumor mass</p> <p>8 that circumscribed in one area of the lung,</p> <p>9 that if I was looking at -- if I had blind</p> <p>10 x-rays put in front of me, I could say that</p> <p>11 this is a primary lung versus metastatic.</p> <p>12 Does that answer your question?</p> <p>13 Q. Well, Doctor, you can only answer it the</p> <p>14 best way you can answer it. All I want you</p> <p>15 to do is answer the questions. If you can't</p> <p>16 answer them, you tell me you can't answer</p> <p>17 them.</p> <p>18 A. Yes.</p> <p>19 Q. In your opinion, Doctor, or in your</p> <p>20 experience -- well, tell me whether you</p> <p>21 agree or disagree with this statement:</p> <p>22 Endobronchial metastases can be confused</p> <p>23 with centrally placed primary lung</p> <p>24 carcinomas.</p> <p>25 A. Endobronchial metastases can be confused --</p>
<p style="text-align: right;">Page 230</p> <p>1 Q. Are adenocarcinomas the most common type of</p> <p>2 extrathoracic tumor that metastasizes to the</p> <p>3 lung?</p> <p>4 A. Are adenocarcinomas the most --</p> <p>5 Q. Most common type of extrathoracic tumors</p> <p>6 that metastasize to the lung?</p> <p>7 A. Since not being an oncologist, it's</p> <p>8 possible.</p> <p>9 Q. Is it a challenge to you, as a physician, in</p> <p>10 treating an individual to determine whether</p> <p>11 a tumor that you observe in the lung is a</p> <p>12 primary or a metastatic tumor?</p> <p>13 A. Yes.</p> <p>14 Q. Can atypical presentations of metastatic</p> <p>15 disease to the lung cause confusion with</p> <p>16 primary lung cancer?</p> <p>17 A. Atypical presentations, what is your term?</p> <p>18 Define that.</p> <p>19 Q. Well, what does it mean to you? An atypical</p> <p>20 presentation?</p> <p>21 A. I don't know, I've not used that term</p> <p>22 before. An atypical presentation. If you</p> <p>23 could define it for me, I could answer it.</p> <p>24 Q. Is it more or less difficult to distinguish</p> <p>25 a primary from a metastatic cancer in the</p>	<p style="text-align: right;">Page 232</p> <p>1 Q. With centrally placed primary lung</p> <p>2 carcinomas.</p> <p>3 A. Again, you would have to, in my opinion, you</p> <p>4 would have to take the complete</p> <p>5 presentation. You would not just take the</p> <p>6 lung out and say that this is an</p> <p>7 endobronchial lesion secondary to</p> <p>8 metastasis. If the presentation is such</p> <p>9 that this is a primary lung, you diagnose it</p> <p>10 as a primary lung. If there's no other</p> <p>11 source for the adenocarcinoma, then that is</p> <p>12 not metastatic.</p> <p>13 Q. Well, how do you determine whether there may</p> <p>14 be another source for the adenocarcinoma?</p> <p>15 A. You do CT scans. You complete the</p> <p>16 evaluation of the entire patient.</p> <p>17 Q. Is adenocarcinoma a type of cancer that can</p> <p>18 arise in the largest number of organs in the</p> <p>19 body compared to small cell or squamous cell</p> <p>20 carcinoma?</p> <p>21 A. Well, small cell and squamous do arise from</p> <p>22 other organs but, again, it's the</p> <p>23 presentation. It also has to do with the</p> <p>24 pathology report. Adenocarcinomas from</p> <p>25 other sites such as breast, or pancreas,</p>

Page 233

Page 235

1 would look different to a pathologist, I
 2 would suspect, and he would have said this
 3 appears to be from some other lesion besides
 4 the lung.
 5 Q. Let me stop you right there, Doctor. Are
 6 you telling us that a pathologist can look
 7 at a tumor and determine from where in the
 8 body it arose? Well, let me make it even a
 9 clearer question.
 10 Are you telling us that a pathologist
 11 can look at an adenocarcinoma and determine
 12 where that adenocarcinoma originated?
 13 A. There are characteristics that are more
 14 likely another source than the lung.
 15 Q. What are those characteristics?
 16 A. I'm not a pathologist.
 17 Q. So you don't profess any background,
 18 education, or experience in determining
 19 whether you can look at an adenocarcinoma
 20 under the microscope and tell us from what
 21 part of the body it originated.
 22 A. From when I was in medical school and from
 23 my experience as a clinical physician, I can
 24 tell you that a pathologist can look at a
 25 slide and say these have the tendency or

Page 234

Page 236

1 characteristics that are not -- that would
 2 lend you to diagnose that this cancer came
 3 from someplace else.
 4 Q. Tell me where in Exhibit 51, that you have
 5 in front of you, the pathologist gives us
 6 any information about where that
 7 adenocarcinoma originated.
 8 A. It doesn't. Well, it does right here:
 9 "Fine needle aspiration, lung, right upper
 10 lobe: adenocarcinoma."
 11 Q. So what that tells us is that adenocarcinoma
 12 was found in the lung.
 13 A. Yes.
 14 Q. It doesn't tell us that it started in the
 15 lung.
 16 A. The fact that they did not tell you that
 17 there was probably some type of
 18 characteristic that it would have started
 19 someplace else, if I read this, I would say
 20 this is primary lung.
 21 Q. Well, Doctor, are you telling us that all
 22 you need to know is that adenocarcinoma is
 23 found in the lung to reach a reasonably
 24 certain conclusion that it's primary to the
 25 lung?

1 A. That's not what I said.
 2 Q. Then tell me what is it about that report
 3 that leads you to believe that is a primary
 4 adenocarcinoma of the lung ~~besides the fact~~
 5 that the adenocarcinoma was ~~found in the~~
 6 lung.
 7 MR. CROSS: Objection, asked and
 8 answered.
 9 A. Your question is, what about this tells me
 10 that this was primarily lung.
 11 Q. Yes. "This" being the exhibit that we
 12 referred to.
 13 A. Yes.
 14 Q. Tell me where and how from that information
 15 you can determine that that is a primary
 16 adenocarcinoma of the lung as opposed to a
 17 primary adenocarcinoma, or an adenocarcinoma
 18 that is found in the lung?
 19 A. Well, because they had a -- when a
 20 pathologist -- when a pathologist does a
 21 fine needle aspiration of a large mass,
 22 okay -- and again, not being a pathologist,
 23 I'm telling you from my opinion and my
 24 clinical experience of 20 years -- when a
 25 pathologist looks at a fine needle

1 aspiration, then it has a large mass in the
 2 lung, there is a small mass in the chest
 3 wall, okay, they look at the same -- there's
 4 a fine needle aspiration here, of the lung,
 5 they remove the mass from the chest wall.
 6 This was -- this pathology report is
 7 consistent with primary lung cancer. If I
 8 would read this, if I -- if I had another
 9 person's chart and I went through the whole
 10 chart and I looked at this piece of paper
 11 and that was with another chart, I would
 12 still say that this is a primary lung from
 13 what these people are saying.
 14 Q. Doctor, my question -- you don't have the
 15 chart, Doctor, all you have in front of
 16 you --
 17 A. Yes, I do. I have the chart in front of --
 18 here.
 19 Q. My question is if all you had in front of
 20 you was that pathology report, the fact that
 21 a pathologist found adenocarcinoma in the
 22 lung doesn't in and of itself tell you where
 23 that cancer came from, does it?
 24 A. The fact that they did not state that this
 25 most likely is some other source besides the

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 237

1 lung, this is consistent to me as primary
 2 lung cancer.
 3 Q. Doctor, my question isn't is it consistent
 4 with. My question is, could we put that on
 5 a table and you walk into a room and pick it
 6 up and not have anything else on the table
 7 and look at that piece of paper and say this
 8 is a primary adenocarcinoma of the lung?
 9 A. Yes.
 10 Q. Why?
 11 A. Because it does not state that the
 12 characteristics of the cells are anything
 13 other than primary lung cancer.
 14 Q. And it's your belief that a pathologist can
 15 look at an adenocarcinoma under the
 16 microscope and determine from where that
 17 tumor originated in the body.
 18 A. There would be characteristics that they
 19 would lend towards one organ or another, or
 20 primary lung.
 21 Q. To the extent a pathologist in this case
 22 testifies to the contrary, do you agree or
 23 disagree with that opinion?
 24 A. In this case. This patient, that's what you
 25 asked.

Page 238

1 Q. Let me give you a hypothetical. If a
 2 pathologist, someone who has background,
 3 training, who is board certified in
 4 pathology --
 5 A. Yes.
 6 Q. -- tells the jury in this case you can't
 7 look at a tumor under the microscope, you
 8 can't look at an adenocarcinoma under the
 9 microscope and determine from where in the
 10 body it started, is that an opinion with
 11 which you disagree?
 12 A. There are certain characteristics of
 13 adenocarcinoma that would allow the
 14 pathologist to make an educated guess
 15 whether that was from another source or not.
 16 Q. But are you telling us, with reasonable
 17 certainty, that you have the background, the
 18 education, the experience to look at the
 19 pathology or the pathology report in this
 20 case and tell the jury that?
 21 MR. CROSS: Well, I'm going to
 22 object.
 23 MR. OHLEMEYER: I'll withdraw the
 24 question.
 25 Q. Doctor, have you done any research on

Page 239

1 endobronchial metastases?
 2 A. Endobronchial metastases, no.
 3 Q. Have you done any research on metastatic
 4 tumors to and from the lung?
 5 A. Research?
 6 Q. Yes.
 7 A. Or reading?
 8 Q. Either.
 9 A. Research or reading? Reading I have.
 10 Research, no.
 11 Q. What have you read?
 12 A. Well, I don't have the books in front of me.
 13 It was several texts.
 14 Q. Have you read that true primary bronchial
 15 adenocarcinomas are rare and often derived
 16 from bronchial glands?
 17 A. Can I see the -- your paper?
 18 Q. My question is, Doctor, have you read true
 19 primary bronchial adenocarcinomas are rare
 20 and often derived from bronchial glands?
 21 A. True primary --
 22 Q. True primary bronchial adenocarcinomas are
 23 rare and often derived from bronchial
 24 glands.
 25 A. Bronchial glands. I can't tell you whether

Page 240

1 I've read that or not. That is, they come
 2 from adenocarcinoma. I mean, that's --
 3 Q. Is it fair to say, Doctor, that most primary
 4 lung adenocarcinomas are peripheral?
 5 A. Most primary lung adenocarcinomas are
 6 peripheral, yes.
 7 Q. Why was an autopsy conducted in this case?
 8 A. One thing, the patient's family requested
 9 it.
 10 Q. Any other reason? What would the purpose of
 11 an autopsy be in this case?
 12 A. Well, I think I've already answered. The
 13 fact that this family had questions,
 14 possibly as a cause of her death, perhaps
 15 they were concerned about whether they
 16 should have changed something earlier,
 17 you'll have to ask them what their ideas
 18 were.
 19 Q. Did Mr. Wiley ever express any frustration
 20 to you about the quality of care his wife
 21 was receiving at Ball Memorial?
 22 A. No.
 23 Q. Never had a discussion with him about that?
 24 A. No. In fact, if you look through the
 25 nurse's notes, there was a -- I can't find

Page 241

Page 243

1 them exactly right here, but towards the end
2 of her life he apparently came out of the
3 room and specifically told the nurses that
4 they were very special people and that he
5 was crying and that he really appreciated
6 their care.

7 Q. Dr. Turner, Mr. Wiley testified in this case
8 that you associated his wife's cancer with
9 her exposure to cigarette smoke on or about
10 May 30th.

11 A. May 30th. That was the day after she came
12 in.

13 Q. Do you recall telling him that if she had
14 cancer that you thought it would be
15 associated with her exposure to cigarette
16 smoke?

17 A. I do not recall that.

18 Q. Do you recall him telling you -- you recall
19 telling him that -- did you suggest to
20 Mr. Wiley that an autopsy be conducted so
21 that you could find out the real cause of
22 his wife's death?

23 A. I do not recall that if it's not in my
24 notes. I may have or have not.

25 Q. Did you ever tell Mr. Wiley that an autopsy

Page 242

1 should be performed to find the primary
2 tumor from which his wife suffered?

3 A. If he stated that in his deposition, then,
4 you know, I probably did.

5 Q. Well, do you believe or did you believe that
6 an autopsy should be performed in order to
7 find the primary tumor?

8 A. Given the fact that it was eight years ago
9 or seven years ago now, did I believe that
10 we did not have the source from what we
11 had --

12 Q. My question to you, Dr. Turner, is did you
13 believe an autopsy should be performed to
14 find the primary site of the tumor?

15 A. I can't tell you that for sure. All I know
16 is that an autopsy was performed.

17 Q. Do you think an autopsy was necessary to
18 find the primary site of the tumor?

19 A. I think an autopsy was necessary to define
20 how extensive the tumor was, yes.

21 Q. Do you think an autopsy was performed to
22 find the primary?

23 A. Well, given the fact that, from the notes
24 that I have here, and from my discharge
25 summary, we felt that her primary lung was

1 the source -- is that what you're asking?

2 Q. Let me rephrase the question. Did anyone
3 ever tell you that an autopsy was performed
4 to find the primary?

5 A. I can't tell you that for sure. It's been
6 seven years.

7 Q. Did you ever tell anyone else to perform an
8 autopsy to find the primary?

9 A. I can't tell you that. It's been seven
10 years ago. I mean, what does the autopsy
11 report -- I mean, there's a request for an
12 autopsy. If Mr. Wiley requested an autopsy
13 and if he states something then I'm sure
14 he -- but I can't -- I've taken care of too
15 many patients. I can't -- I don't want to
16 lie to you.

17 Q. Do you think an autopsy -- did you think at
18 the time of Mrs. Wiley's death an autopsy
19 was necessary to find the primary?

20 A. I can't tell you that. All I know is from
21 my notes and from the way the discharge
22 summary was written and dictated, and the
23 way I wrote the face sheet out, we had the
24 primary source.

25 Q. All right. Then explain to me, Doctor, why

Page 244

1 in your death summary you state an autopsy
2 was performed to find the primary.

3 A. Then obviously I thought this. Why didn't
4 you bring that up in the first place? Where
5 is this at?

6 Q. Last -- right there.

7 A. To find the primary. Okay. There it is.
8 Not like I'm hiding something, it's written
9 right there.

10 Q. So at the point -- as of July of 1991, there
11 was some question in your mind as to where
12 Mrs. Wiley's primary cancer might --

13 A. July 21?

14 Q. 1991.

15 A. See, the problem is -- the autopsy was
16 performed when?

17 Q. Well, Doctor, my question to you is, as of
18 July 1991 --

19 A. July 21st or when?

20 Q. As of July 21, 1991, was there any question
21 in your mind as to where Mrs. Wiley's
22 primary cancer originated?

23 A. Well --

24 Q. Or let me rephrase the question. Was there
25 any question in your mind about the primary

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 245	Page 247
<p>1 site of Mrs. Wiley's cancer?</p> <p>2 A. Well, July 21st is when I dictated the</p> <p>3 discharge summary. The autopsy was</p> <p>4 performed when?</p> <p>5 Q. Doctor, can you answer the question?</p> <p>6 A. I'm trying to answer the question. The</p> <p>7 point is, this dictation was done after the</p> <p>8 autopsy was completed. Okay? So therefore,</p> <p>9 when I dictated the discharge summary I</p> <p>10 dictated, it says, "the patient died quietly</p> <p>11 on 6/24/91 with her family at her bedside.</p> <p>12 Autopsy was performed to find the primary."</p> <p>13 Therefore, I dictated this on the 21st of</p> <p>14 July. We already knew -- I mean, the</p> <p>15 autopsy was completed. This confirmed our</p> <p>16 initial diagnosis of primary lung carcinoma.</p> <p>17 Q. Is it your testimony, Doctor, that you had</p> <p>18 the autopsy report prior to the time you</p> <p>19 dictated the death summary?</p> <p>20 A. I don't know. When was the autopsy report?</p> <p>21 Q. Mr. Cross has handed you --</p> <p>22 MR. OHLEMEYER: Quite frankly,</p> <p>23 Mr. Cross, I don't think it's proper for you</p> <p>24 to hand the witness --</p> <p>25 A. Well, you hand it to me then. How's that?</p>	<p>1 reports. Does it say when it was finally</p> <p>2 dictated? I mean, I have autopsy reports a</p> <p>3 year after they're completed.</p> <p>4 Q. So am I correct that even though the autopsy</p> <p>5 in this case was performed prior to July of</p> <p>6 '91, you may not have had and, in fact,</p> <p>7 there's no indication that you had a copy of</p> <p>8 the report prior to the time you dictated</p> <p>9 the death summary.</p> <p>10 A. If it doesn't say, then I can't tell you.</p> <p>11 Again, autopsy reports, depends on who's</p> <p>12 dictating them, are they waiting for the</p> <p>13 micro reports to come back, that takes time.</p> <p>14 And therefore, I may not have the autopsy.</p> <p>15 Or I could have had the autopsy report at</p> <p>16 the time of my dictation. I can't tell you</p> <p>17 because if it's not dictated --</p> <p>18 Q. All right.</p> <p>19 A. Can I look at that?</p> <p>20 Q. You can, but there's no question pending.</p> <p>21 A. Okay.</p> <p>22 Q. My question, my next question, Doctor, is at</p> <p>23 the time you dictated the death summary, how</p> <p>24 did you rule out primary carcinoma of the</p> <p>25 breast or primary carcinoma of the pancreas</p>
Page 246	Page 248
<p>1 MR. OHLEMEYER: -- hand the witness</p> <p>2 information while questions are pending,</p> <p>3 tell you the truth. But, be that as it</p> <p>4 may --</p> <p>5 MR. CROSS: Well, then I don't</p> <p>6 think it's fair for you to ask the witness</p> <p>7 to rely from memory hundreds of documents.</p> <p>8 MR. OHLEMEYER: I think the</p> <p>9 witness's memory is going to be -- certainly</p> <p>10 is a fair area of inquiry in this case and I</p> <p>11 prefer that you let me conduct my</p> <p>12 examination the way I want to conduct it.</p> <p>13 MR. CROSS: Well, as long as you</p> <p>14 stay within the limits of the procedure.</p> <p>15 Q. Doctor, the autopsy report is marked Exhibit</p> <p>16 16. My question to you is at the time you</p> <p>17 dictated your death summary in July of 1991,</p> <p>18 did you have a copy of the autopsy report</p> <p>19 and, if so, show me in this death summary</p> <p>20 where you refer to it.</p> <p>21 A. Does it say that I did?</p> <p>22 Q. Well, I don't see it.</p> <p>23 A. Well, then, obviously, I didn't. Or it's in</p> <p>24 the chart that -- I mean, the problem is</p> <p>25 with autopsies, the autopsy, we don't get</p>	<p>1 or primary carcinoma of the stomach or</p> <p>2 primary carcinoma of the colon metastatic to</p> <p>3 the lung?</p> <p>4 A. Number one, her breast examination was</p> <p>5 negative. She had had previous mammograms</p> <p>6 in the fall of '90, I believe, at Marion</p> <p>7 General. And I had examined her breast,</p> <p>8 Dr. Songer had examined her breast,</p> <p>9 Dr. Sprunger had examined her breast, there</p> <p>10 was no source there.</p> <p>11 Number two, the pancreas, the CT</p> <p>12 report -- and I need to look that up, but</p> <p>13 there was no evidence of a mass -- let's see</p> <p>14 here. CT of the abdomen and pelvis: The</p> <p>15 liver was within normal limits, the pancreas</p> <p>16 was not enlarged, the kidneys and spleen</p> <p>17 were normal. So the other question?</p> <p>18 Q. What are you reading from?</p> <p>19 A. The CT report on 6/3/91. And there was no</p> <p>20 evidence of thickening -- I mean, they would</p> <p>21 have stated, if there was some suspicion of</p> <p>22 something in the stomach, they would have</p> <p>23 stated something at the time.</p> <p>24 And the other thing is, she did not</p> <p>25 have any symptoms consistent with that. I</p>

Page 249

Page 251

1 mean -- I mean, her major problem, her
2 presenting chest x-ray was a hilar mass with
3 volume loss in the right lung. Usually
4 patients with pancreatic cancer present with
5 weight loss, nausea/vomiting, and abdominal
6 pain. Vague abdominal pain.

7 Q. Did Mrs. Wiley have a history of vague
8 abdominal pain?

9 A. Well, what was my H&P? She had no
10 difficulty swallowing, she did have a
11 persistent cough, she had hoarseness, she
12 had hemoptysis or streaking of blood in her
13 sputum, she denied GI upset, denied chest
14 discomfort with the exception of some
15 heaviness with severe coughing.

16 Q. Let me put it to you this way, Doctor.

17 A. Yes.

18 Q. If it's not in this admission note, you
19 don't know whether she had a history of
20 abdominal discomfort or she had prior GI
21 workups or had sigmoidoscopies or had --

22 A. She had no diarrhea, no constipation, the
23 patient denied any bowel changes, no GI
24 distress. To me that says she did not have
25 any nausea/vomiting -- not nausea/vomiting,

1 Q. You would expect somebody in Mrs. Wiley's
2 position, especially in light of her
3 background and experience as a nurse, to
4 provide you with as much detail and accurate
5 information as she could about her history.

6 A. Yes.

7 Q. You would expect that she would do that with
8 all of her doctors, wouldn't you?

9 A. If they asked the right questions.

10 Q. Well, wouldn't you expect the doctors at
11 Ball Memorial to ask the right questions?

12 A. If they were taking a complete history and
13 they were doing a thorough examination, yes.

14 Q. So is it fair to say, Doctor, that the only
15 information available to you to rule out a
16 primary from a distant site at the time you
17 dictated the death summary is the
18 information contained in the medical records
19 you've previously produced to us.

20 A. I cannot tell you for sure, yes or no,
21 whether I had the autopsy report. If I did
22 not have the autopsy report, it would have
23 been related to the pathology report and
24 what I ascertained from her tests and what
25 we found at the time of her hospitalization.

Page 250

Page 252

1 she did not have abdominal pain, she did not
2 have symptoms saying that her primary was in
3 the belly.

4 Q. Do you know if Mrs. Wiley ever had any GI
5 workups prior to the time she was admitted
6 to Ball Memorial?

7 A. If they're not in this history, not in my
8 H&P, and I don't recall them, no.

9 Q. So it's possible Mrs. Wiley had symptoms
10 that either weren't reported to you or
11 weren't included in the information
12 available to you at the time you took the
13 history.

14 A. It's possible, but usually people are pretty
15 forthcoming, they're scared to death. And
16 the other thing is, with the CT scan, if
17 that was a problem, thickening of the
18 stomach wall, a mass in the stomach, I would
19 have suspected they would have picked that
20 up on the CT scan.

21 Q. What do you mean, people are forthcoming?

22 A. That means, if you're facing death, and
23 you're concerned that you're dying, people
24 tell me things that they probably didn't
25 even tell their families.

1 Q. Now, at the time she died, Mrs. Wiley had
2 been treated for breast cancer; isn't that
3 right?

4 A. Where is that at?

5 Q. Well, did you ever -- you've talked about
6 this case with Dr. Songer, haven't you?

7 A. Not very much.

8 Q. That's your testimony?

9 A. We've discussed the case off and on.

10 Q. You know that --

11 A. But not extensively, no.

12 Q. You know that Dr. Songer did not treat
13 Mrs. Wiley with aggressive chemotherapy
14 during her hospitalization; isn't that
15 right?

16 A. Did I know that Dr. Songer did not treat
17 Mrs. Wiley with aggressive chemotherapy.

18 Q. Let me rephrase the question. What
19 treatment did Dr. Songer provide to
20 Mrs. Wiley during her hospitalization?

21 A. Well, the treatment that he provided, we
22 provided, was the fact that we started -- we
23 tried radiation, and I believe he tried --
24 let's see here. I think he was attempting
25 to see -- let's see here. He started her on

1 tamoxifen on the 10th of June.
 2 Q. What is tamoxifen?
 3 A. Tamoxifen is an antihormonal therapy.
 4 Q. What is it used to treat?
 5 A. It can be used to treat breast cancer.
 6 Q. And is that why it was prescribed in this
 7 case, because of the suspicion that
 8 Mrs. Wiley might have breast cancer?
 9 A. As you note in his chart, on the 10th of
 10 June Dr. Songer states, "Although a breast
 11 primary seems unlikely, I see no
 12 contraindication to treating patient
 13 empirically with antihormonal therapy."
 14 Q. Why don't you read the last --
 15 A. "Based on high CEA and CA15-3."
 16 Q. What does a high CEA and CA15-3 indicate to
 17 you?
 18 A. Well, I'm not an oncologist. These tests --
 19 Q. Well, it indicates to an oncologist --
 20 MR. CROSS: Let her finish the
 21 answer, please.
 22 Q. Go ahead, Doctor.
 23 A. They can be used as tumor markers.
 24 Q. For what type of tumor?
 25 A. Well, there's a number of them and there's a

1 chart in here. CEA is often elevated in a
 2 number of tumors, can -- can be related to
 3 GI, related to others. CA15-3 --
 4 Q. I don't want to interrupt you but it's most
 5 often associated with primary breast cancer;
 6 isn't it?
 7 A. CA15-3? Now it's not because it's not used
 8 anymore. That's my understanding.
 9 Q. Doctor, in 1991, the use of tamoxifen to
 10 treat a woman with an elevated level of
 11 CA15-3, I mean, why would you -- why was he
 12 treating her with tamoxifen?
 13 A. Because that's all we had left to offer her.
 14 Q. And in June of 1991, what did an elevated
 15 level of CA15-3 suggest to you as a
 16 clinician?
 17 A. Well, I'm not the oncologist.
 18 Q. What does it suggest to an oncologist then?
 19 A. That may be in the differential.
 20 Q. The differential being a primary breast.
 21 A. Yes, but it doesn't go along with her
 22 clinical presentation.
 23 Q. Well, be that as it may, Dr. Turner, all
 24 Dr. Songer did in terms of treatment is
 25 treat Mrs. Wiley with tamoxifen; right?

1 A. He was trying to help her in any way he
 2 could.
 3 Q. He did not treat her the way an oncologist
 4 typically treats someone with adenocarcinoma
 5 of the lung.
 6 A. Well, since this was the 10th and we didn't
 7 know she had adenocarcinoma until the 14th,
 8 this was started four days before. From the
 9 type of presentation and the level, where we
 10 were on the 10th of June, he was just trying
 11 to do anything possible for this poor lady.
 12 Q. But he never treated her --
 13 A. And the problem is, I mean, tamoxifen, he
 14 was trying to do anything that he could
 15 without causing her harm.
 16 Q. But did Dr. Songer ever treat Mrs. Wiley for
 17 adenocarcinoma of the lung?
 18 A. No.
 19 Q. And what he did treat her --
 20 A. Yes, he did in a way, because of the
 21 radiation.
 22 Q. Well, you're smiling, you scored a point.
 23 A. No. Don't talk like that.
 24 Q. I apologize.
 25 Dr. Turner, what he did do is treat her

1 with a drug that is and was typically used
 2 to treat women with primary carcinoma of the
 3 breast.
 4 A. Yes. But that doesn't mean -- oftentimes we
 5 have a patient that will present and we
 6 don't have the diagnosis, the patient is
 7 deteriorating, and we do what we can to
 8 do -- the best we can with the information
 9 that we have.
 10 Q. And the information that you had was that
 11 Mrs. Wiley had an elevated marker that was
 12 associated with primary carcinoma of the
 13 breast.
 14 A. Yes.
 15 Q. Okay. Now, let me make sure we're not
 16 confused about something. The radiation
 17 treatment had nothing to do with
 18 Mrs. Wiley's lung, did it?
 19 A. Yes, it had everything to do -- well, it had
 20 to do -- we were radiating.
 21 Q. Let me rephrase the question. There was no
 22 radiation directed to the lung.
 23 A. No.
 24 Q. It was directed to the metastasized -- or to
 25 the tumors that were observed in other parts

Page 257

1 of her body.
 2 A. It was directed, if I'm not mistaken here --
 3 I'll have to look at Dr. Dickerson's
 4 notes -- but it was directed to the lumbar
 5 spine because she was having so much pain.
 6 Q. Do you know whether there were --
 7 A. She had radiation palliative. Radiation
 8 therapy to L-1 through 3.
 9 Q. That's not the lung; right?
 10 A. No. And mid-right femur.
 11 Q. That's not the lung; right?
 12 A. Right. Because the tumor was eating away
 13 her bone and that's where she was having the
 14 most pain.
 15 Q. So there was no radiation directed to her
 16 lung; right?
 17 A. Not at that point, no.
 18 Q. There was no chemotherapy directed to --
 19 prescribed because of a diagnosis of
 20 adenocarcinoma.
 21 A. We ran out of time.
 22 Q. And the only treatment that was prescribed
 23 is a treatment that is consistent with or
 24 typical of the way you treat a woman with
 25 primary carcinoma of the breast.

Page 258

1 A. No. That's not true. We treated --
 2 Dr. Songer started tamoxifen because of the
 3 elevated tumor markers.
 4 Q. Is tamoxifen used to treat people with lung
 5 cancer?
 6 A. No.
 7 Q. Okay. Doctor --
 8 A. But let me finish my statement. What you
 9 said was the treatment -- did we treat the
 10 patient with -- for her lung cancer. We did
 11 not at that point. We did treat with
 12 radiation. And you notice that what we're
 13 doing, here's this poor lady, she has
 14 elevated markers, even though her breast
 15 examination is negative, even though she had
 16 a negative mammogram, we felt that's all we
 17 could offer her. The radiation was to be
 18 treating the femur as well as L-1 through 3
 19 because the bones were being eaten away. So
 20 we were essentially trying to treat
 21 whatever -- whatever cancer was present.
 22 Q. Doctor, after Mrs. Wiley died, how did you
 23 get involved in her claim, her husband's
 24 claim for compensation?
 25 A. Well, I received a letter -- I don't have --

Page 259

1 if it's here, I'd have to find it --
 2 requesting that I give my opinion as to the
 3 cause of her death.
 4 Q. And in your opinion, her death was related
 5 to her employment at the VA.
 6 A. In my opinion, her death was related to
 7 environmental tobacco smoke.
 8 Q. Well, let's back up. From whom did you
 9 receive the letter?
 10 A. I must have received it from the attorneys.
 11 I don't know for sure. I don't know where I
 12 got it from. Does it say where I received
 13 it from?
 14 Q. Doctor, I don't -- if you have a letter, if
 15 you have a letter, I'd be happy to talk with
 16 you about it, but --
 17 A. Well, I don't know either.
 18 Q. So you recall receiving a letter from
 19 somebody. Is that right?
 20 A. I'm stating that I was contacted. And if it
 21 was by letter, I'd have to find it in these
 22 papers.
 23 Q. Which, if it was attorneys, which attorneys?
 24 A. Well, if I could find the letter I would
 25 tell you that.

Page 260

1 MR. OHLEMEYER: Let's mark this as
 2 the next exhibit.
 3 (Deposition Exhibit(s) 18 marked for
 4 identification.)
 5 Q. Doctor, let me hand you what we've marked as
 6 Exhibit 18, and ask you, it's a handwritten
 7 note that has 1716 West 10th, Jonesboro,
 8 Indiana 46938, Philip, and then it says
 9 "pursue lawsuit for VA" underlined, "for
 10 VA," three times, "help any way can," and
 11 then it says, what? What's that last word
 12 down there?
 13 A. I can't read it.
 14 Q. Is it your writing?
 15 A. No, it's not.
 16 Q. Whose writing is it? Do you recognize it?
 17 A. No. It's probably one of the secretaries.
 18 Q. So is this --
 19 A. I'm not sure it's the secretaries but it's
 20 not my writing.
 21 Q. This is a document that you have produced to
 22 us. Can you explain it for us?
 23 A. All I know is, most likely it's related to
 24 the fact that I was requested to look at the
 25 evidence and see if there was enough

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 261

1 evidence or if the evidence was adequate to
 2 pursue legal actions.
 3 Q. And does it suggest to you who made that
 4 request of you?
 5 A. No. I mean, whoever wrote this, whoever
 6 wrote this, help any way can. I can't read
 7 the last writing. The last word.
 8 Q. Is this something you could show your
 9 secretary maybe on the break and see if it's
 10 her handwriting?
 11 A. We could find out and see if it's Sylvia's
 12 or someone else's. I'm not even sure the
 13 date this was written.
 14 Q. Did there come a time, Dr. Turner, where you
 15 suggested to either Mr. Wiley or his
 16 attorneys that they should file a lawsuit
 17 against the tobacco companies?
 18 A. I believe when she died, after she died, the
 19 family was crying and very, very upset and
 20 we had -- my concern was before, because of
 21 her exposure, that they should consider this
 22 because I felt that her death was directly
 23 attributed to secondhand smoke.
 24 Q. And this was at or near the time she died.
 25 A. Yes.

Page 262

1 Q. So did you suggest to them at that time to
 2 hire lawyers?
 3 A. I don't believe I did. If I did, I did.
 4 Q. Did you ever help them hire lawyers --
 5 A. No.
 6 Q. -- or assist them in any way?
 7 A. No. Are you kidding?
 8 MR. OHLEMEYER: Let me mark as
 9 Exhibit 19 next in order.
 10 (Deposition Exhibit(s) 19 marked for
 11 identification.)
 12 Q. Doctor, I've handed you what we've marked as
 13 Exhibit 19. It says "Wiley, Mildred, May 3,
 14 1993." On the bottom it says "NCT:dh."
 15 This is your dictation.
 16 A. Yes.
 17 Q. First sentence, "On May 3 I discussed this
 18 case with J.L. Repace." By "case," do you
 19 mean medical case or legal case?
 20 A. Probably both.
 21 Q. Do you know whether a lawsuit had been filed
 22 at this point in time?
 23 A. No. I don't believe it had. I don't know
 24 for sure.
 25 Q. Who is J.L. Repace and why did you call J.L.

Page 263

1 Repace?
 2 A. I was contacted to see if there was
 3 sufficient evidence or sufficient cause and
 4 was I sure of the diagnosis. And I was sure
 5 of the diagnosis and, after reviewing the
 6 chart, because, obviously, it had been two
 7 years, and I had, truthfully, I had not
 8 reviewed the literature, any of the cases,
 9 and they asked me to look at that and to see
 10 if I could get other opinions to see what
 11 their thoughts were regarding this case.
 12 Q. Who is they?
 13 A. The attorneys.
 14 Q. Who?
 15 A. The attorneys. Young.
 16 Q. So it's your testimony that prior to May 3,
 17 1993, you had talked with Attorneys Young --
 18 A. Yes.
 19 Q. -- and others about, about what? About
 20 Mrs. Wiley?
 21 A. First of all, apparently what happened was
 22 they had been contacted by her husband --
 23 and that happens to me sometimes. I will be
 24 called by an attorney, a group of attorneys
 25 to look at a case, to see what my thoughts

Page 264

1 were, was it malpractice, was this -- was
 2 there liability involved, and that's what I
 3 was doing.
 4 Q. You certainly didn't think there was any
 5 malpractice involved.
 6 A. On our part, no.
 7 Q. So who is Repace? Why did you call him?
 8 A. Repace was an individual -- I'd have to look
 9 at the literature, but he has a -- he has
 10 done work for the Environmental Protection
 11 Agency, my understanding -- I have to look
 12 at the literature again to review this --
 13 but he has done work for the Environmental
 14 Protection Agency and his name was on some
 15 literature that I had read regarding
 16 environmental tobacco smoke.
 17 Q. And it appears that he told you at least
 18 three things. One thing he told you was
 19 that this was a good case. Meaning a good
 20 legal case; right?
 21 A. That this was a case for environmental
 22 tobacco smoke as a causative etiology of her
 23 cancer.
 24 Q. Well, at this point in time, the reason
 25 you're interested in that has to do with

Page 265

1 legal proceedings, not medical proceedings.
 2 A. Not really. My purpose was to see if her
 3 case was the -- if her cause of death was
 4 related to environmental tobacco smoke. I
 5 mean, happens --
 6 Q. In connection with legal proceedings.
 7 A. And -- yes.
 8 Q. So the next thing you did, or the next thing
 9 he told you was you should call a
 10 Dr. Richard Daynard at a law school; right?
 11 A. Yes.
 12 Q. Do you know who Dr. Daynard is?
 13 A. Yes.
 14 Q. Who is he?
 15 A. He's an attorney that, I believe he resides
 16 at the Northeastern School of Law in Boston
 17 and he helps individuals who feel that --
 18 and he does -- I'm not sure all the things
 19 he does, but I have read some of his
 20 literature. And I don't know if it was
 21 before or after this, I have attended
 22 lectures by him.
 23 Q. On?
 24 A. On tobacco.
 25 Q. Lawsuits against tobacco companies?

Page 266

1 A. On tobacco.
 2 Q. Well --
 3 A. He appears at symposiums on educating
 4 physicians as well as others about tobacco.
 5 Q. Well, how much continuing medical education
 6 do you typically obtain from lawyers?
 7 A. Well, it's interesting because that is
 8 probably one of the only attorneys that I
 9 have heard. Maybe there's a couple more,
 10 but I can't remember their names, that I
 11 have went to national conferences and heard
 12 speak.
 13 Q. And do you know what Dr., or Attorney
 14 Daynard believes the role of these types of
 15 lawsuits plays in the broader public health
 16 issues related to smoking and health?
 17 A. You'd have to ask him directly to see what
 18 his opinion is.
 19 Q. What's your understanding of his opinion?
 20 A. All I know is, is that he publishes. And I
 21 don't really know how long Tobacco On Trial
 22 has been out, I have no idea, but he
 23 publishes information regarding the tobacco
 24 industry and their liabilities and what they
 25 do to the public.

Page 267

1 Q. In lawsuits. Their liabilities in lawsuits.
 2 Right?
 3 A. I don't know about lawsuits. Their
 4 liability in the health problems brought on
 5 by their products.
 6 Q. Well, you know, if -- tell me where, what
 7 sources of information you go to for medical
 8 information about the health effects of
 9 smoking.
 10 A. Well, I can go get them if you like. I
 11 have --
 12 Q. Just give me a general --
 13 A. I have a number. I think it's in most of
 14 the textbooks.
 15 Q. Medical textbooks?
 16 A. Yes.
 17 Q. Medical journals?
 18 A. Yes.
 19 Q. Tobacco On Trial?
 20 A. Yes. Well, I don't know. A lot -- part of
 21 that -- a lot of it has to do with public
 22 access to smoke-free buildings, things like
 23 that. Also signs and -- I mean, that covers
 24 a lot of gamut. I mean, a lot of area that
 25 that literature covers, Tobacco On Trial.

Page 268

1 Q. And you just take Dr. Daynard's -- Attorney
 2 Daynard's word for it on the factual issues
 3 described in his publication; right?
 4 A. Do I take his word for it?
 5 Q. I mean, how do you know what he's telling
 6 you is accurate?
 7 A. Well, just like any other literature, I
 8 would expect if he -- if someone -- if you
 9 were writing a paper and you were going to
 10 be published nationally, or internationally,
 11 I would hope that you would be truthful.
 12 Q. Well, in a medical journal, they do more
 13 than hope, don't they? They peer review.
 14 A. Yes.
 15 Q. Do you know if Dr. Daynard's or Attorney
 16 Daynard's Tobacco On Trial is peer reviewed?
 17 A. I do not know.
 18 Q. Do you know what effort he makes to be
 19 truthful or be accurate or provide you with
 20 complete information?
 21 A. Well, a number of articles that I have read
 22 from him are also similar to articles about
 23 the same subjects by other authors, so I
 24 can't imagine -- I mean, if you read from
 25 Daynard and you read the same thing from

Page 269	Page 271
<p>1 five or six other sources, including the</p> <p>2 medical literature, I would think that would</p> <p>3 be truthful and that would be --</p> <p>4 Q. So if you repeat it enough, it's the truth.</p> <p>5 A. No, that's not true. I mean, look at you</p> <p>6 guys.</p> <p>7 Q. Let me ask you the next question:</p> <p>8 Dr. Repace told you something else, didn't</p> <p>9 he? Told you you could quantify</p> <p>10 Mrs. Wiley's exposure?</p> <p>11 A. Said he would be able to quantify hopefully</p> <p>12 the exposure Mrs. Wiley had to secondhand</p> <p>13 smoke.</p> <p>14 Q. And he couldn't, could he?</p> <p>15 A. I don't know.</p> <p>16 Q. He didn't, did he?</p> <p>17 A. No, I don't know.</p> <p>18 Q. Well, what did you mean, you don't know?</p> <p>19 Did you ever ask him did you?</p> <p>20 A. I haven't talked to the man for I don't know</p> <p>21 how long.</p> <p>22 Q. Do you know if -- did you ever recommend to</p> <p>23 the attorneys or anyone else that some</p> <p>24 effort be made to quantify her exposure to</p> <p>25 secondhand smoke?</p>	<p>4 been exposed to secondhand smoke on the VA</p> <p>2 ward and --</p> <p>3 Q. Well, I don't want to interrupt you but your</p> <p>4 history says she had been exposed to</p> <p>5 secondhand smoke for approximately 12 years</p> <p>6 in VA.</p> <p>7 A. 12 years, yes.</p> <p>8 Q. Did Dr. Repace tell you that it would be</p> <p>9 important or helpful to try to quantify that</p> <p>10 exposure in order to determine whether or if</p> <p>11 the exposure played a role in causing her</p> <p>12 disease?</p> <p>13 A. I think it would be helpful from a legal</p> <p>14 point of view. The other thing that you</p> <p>15 must look at is one of my other dictations</p> <p>16 is the fact that after additional --</p> <p>17 Q. Doctor, we'll get to that.</p> <p>18 MR. CROSS: Let her finish her</p> <p>19 answer.</p> <p>20 MR. OHLEMEYER: Well, she's</p> <p>21 answered the question. Now she's --</p> <p>22 A. What you're doing is you're picking pieces</p> <p>23 from other things instead of looking at the</p> <p>24 big picture.</p> <p>25 Q. Doctor --</p>
Page 270	Page 272
<p>1 A. I may have.</p> <p>2 Q. Well, who? Who did you tell?</p> <p>3 A. I may have talked to the attorneys.</p> <p>4 Q. Did they ever tell you what happened?</p> <p>5 Aren't you curious?</p> <p>6 A. No. What I did tell them is what I had from</p> <p>7 the history, that she had been heavily</p> <p>8 exposed to secondhand smoke, that she had</p> <p>9 worked there a number of years.</p> <p>10 Q. Well, Doctor, wouldn't it be important to</p> <p>11 determine Mrs. Wiley's exposure to</p> <p>12 secondhand smoke in determining whether or</p> <p>13 if her exposure was the cause of her</p> <p>14 disease?</p> <p>15 A. Would it be determined --</p> <p>16 Q. Would it be important to determine --</p> <p>17 A. To determine the quantity.</p> <p>18 Q. -- the quantity of her exposure, the level</p> <p>19 of her exposure if you wanted to determine</p> <p>20 whether or if that exposure played a role in</p> <p>21 causing her disease?</p> <p>22 A. Well, from her history, she stated -- and I</p> <p>23 think when I talked to her husband, and from</p> <p>24 my dictation on the death summary, that her</p> <p>25 exposure was quite heavy. I mean, she had</p>	<p>1 A. I know that's your prerogative.</p> <p>2 Q. We're going a step at a time and, quite</p> <p>3 honestly, I understand you're trying to be</p> <p>4 helpful but if we go a step at a time we'll</p> <p>5 get there a lot faster.</p> <p>6 And my question was, Is did Dr. Repace</p> <p>7 tell you that it would be helpful or</p> <p>8 important to try to quantify that exposure</p> <p>9 in order to determine whether it played any</p> <p>10 role in causing her disease?</p> <p>11 A. Well, I'll tell you, all that's written down</p> <p>12 here is what I can tell you what he told me.</p> <p>13 He did state that he would be able to</p> <p>14 quantify hopefully the exposure that</p> <p>15 Mrs. Wiley had to secondhand smoke. Whether</p> <p>16 he did or not, I cannot tell you.</p> <p>17 Q. What would the purpose of such a</p> <p>18 quantification be?</p> <p>19 A. To see how much she was exposed to.</p> <p>20 Q. Is there a level of exposure below which you</p> <p>21 wouldn't consider it to have played a role</p> <p>22 in the cause of her disease?</p> <p>23 A. My understanding, according to the federal</p> <p>24 agencies that I've read and some of the</p> <p>25 surgeons general, there's no safe exposure</p>

Page 273

1 to secondhand smoke.
 2 Q. So if Mrs. Wiley was exposed to secondhand
 3 smoke on one day of her employment at VA,
 4 would you still believe with reasonable
 5 certainty that exposure caused her lung
 6 cancer?
 7 A. Most likely not.
 8 Q. Some point between one day and 12 years I
 9 take it you believe that the exposure did
 10 cause or contribute to causing the disease.
 11 What I want to know is where. Where do you
 12 draw that line?
 13 A. I don't know. It has to do with the person.
 14 An alcoholic, if he drinks four beers a day,
 15 would that cause his liver cirrhosis? I
 16 can't tell you that. If somebody else drank
 17 six beers a day, they had or had not, it
 18 depends on their biochemical makeup. It
 19 depends on them.
 20 Q. Well, do you think that if you could
 21 quantify her exposure, it could be compared
 22 to other exposures that had been established
 23 or demonstrated to produce a cause and
 24 effect relationship? I mean, is that one of
 25 the reasons why you'd want to quantify the

Page 274

1 exposure?
 2 A. If they were able to quantify the exposure,
 3 that would -- I guess that would help. What
 4 he said is that would help with if there was
 5 a lawsuit or whatever.
 6 Q. Would another way of comparing or
 7 considering the issue be to look at groups
 8 of people who had been studied in
 9 epidemiological studies to see what level of
 10 exposure they had, what the incidence of
 11 disease was, and then compare that to
 12 Mrs. Wiley?
 13 A. I don't know if you can say that or not.
 14 I'm not an epidemiologist.
 15 Q. Well, let's put it this way: If I had a
 16 group of nonsmoking women who I studied, and
 17 I knew that they had not been exposed to
 18 environmental tobacco smoke as children or
 19 outside the workplace, and I knew how long
 20 they were exposed in the workplace, and I
 21 knew how frequently lung cancer occurred in
 22 that group of women, that would provide me
 23 some information I could use to compare and
 24 contrast to other women to see whether they
 25 were or were not being exposed to something

Page 275

1 at a level that was associated with an
 2 increased incidence of disease; right?
 3 A. Yes.
 4 Q. That would be one way of trying to quantify
 5 Mrs. Wiley's situation, wouldn't it?
 6 Comparing her to a group of people who had
 7 been studied in other situations?
 8 A. If the exposure was the same, it's possible.
 9 The thing is that, again, it has to do with
 10 biochemical makeup as well.
 11 Q. Well, another way to do it would be to
 12 quantify the exposure in her actual
 13 workplace.
 14 A. Yes.
 15 Q. Another way to do it, I guess, would be to
 16 conduct some sort of analysis of
 17 Mrs. Wiley's body to determine whether or if
 18 she had been exposed to cigarette smoke.
 19 A. Analysis of her body. In what way?
 20 Q. Well, is there a way to test somebody --
 21 let's back up.
 22 If I came to you with an occupational
 23 history of exposure to asbestos, and I died,
 24 and you were suspicious of my history, you
 25 didn't believe me, you could conduct an

Page 276

1 analysis of my lung tissue --
 2 A. Yes.
 3 Q. -- to determine how much asbestos was there.
 4 A. Yes.
 5 Q. And you could compare it to other
 6 researchers' work that says in people who
 7 work for this many years around this much
 8 asbestos you find this much; right?
 9 Can you do something like that with
 10 somebody who claims to have been exposed to
 11 cigarette smoke?
 12 A. You can look at the most likely diagnosis of
 13 cancer, which is what we did. And you're
 14 asking -- what other type of chemical
 15 analysis are you looking at? Well.
 16 Q. That's my question. Is there anything else
 17 you can do besides diagnose cancer? Is
 18 there any sort of biomarker or pathological
 19 finding that you can look for in somebody
 20 like Mrs. Wiley and say, okay, without
 21 knowing anything more about his or her
 22 history, this suggests to me this person had
 23 a prior exposure to tobacco smoke.
 24 A. I believe there are some cellular markers
 25 now available or was then, I don't know,

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 277

1 that would help you define whether that the
2 thousands of chemicals that come off of
3 cigarette smoke, side-stream smoke, some of
4 those chemicals are carcinogenic. In fact,
5 there's over 50 out of one cigarette. That
6 there may be -- there was, I believe, or
7 there is some markers that can be completed.
8 Q. We don't have any of that in this case,
9 though; right?
10 A. I don't know if we do or not.
11 Q. Well, have you looked?
12 A. We don't -- I have not looked. I'm not --
13 I'm only -- the only opinion I have is from
14 here, plus my clinical opinion. I am not a
15 lawyer.
16 Q. Now, did Dr. Repace tell you whether it
17 would be very important to look at radon
18 exposure as well from the home?
19 A. Well, there's an increased risk of cancer,
20 especially in cigarette smokers, if they
21 have radon exposure.
22 Q. Well, let's back up. Does the EPA classify
23 radon as a group A carcinogen?
24 A. Yes.
25 Q. A known human carcinogen?

Page 278

1 A. Yes. As they do other things. Including
2 ETS, including asbestos.
3 Q. Including other substances that we
4 encounter? There are things in the air we
5 breathe, in the water we drink; right? Some
6 of the foods we eat.
7 A. There are six. Vinyl chloride, I believe.
8 I'd have to look at the list. Asbestos,
9 radon, vinyl chloride, I believe benzene.
10 Q. Is there a safe level of radon exposure
11 under which there is no increased risk of
12 developing lung cancer?
13 A. It depends on where they live, whether they
14 live in the basement, what kind of radon is
15 occurring from the soil. Is there a safe
16 exposure? I mean, I believe that a -- I'm
17 not a physicist, but I believe that there is
18 radon and some areas have higher radon loads
19 than others.
20 Q. Doctor, my question is --
21 A. Is there a safe exposure.
22 Q. -- is there a safe level of exposure to
23 radon.
24 A. I can't tell you for certain. I believe
25 that under a certain level there is less

Page 279

1 likely chance of lung cancer. I mean, I
2 would not like to be exposed to any of it.
3 If that's what your question is.
4 Q. And the EPA believes and has written that
5 any exposure to radon can increase your risk
6 for developing lung cancer and, in fact, may
7 cause lung cancer in such an individual. Is
8 that right?
9 A. The EPA has written that it does increase
10 your risk of lung cancer, especially if
11 you're a cigarette smoker.
12 Q. Well, Doctor, is radon the second leading
13 cause of lung cancer in this country?
14 A. Second leading cause, I believe it is. I'd
15 have to look at my notes.
16 Q. Does radon cause thousands of deaths each
17 year?
18 A. No, I don't think so. I would have to look
19 at my notes again.
20 Q. Notes of what?
21 A. I've done research. You told me to be
22 prepared. I'm trying to be prepared.
23 Q. Well, you're referring to some notes. When
24 did you do this research?
25 A. I've been doing this research for probably,

Page 280

1 well, 16 years.
2 Q. Well, can you tell me whether or if the EPA
3 believes that radon causes thousands of
4 deaths each year in this country?
5 A. I can't tell you specifically how many
6 deaths are due to radon. But it's much,
7 much, much, much, much less than
8 environmental tobacco smoke.
9 Q. Pardon me?
10 A. I said it's much less than environmental
11 tobacco smoke.
12 Q. Your testimony, Doctor, is that the EPA
13 attributes fewer lung cancer cases each year
14 to radon exposure --
15 A. You said deaths.
16 Q. Well, let's back up then. Is it your
17 testimony that the EPA attributes
18 residential radon exposure to fewer cases of
19 lung cancer each year than exposure to
20 environmental tobacco smoke?
21 A. I can't tell you that answer.
22 Q. Do you know how many lung cancer deaths per
23 year the EPA attributes to ETS?
24 A. About -- it's below -- I believe less than
25 3,000.

Page 281

1 Q. So I want to make sure we're clear, Doctor.
 2 Your testimony is that the EPA attributes
 3 fewer than 3,000 lung cancer deaths a year
 4 to exposure to residential radon.
 5 A. Yes.
 6 Q. Do you know whether radon is found
 7 throughout Indiana?
 8 A. No, I do not.
 9 Q. Do you know whether the EPA has ever done
 10 any study of Indiana, specifically Indiana
 11 counties to determine the average amount of
 12 indoor radon that might be found in a home
 13 in Indiana?
 14 A. I can't tell you that.
 15 Q. Do you know -- well, as of May 1993 what did
 16 you know about Mrs. Wiley's exposure to
 17 radon?
 18 A. Well, since that note stated that it would
 19 be important to know that, obviously May 3rd
 20 of '93 I had no awareness of whether she was
 21 exposed to radon or not.
 22 Q. So Doctor, did Dr. Repace tell you that
 23 radon exposure was believed to be a cause of
 24 lung cancer in nonsmokers?
 25 A. It can occur. Did Dr. Repace tell me

Page 282

1 that --
 2 Q. Did you know that before May of 1993?
 3 A. I can't tell you that. I mean, we all know
 4 that radon can cause lung cancer.
 5 Especially in cigarette smokers.
 6 Q. But Mrs. Wiley wasn't a cigarette smoker.
 7 A. Right.
 8 Q. Did you know in May 1993 that radon
 9 exposure, residential radon exposure was a
 10 cause of lung cancer in nonsmokers?
 11 A. Probably, yes.
 12 Q. And did you know that in July of '91 when
 13 you dictated your death summary in this
 14 case?
 15 A. Probably, yes.
 16 Q. And what effort did you make prior to May of
 17 1993 to determine whether or if Mrs. Wiley
 18 had a residential exposure to radon?
 19 A. I didn't make any effort. Because that is
 20 so low on the probabilities that I didn't
 21 pursue that.
 22 Q. Low on the probabilities, explain that.
 23 A. That that was the primary cause of her lung
 24 cancer.
 25 Q. Why is it low on the probabilities?

Page 283

1 A. Primarily because, first of all, it's --
 2 very, very few people, nonsmokers, die of
 3 lung cancer secondary to radon. Second of
 4 all, with her presentation of an
 5 endobronchial lesion, I mean, it's just not
 6 very frequently seen. I mean, if you look
 7 at statistics, doesn't -- you know.
 8 Q. Well, prior to July of 1991, how often had
 9 you seen an endobronchial lesion in an
 10 nonsmoker?
 11 A. I had not.
 12 Q. Now, you talked with Dr. -- with Attorney
 13 Daynard about the fact that we are short on
 14 funds.
 15 A. Yes.
 16 Q. Explain that sentence to me.
 17 A. Where is that at?
 18 Q. Who is we?
 19 A. Well, we are short on funds, most law firms,
 20 if they're going to take such a case, would
 21 take it on a contingency fee.
 22 I would suspect that it was whoever was
 23 asking me if my opinion -- they were asking
 24 me my opinion whether this would be a case
 25 or not, and I would suspect I was probably

Page 284

1 talking in generalities.
 2 Q. Well, who is we generally as you use the
 3 word?
 4 A. I would suspect, given -- and truthfully,
 5 given the tobacco money that you guys have,
 6 billions of dollars that you make, and the
 7 way that lawsuits are done, that an
 8 individual -- and again, I had not talked to
 9 Mr. Wiley since the day she died, that I'm
 10 aware of; if I did I can't remember -- that
 11 if, indeed, there was a lawsuit that he was
 12 talking about that it was him.
 13 Q. Doctor, my question to you is, in this
 14 sentence, one, two, three, four, five
 15 paragraphs down, who are you referring to as
 16 we?
 17 A. That's what I just answered to you. It's
 18 probably Mr. Wiley.
 19 Q. And Attorney Daynard recommended you talk to
 20 a Dr. David Burns in San Diego. Is that
 21 right?
 22 A. If that's what it says, that's what I said.
 23 Q. And what did you know about Dr. Burns at
 24 that time?
 25 A. Nothing.

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 285	Page 287
<p>1 Q. Did Dr. Daynard tell you that he typically 2 testifies in lawsuits like this? 3 A. Dr. David Burns in San Diego is one of the 4 chief scientific authors of the EPA report 5 and has done extensive research in this 6 area. That's what it says. It says that he 7 is a chief scientific author of EPA. 8 Whether he -- whether he testified or not, I 9 can't tell you. If it doesn't say that, I 10 can't tell you. 11 Q. And then it says you discussed the case with 12 Tom Brown. Is that a typo? Is that Tom 13 Young? 14 A. Probably, yes. 15 Q. "He and his brother are willing to go ahead 16 with the case." Explain that sentence to 17 me. 18 A. "He and his brother are willing to go ahead 19 with the case." Mr. Tom Young. I guess 20 what it says is what it says. He and his 21 brother are willing to go ahead with the 22 case. 23 Q. At this point in time do you know whether a 24 lawsuit had been filed against cigarette 25 companies?</p>	<p>1 cause of Mrs. Wiley's cancer is, in essence, 2 a judgment based on some observations, some 3 facts, and some assumptions; isn't that fair 4 to say? 5 A. No assumptions. On facts and clinical 6 presentation. 7 Q. Well, you have to assume, Doctor, do you 8 not, that Mrs. Wiley was exposed to a 9 certain amount of environmental tobacco 10 smoke at the VA. 11 A. Do I have to assume that? They told me that 12 it was the fact. Yes. 13 Q. But so that's an assumption. You have to 14 assume that to be true. 15 A. If they told me that was the case, that was 16 the case. 17 Q. Well, but you have no way of knowing whether 18 she was or was not exposed or to how much 19 she was exposed beyond what you've been 20 told. Right? 21 A. The family told me, or Mrs. Wiley told me 22 how much she was exposed. The family told 23 me how much she was exposed. 24 Q. And you -- 25 A. And I have to take for granted that is the</p>
Page 286	Page 288
<p>1 A. This lawsuit or other lawsuits? 2 Q. This lawsuit. 3 A. No. 4 Q. Did you call Mr. Young, Attorney Young, for 5 the purpose of trying to persuade he and his 6 brother to file this lawsuit? 7 A. No. 8 Q. Then what was the point of calling Mr. Young 9 on May 3, 1993? 10 A. The point is that they were asking me 11 whether my -- whether my review of the 12 literature and review of this case was 13 strong enough that it would withstand -- and 14 try to get as much information as possible 15 from other individuals that it would 16 withstand -- 17 Q. A critical analysis? 18 A. Yeah. Yes. 19 Q. You don't -- I don't mean this facetiously, 20 I don't mean it disrespectfully. You 21 certainly don't think it's inappropriate for 22 your opinions to be critically analyzed in 23 this case, do you? 24 A. No. 25 Q. Do you think -- and your opinion about the</p>	<p>1 truth. 2 Q. And you wouldn't define that as an 3 assumption? 4 A. An assumption to me means I'm assuming 5 something that may or may not be true. 6 Q. Well, that's my question to you: How do you 7 know what they have told you is true? 8 A. Because I can't imagine that these people, 9 knowing that she's critically ill, knowing 10 that she's in horrible, horrible pain, 11 knowing that they came over here because 12 they were concerned that she, you know, she 13 was in -- they did not have a diagnosis, 14 they did not know what was eating away at 15 her bones, told tell me an untruth. 16 Q. How do you know what they told you is 17 complete? 18 A. Because most people, when they are in this 19 situation, if not all people -- I can't 20 imagine -- people tell me they have AIDS, 21 they tell me that they have -- doing other 22 things that their families don't even know 23 they're doing. I can't imagine, in a 24 situation like this, that someone would tell 25 a physician something as incomplete or, to</p>

Page 289

1 their knowledge, as complete as possible.
 2 Q. Well, you know for a fact, do you not,
 3 Doctor, that they did not tell you that
 4 Mrs. Wiley may have been exposed to radon in
 5 any of her homes.
 6 A. They did not give that to me when I made the
 7 diagnosis, no.
 8 Q. And you know for a fact, do you not, Doctor,
 9 that radon, the presence of radon was
 10 detected in Mrs. Wiley's home after her
 11 death, after May of 1993.
 12 A. What's your question now?
 13 Q. Well, do you know for a fact that the
 14 presence of radon was detected in
 15 Mrs. Wiley's home after her death, after
 16 June -- or after May of 1993?
 17 A. I do not know that that has been detected.
 18 Q. All right. So as we sit here today, you
 19 have no information about whether or if
 20 Mrs. Wiley may have been exposed to radon in
 21 her home or beyond what you were told or not
 22 told about it. Let me rephrase the
 23 question.
 24 Do you have any information about the
 25 presence of radon in Mrs. Wiley's homes?

Page 290

1 A. My understanding, after discussing it, that
 2 we were going to check. And by hearsay my
 3 understanding was that there was no radon
 4 found.
 5 Q. Okay. So we, after discussing it with
 6 Dr. Repace --
 7 A. Yes.
 8 Q. -- you suggested to we, being the lawyers --
 9 A. Yes.
 10 Q. -- that they should check to see if there's
 11 radon in the home?
 12 A. Yes.
 13 Q. And they told you there was not.
 14 A. My understanding, later on -- my
 15 understanding is they were going to check.
 16 And my understanding, later on, that there
 17 was no radon found.
 18 Q. Okay. Because if there was radon found,
 19 that might affect your opinion or -- well,
 20 your opinion about the cause of her disease.
 21 A. Would it affect it?
 22 Q. Might it affect it?
 23 A. Might have affected it? Given the numbers
 24 involved with radon deaths and given the
 25 numbers with environmental tobacco smoke, it

Page 291

1 would be, you know, an endobronchial lesion
 2 like this, I still would be of an opinion
 3 that environmental tobacco smoke most likely
 4 is the cause, even, you know --
 5 Q. What if you're wrong about the numbers?
 6 What if exposure to residential radon is
 7 associated with a higher number of lung
 8 cancers in this country than exposure to
 9 environmental tobacco smoke? If that were
 10 the case, would the presence --
 11 A. In a smoker.
 12 Q. In a nonsmoker. If that were the case,
 13 would the presence of radon in Mrs. Wiley's
 14 home affect your opinion about the cause of
 15 her disease, or be something you would have
 16 to consider in determining whether you could
 17 attribute her disease to exposure to
 18 environmental tobacco smoke?
 19 A. I would have to consider it.
 20 Q. Now, the next sentence in Exhibit -- is it
 21 19?
 22 A. Uh-huh.
 23 Q. -- says, "If we can control the amount of
 24 litigation that the tobacco industry will
 25 throw at us, we may have some hope." Would

Page 292

1 you explain that sentence to me.
 2 A. Well, if we can control the amount of
 3 litigation, the amount of money, and
 4 changing the facts, and -- we may have some
 5 hope. Essentially what it says.
 6 Q. Well, do you deny the companies who have
 7 been sued in this case the ability or
 8 opportunity to defend themselves --
 9 A. No.
 10 Q. -- and dispute the case?
 11 A. No.
 12 Q. Do you deny -- what is it about the amount
 13 of money that -- I mean, what do you mean,
 14 the amount of money?
 15 A. Well, you guys make a lot of money. I mean,
 16 you're very highly paid lawyers. Tobacco
 17 industry makes billions of dollars off of
 18 people's addictions every year. And you
 19 have a lot of money to hire people you want
 20 to hire, to change reality. So to speak.
 21 Q. Well, let me ask you this, Doctor. What
 22 reality do you think has been changed in
 23 this case?
 24 A. I don't know. I have not seen any other
 25 witnesses. All I know is from what's

Page 293

1 happened before on other litigation cases,
 2 I'm not an expert. I'm not a lawyer. I
 3 know what I read, and I know the medical
 4 literature.
 5 Q. Are you suggesting to the jury that a
 6 witness who testifies in a case like this on
 7 behalf of a cigarette company shouldn't be
 8 believed?
 9 A. I think the jury needs to look at all the
 10 evidence and look at what makes the most
 11 sense in each case.
 12 Q. And that relates to your testimony as well,
 13 doesn't it?
 14 A. Yes.
 15 Q. Do you think -- well, let me ask you this:
 16 Do you think Mr. Cross makes more or less
 17 money than some of the rest of us over here?
 18 A. I have no idea.
 19 Q. Well, and I ask a question like that in all
 20 seriousness. Just because a tobacco company
 21 has money to hire lawyers doesn't
 22 necessarily mean that they've hired better
 23 lawyers than Mr. Wiley has, does it?
 24 A. No.
 25 Q. You're not suggesting that Mr. Wiley's

Page 294

1 lawyers aren't as enthusiastic and as
 2 contentious and as hard working as the
 3 lawyers that have been hired to represent
 4 the companies their client has sued in this
 5 case, are you?
 6 A. No.
 7 MR. FURR: You may want to note how
 8 many are present today for the record.
 9 Q. In fact, there's six of them; right?
 10 A. Yes.
 11 Q. And one, two, three, four, five, six, seven,
 12 eight of us, but there are eight different
 13 companies who have been sued in the case;
 14 right? So they have more lawyers per person
 15 than we do; right?
 16 A. I guess so.
 17 Q. Okay. Hope of what is the question. My
 18 next question. "We may have some hope."
 19 Hope of what?
 20 A. Success.
 21 Q. And how do you define success in this case?
 22 A. Success to me means -- would mean that the
 23 individuals or companies that allowed her
 24 death to occur would be held liable.
 25 Q. And what facts do you think establish that

Page 295

1 liability?
 2 A. The cause of death, her exposure, her
 3 clinical history.
 4 Q. Doctor, what effort did you make in May of
 5 '93 to -- well, let me rephrase the
 6 question.
 7 You used the word, I might have used
 8 the word, we both, I think, used the word
 9 "truth" when we were talking about the
 10 history that was provided to you.
 11 You assume people give you complete,
 12 accurate, truthful information. What effort
 13 have you ever made in connection with this
 14 case to assemble enough information to find
 15 the truth in this case?
 16 A. What efforts have I made.
 17 Q. Let me rephrase the question. Is this the
 18 kind of situation where it's possible to
 19 find the absolute truth? I mean, is there a
 20 way to prove unequivocally that this woman's
 21 lung cancer was caused by exposure to
 22 environmental tobacco smoke beyond any
 23 doubt?
 24 A. I believe there is.
 25 Q. How would you do that?

Page 296

1 A. Again, I'm not a biochemist, but I do know
 2 that there are markers that occur in the
 3 tissues. Her exposure, her past medical
 4 history, the presentation, the fact that
 5 there was an endobronchial lesion, the fact
 6 that there is no other explanation. You
 7 know.
 8 Q. But see -- and I understand what you're
 9 saying, but that's my point. I'm trying to
 10 get away from no other explanation to I can
 11 put my finger on this and prove beyond doubt
 12 that this is the reason something happened.
 13 I mean, there are times, I take it, in your
 14 profession where you can do that. There are
 15 times where you can't. I'm just asking you,
 16 where does this situation fall on that
 17 continuum? I mean, you know --
 18 A. I feel that this case, this lady died as a
 19 result of environmental tobacco smoke.
 20 That's what I -- that's what I feel. That's
 21 what I felt back in '91. That's what I've
 22 felt for the last seven years.
 23 Q. And my question is, Is how would one go
 24 about --
 25 A. I just answered your question before.

Page 297

Page 299

1 Q.Okay, just --
 2 A.There are markers in the tissues.
 3 Q.Right. Let me ask you this then: Do you
 4 know whether those markers are specific to
 5 tobacco smoke or whether they are indicative
 6 of exposure to other substances that occur
 7 in other aspects of our lives?
 8 A.Well, in my reading, and this has been some
 9 time ago, I understand that there are
 10 markers that can occur where they identify
 11 certain chemicals that come off
 12 environmental tobacco smoke that can be
 13 picked up in tissue.
 14 Q.And my question, Doctor, is do you know
 15 whether those chemicals are present or found
 16 in other things like air, air pollution,
 17 food, water --
 18 A.Not food.
 19 Q.-- other substances?
 20 A.Not water. It has to be an inhalation. And
 21 since one of the major causes of
 22 environmental pollution in, especially in
 23 the house -- not in the house, in offices,
 24 et cetera, are -- or in the house, is
 25 environmental tobacco smoke, you know --

1 a cigarette here as opposed to somebody
 2 drove a car through here or somebody opened
 3 a window here or somebody -- you know what
 4 I'm saying?
 5 A.Well, there's nicotine, that comes from
 6 cigarettes. Or formaldehyde, but there's
 7 other things with formaldehyde.
 8 Q.That's my question. Tell me what substances
 9 are in environmental tobacco smoke that only
 10 come from environmental tobacco smoke.
 11 A.I would say probably nicotine. The other
 12 ones I can't tell you.
 13 MR. OHLEMEYER: Let's mark this as
 14 the next in order. This is No. 20.
 15 (Deposition Exhibit(s) 20 marked for
 16 identification.)
 17 Q.Doctor, this appears to me to be a draft of
 18 the letter you wrote in July of 1993 about
 19 Mrs. Wiley and her lung cancer. Does that
 20 make sense?
 21 A.Yes. I'm not sure if this is the final -- I
 22 don't know. If this is the final letter or
 23 a draft, I can't tell you.
 24 Q.I can assure you it's not. That's what
 25 we're going to talk about. You wrote a

Page 298

Page 300

1 Q.Can you tell me, Doctor, what chemicals in
 2 environmental tobacco smoke are unique to
 3 environmental tobacco smoke?
 4 A.Well, I have to look at my picture here, but
 5 pyrene, benzopyrenes -- I'm not a chemist,
 6 but --
 7 Q.Let me stop you there. Is it your testimony
 8 that benzopyrene is found in nothing other
 9 than environmental tobacco smoke?
 10 A.I'm not saying it's not found other places.
 11 I'm not a biochemist, I'm not a pollution
 12 expert, but I do know it's indoor air, it's
 13 environmental tobacco smoke, it's one of the
 14 markers.
 15 Q.My question, Doctor, is, can you tell me --
 16 and I appreciate you've got some notes,
 17 we'll mark those later, so I don't want
 18 to -- if it's in the notes it's in the
 19 notes.
 20 A.Yes.
 21 Q.But can you tell me whether there are any
 22 chemicals in environmental tobacco smoke
 23 that are so unique to environmental tobacco
 24 smoke that you can say if I find that
 25 chemical I can be sure that somebody smoked

1 letter on July 20, 1993, that you signed re:
 2 Mildred Wiley addressed To Whom it May
 3 Concern.
 4 A.This is June 7th, the one I have.
 5 Q.I know.
 6 A.Okay.
 7 Q.So this was written before the July 20th
 8 letter, right?
 9 A.June 7th was written before the July 20th
 10 letter.
 11 Q.And the letter you wrote in July of 1993 was
 12 in response to a request from the Department
 13 of Labor for information about Mrs. Wiley's
 14 death with respect to her employment. Do
 15 you recall that?
 16 A.If you have it there in front of you, I
 17 don't have it in front of me.
 18 Q.I thought we had it somewhere, but, I mean,
 19 I'm just reading from it so you don't -- my
 20 question to you is: Why did you write this
 21 letter and who asked you to write it and
 22 when were you asked to write it?
 23 A.Well, I wrote the letter at the request of
 24 probably her attorneys. Mr. Wiley's
 25 attorneys. Because I believe that they were

Page 297 - Page 300

STEWART-RICHARDSON & ASSOCIATES
 COURT REPORTERS (317) 237-3773

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 301	Page 303
<p>1 attempting to get some type of -- let's see</p> <p>2 here. I believe he was -- I believe he was</p> <p>3 applying for some type of benefits or</p> <p>4 something from her, because of her</p> <p>5 employment. That's my understanding.</p> <p>6 Q. Did you draft a copy of that letter before</p> <p>7 June of 1993?</p> <p>8 A. I can't be certain. If I don't have it in</p> <p>9 front of me I can't be certain.</p> <p>10 Q. Do you recall how many drafts of that letter</p> <p>11 you went through before you signed it?</p> <p>12 A. I don't know. Probably one or two maybe. I</p> <p>13 don't know.</p> <p>14 Q. From whom did you get the information that</p> <p>15 you incorporated into the letter?</p> <p>16 A. From my literature search. And from the</p> <p>17 hospital chart.</p> <p>18 Q. Did you get any information from the</p> <p>19 plaintiff's lawyers?</p> <p>20 A. I don't recall that I did. Unless it's</p> <p>21 stated in there.</p> <p>22 Q. Well, let me hand you a copy of that July</p> <p>23 20th letter.</p> <p>24 A. Yes.</p> <p>25 Q. And see on the back, page 5, your signature?</p>	<p>1 states that ETS results from the combination</p> <p>2 of side stream smoke..." what's your</p> <p>3 question then?</p> <p>4 Q. My question, if you see in the next</p> <p>5 paragraph, it says, "In summary then, in</p> <p>6 this report"; is it fair to say that the</p> <p>7 information in the paragraph between your</p> <p>8 citation and between your summary paragraph</p> <p>9 is information you obtained from that</p> <p>10 report? I'm just trying to figure out where</p> <p>11 you got that information.</p> <p>12 A. Well, most likely it was, although I had a</p> <p>13 number of other articles that I was</p> <p>14 reviewing at the same time. Most likely</p> <p>15 what I did is I looked at the Surgeon</p> <p>16 General's Report, they have a number -- they</p> <p>17 have a bibliography back there, I followed</p> <p>18 that and got additional reports from the</p> <p>19 bibliography as well.</p> <p>20 Q. Now, between June of '93 and July of '93 you</p> <p>21 made some revisions to this letter. My</p> <p>22 question, Doctor, is tell me, describe the</p> <p>23 process by which you made those revisions.</p> <p>24 A. Well, it may have been that I may not have</p> <p>25 been specific enough. And I would suspect</p>
Page 302	Page 304
<p>1 A. Yes.</p> <p>2 Q. So this is the one you signed and gave to</p> <p>3 the plaintiff's attorneys.</p> <p>4 A. Yes.</p> <p>5 Q. You see on page 3 where there's a</p> <p>6 description of the 1986 Surgeon General's</p> <p>7 Report, that third paragraph?</p> <p>8 A. Third paragraph.</p> <p>9 Q. This report was prepared by --</p> <p>10 A. Department of Health and Human Services.</p> <p>11 Q. Is all the information in that paragraph</p> <p>12 about the chemistry of environmental tobacco</p> <p>13 smoke information you obtained from that</p> <p>14 Surgeon General's Report?</p> <p>15 A. This report was prepared by the Department</p> <p>16 of Health and Human Services. Let's see</p> <p>17 here. It says "In 1986 in a report of the</p> <p>18 Surgeon General entitled "The Health</p> <p>19 Consequences of Involuntary Smoking" it was</p> <p>20 stated that involuntary smoking is the cause</p> <p>21 of disease including lung cancer in healthy</p> <p>22 nonsmokers.</p> <p>23 "This report was prepared by the</p> <p>24 Department of Health and Human Services with</p> <p>25 contributions from numerous scientists. It</p>	<p>1 that's the -- the reason why the revision, I</p> <p>2 wanted to make sure everything was crystal</p> <p>3 clear.</p> <p>4 Q. What do you mean by not specific enough?</p> <p>5 A. Perhaps there was some areas that was not</p> <p>6 adequately explained or definitive enough.</p> <p>7 Q. Well, how did you make that determination?</p> <p>8 A. Most likely the attorneys may have read this</p> <p>9 and came back to me and said we need to make</p> <p>10 this a little bit more specific.</p> <p>11 Q. So you prepared the June 7th letter and in</p> <p>12 all likelihood sent it to the lawyers --</p> <p>13 A. Uh-huh.</p> <p>14 Q. -- and then worked with them to prepare the</p> <p>15 July 20th letter?</p> <p>16 A. Not worked with them. They may have made</p> <p>17 some recommendations. Since I have not</p> <p>18 written a letter to OSHA before and I</p> <p>19 suspect they have, they were helping me be</p> <p>20 as clear as possible. We were -- we</p> <p>21 essentially are -- I mean, I felt that I was</p> <p>22 writing for Mrs. Wiley. I was essentially</p> <p>23 helping her and her husband.</p> <p>24 Q. But they were certainly providing some</p> <p>25 information or assistance to you in</p>

Page 305

1 preparing the letter.
 2 A. Not literature, no.
 3 Q. Well, I mean editorial.
 4 A. No. They were specifically saying to me,
 5 they may have read the letter and said you
 6 need to make this more specific. This is my
 7 recall of this.
 8 Q. Did they tell you to delete anything from
 9 your June draft?
 10 A. I can't recall.
 11 Q. Let's look specifically on page 2 of the
 12 June draft.
 13 A. Okay.
 14 Q. Which is Exhibit 20. You see the last
 15 sentence of the paragraph that begins "this
 16 patient"?
 17 A. Okay. "This patient had no other exposure."
 18 Q. See the last sentence begins "Since"?
 19 A. "Since this patient had no other source of
 20 known carcinogen including the fact that
 21 radon levels in her house were extremely low
 22 or non-existent by history..."
 23 Q. I'm going to stop you right there. Tell me
 24 what that sentence means, "radon levels in
 25 her house were extremely low or non-existent

Page 306

1 by history."
 2 A. It was probably, by that time, if that's
 3 what it says, is that I was given the
 4 history that the radon exposures were
 5 extremely low or non-existent.
 6 Q. Who gave you that history and on what basis
 7 did they give it to you?
 8 A. Most likely it was given to me by the
 9 attorneys since I don't -- I have no idea
 10 where she even lived except someplace over
 11 near Marion.
 12 Q. And you could do nothing but take their word
 13 for it.
 14 A. Yes.
 15 Q. Now, why didn't that sentence end up in the
 16 July 20th letter?
 17 A. I don't know.
 18 Q. Did they tell you to delete it?
 19 A. Not that I'm aware of.
 20 Q. Do you recall why you deleted it?
 21 A. No.
 22 Q. What did you know in June --
 23 A. There should be no reason for deleting it.
 24 Q. Well, I can assure you it's not there. My
 25 question is: Do you recall why it's not

Page 305 - Page 308

Page 307

1 there?
 2 A. No.
 3 Q. All right. And the reason it shouldn't be
 4 deleted is because the issue of radon and
 5 her potential exposure to radon is something
 6 that would be very important to look at in
 7 trying to determine what caused her cancer;
 8 isn't that right?
 9 A. Yes.
 10 Q. Now, Doctor, the next question I have is,
 11 you see on page 2, that sentence that says
 12 "Other potential etiologies may have
 13 been..."; it's the end of that first
 14 paragraph.
 15 A. Which letter are --
 16 Q. Page 2, June 7.
 17 A. June 7, page 2. Now, what?
 18 Q. Last sentence of that last paragraph, "Other
 19 potential etiologies may have been breast or
 20 pancreatic"?
 21 A. Yes.
 22 Q. That thought, those four sentences aren't in
 23 your July 20th letter. Do you know why
 24 these sentences were deleted from that
 25 letter?

Page 308

1 A. No.
 2 Q. Do you know whether the attorneys suggested
 3 you delete those sentences from that letter?
 4 A. No, because it would seem to me like that
 5 should have been in the -- I mean, it just
 6 makes a stronger case.
 7 Q. Well, can you -- by the way, who typed this
 8 letter?
 9 A. Probably Delores, one of our typists.
 10 Q. So you don't have any recollection as to why
 11 those sentences were deleted from the July
 12 20th letter.
 13 A. No.
 14 Q. Now, you see on the bottom of the page,
 15 first page of the June 7th letter --
 16 A. Yes.
 17 Q. -- it says "The patient was critically ill
 18 when she was admitted"?
 19 A. Let me see here. Where is this at?
 20 Q. Bottom of the page.
 21 A. Bottom of the page? Page 2.
 22 Q. Page 1.
 23 A. Okay.
 24 Q. "Patient was critically ill when she was
 25 admitted to the hospital; she was having a

STEWART-RICHARDSON & ASSOCIATES
 COURT REPORTERS (317) 237-3773

Page 309

1 great deal of difficulty giving a complete
 2 history?"
 3 A. Yes.
 4 Q. Now, in your admission note, you don't make
 5 any reference to any difficulty Mrs. Wiley
 6 had in giving a history to you, do you?
 7 A. Probably not. If it didn't say it there.
 8 Q. And in the July 20th letter, you don't make
 9 any reference to any difficulty Mrs. Wiley
 10 had in giving you a complete history.
 11 A. If it's not there, it's not there.
 12 Q. Do you know why it's not there?
 13 A. No.
 14 Q. I mean, is one of the reasons it's not there
 15 because she wasn't having a great deal of
 16 difficulty giving you a complete history?
 17 A. I can't tell you that. I'm not going to
 18 lie. I'm not going to lie.
 19 Q. I'm not asking you to lie, Doctor. I'm
 20 asking you to tell me whether the reason you
 21 did not include a reference to any
 22 difficulty Mrs. Wiley may have had in giving
 23 you a complete history in your July 20th
 24 letter is because she, in fact, did not have
 25 a great deal of difficulty giving you a

Page 310

1 complete history as evidenced by your
 2 admission note.
 3 A. Well, if it's not --
 4 MR. CROSS: Why don't you let the
 5 witness have an opportunity to look at the
 6 document, make sure that it's there or not
 7 there.
 8 A. I mean, the point is that you're --
 9 Q. My point is this, I guess.
 10 A. You're being nit-picking.
 11 Q. If it's not in the admission note it's not
 12 there.
 13 A. Right.
 14 Q. If it's not in the admission note, it's not
 15 an observation that you thought was
 16 important to the diagnosis and treatment of
 17 Mrs. Wiley.
 18 A. Yes.
 19 Q. Okay. So now let's go to page 2 of the July
 20 20th letter. See at the top of page 2?
 21 A. Yes.
 22 Q. Says "bilateral pleural effusions"?
 23 A. Yes.
 24 Q. Are bilateral pleural effusions a marker of
 25 asbestos exposure?

Page 311

1 A. No.
 2 Q. Are they a symptom of an asbestos-related
 3 lung disease?
 4 A. They could be if the history was such and
 5 you had calcification on the lung.
 6 Q. Does the EPA believe that asbestos is a
 7 group A carcinogen?
 8 A. Yes.
 9 Q. Does the EPA believe there is a safe level
 10 of exposure to asbestos?
 11 A. I would suspect there is not. But I can't
 12 be certain since I'm not an expert on that
 13 area. But I would suspect there is no safe
 14 level or they wouldn't have torn it out of
 15 hundreds of schools.
 16 Q. What do you know about Mrs. Wiley's history
 17 of exposure to asbestos?
 18 A. Well, she, as far as I know, she had none.
 19 Q. What effort did you make to determine
 20 whether there was pathological evidence of
 21 asbestos in Mrs. Wiley's lungs?
 22 A. Well, in the biopsy as well as the autopsy
 23 report there was no clear evidence of
 24 asbestos in the lungs itself. They would
 25 have picked that up at micropathology.

Page 312

1 Q. Well, isn't it more accurate to say that the
 2 pathologist examined iron stains of four
 3 sections of the lung, taken on autopsy, to
 4 determine whether or if there were asbestos
 5 bodies present?
 6 A. I need to look at -- since you're reading
 7 something I just want to make sure I'm --
 8 Q. Well, let me ask you, you don't have -- I
 9 mean, that's not a subject with which you
 10 have --
 11 A. All I know is my understanding is that the
 12 pathology report, they looked for asbestos
 13 bodies, there was no evidence of them.
 14 Q. Now, Dr. Kocoshis suggested to you that lung
 15 tissue could be sent to Duke University
 16 where a more sensitive analysis could be
 17 done and that would be to quantify the
 18 presence of asbestos in the lung tissue;
 19 isn't that right?
 20 A. Yes.
 21 Q. Do you know whether anyone ever did that or
 22 looked at that or followed up on it?
 23 A. I cannot tell you whether it was done or
 24 not.
 25 Q. Let me show you what was marked as Exhibit 7

Page 313

1 at Dr. Songer's deposition. Can you tell me
 2 whose handwriting that is?
 3 A.Mine.
 4 Q.Okay. Thank you.
 5 MR. FURR: Excuse me. Before you
 6 go on, I don't think you marked the July
 7 20th letter.
 8 MR. OHLEMEYER: That's right.
 9 MR. FURR: It may have been marked
 10 the last time, during the first deposition
 11 we took.
 12 MR. CROSS: No, it wasn't.
 13 MR. FURR: It was not.
 14 THE WITNESS: Says Exhibit 2.
 15 MR. OHLEMEYER: That's from
 16 something else. I haven't, but I'll get to
 17 it. We might as well mark it, go ahead and
 18 mark it next in order.
 19 (Deposition Exhibit(s) 21 marked for
 20 identification.)
 21 Q.Doctor, do you know or remember when you
 22 wrote this little note on Exhibit 7?
 23 A.No. Most likely it was about the time that
 24 I received this. Which is November -- I
 25 mean, I may have received it after November

Page 314

1 24, '93.
 2 Q.All right.
 3 A.Her clinical presentation was not consistent
 4 with that. I mean, she had no calcium in
 5 her lung, there was none in the x-ray.
 6 Q.But at some point, Doctor, two years, two
 7 and a half years after Mrs. Wiley's death,
 8 you suggested to Dr. Songer, or you inquired
 9 of him do you think we should look at this
 10 further.
 11 A.Yes.
 12 Q."This" being the quantification of asbestos
 13 at Duke University.
 14 A.Yes.
 15 Q.And you don't know if anyone ever did that.
 16 A.I'm not -- I do not have any recall whether
 17 anyone did that. It was down -- I mean,
 18 with her clinical presentation and the fact
 19 that we had autopsies, I mean, it was --
 20 that was not even in the differential.
 21 Q.Well, November 24, 1993, the differential,
 22 as you described it, has nothing to do with
 23 Mrs. Wiley's treatment; right?
 24 A.Right.
 25 Q.I mean, November 24, 1993, has to do with

Page 315

1 the lawsuit that you and the lawyers have
 2 been discussing and some of the other
 3 entities we've discussed already; right?
 4 A.Has to do with the fact that whether this
 5 case was consistent and could be brought
 6 forth -- could go forward for this
 7 situation.
 8 Q.One way to critically analyze your opinion
 9 would be to conduct that type of analysis to
 10 determine whether or not there was asbestos
 11 in Mrs. Wiley's lungs.
 12 A.That would be one way.
 13 Q.Another way to critically analyze your
 14 opinion would be to measure and record the
 15 amount of radon that might be present in a
 16 home in which Mrs. Wiley lived.
 17 A.Yes.
 18 Q.Another way to critically analyze your
 19 opinion would be to compare Mrs. Wiley's
 20 history of exposure to the history of
 21 exposures given in groups of people who have
 22 been studied in epidemiological studies, who
 23 have demonstrated either an increased or a
 24 not increased incidence of lung cancer.
 25 A.In what situation now?

Page 316

1 Q.If we took Mrs. Wiley's history and we
 2 compared it to the histories that are
 3 contained in epidemiological studies, one
 4 way to critically analyze your opinion would
 5 be to see whether a history like
 6 Mrs. Wiley's was correlated with an
 7 increased risk of lung cancer in those
 8 epidemiological studies.
 9 A.And epidemiological studies having to do
 10 with what?
 11 Q.With individuals who are nonsmokers who were
 12 exposed to environmental tobacco smoke.
 13 A.You switched gears now.
 14 Q.I'm sorry, but I'm right. Well, I shouldn't
 15 say that. Am I correct?
 16 A.You've asked that question before.
 17 Q.I thought I had, I wasn't sure.
 18 A.You have.
 19 Q.One way to critically analyze your opinion
 20 would be to compare her history of exposure
 21 to history of exposures of individuals who
 22 have been described as nonsmokers in
 23 epidemiological studies to see whether
 24 there's an increased incidence of lung
 25 cancer in those types of people.

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 317

1 A.I don't understand your question. Because
 2 what you're saying is nonsmoking.
 3 Q.Well --
 4 A.Does that mean they're exposed to secondhand
 5 smoke as well or not --
 6 Q.Let's back up. If I'm a cigarette smoker
 7 and I have lung cancer --
 8 A.Yes.
 9 Q.-- one way to arrive at an opinion about the
 10 cause of my lung cancer is to look at
 11 epidemiological studies of people who have a
 12 history of cigarette smoking. And you say,
 13 Well, gee, if people with a history of
 14 cigarette smoking have an increased
 15 incidence of lung cancer, then I'm
 16 suspicious that this man with this history
 17 might have a lung cancer associated with
 18 that history; right? I mean that's just --
 19 that's part of the process.
 20 A.Yes. The studies have been done that those
 21 who smoke have an increased risk and the
 22 duration and the level of exposure they have
 23 to tobacco smoke tells us whether they have
 24 an increased risk -- or they do have an
 25 increased risk; tells us how much of an

Page 318

1 increased risk they do have.
 2 Q.And one way to critically analyze your
 3 opinion about the cause of Mrs. Wiley's
 4 disease would be to look for studies,
 5 epidemiological studies --
 6 A.Yes.
 7 Q.-- of nonsmokers that have been done that
 8 describe histories of exposure similar to
 9 Mrs. Wiley's history of exposure and to
 10 determine whether those groups of people
 11 demonstrate an increased incidence of lung
 12 cancer.
 13 A.Yes.
 14 Q.Okay. Doctor, let me ask you to pull out
 15 Exhibit 3 from your deposition.
 16 A.Which one is that?
 17 Q.That's the one that says Exhibit 3. I'm
 18 sorry. Tell you what, do you mind, let's
 19 mark those notes as the next in order. And
 20 then maybe we can make a copy during lunch.
 21 THE WITNESS: Put your notes in as
 22 an exhibit, too?
 23 (Deposition Exhibit(s) 22 marked for
 24 identification.)
 25 (Discussion off the record)

Page 319

1 Q.Exhibit 3, Doctor, previously marked --
 2 MR. WAGNER: So did we mark her
 3 notes as an exhibit?
 4 MR. OHLEMEYER: I'm sorry, 22.
 5 Q.You've had a chance to review this since our
 6 last session?
 7 A.I've read it.
 8 Q.It's a dictation created by you on or about
 9 May 24, 1993 --
 10 A.Yes.
 11 Q.-- describing a discussion you had with a
 12 number of people including Dr. Songer.
 13 A.Yes.
 14 Q.You talked with Dr. Songer about the
 15 diagnosis of lung cancer as it relates to
 16 Mrs. Wiley; right?
 17 A.Yes.
 18 Q.And at the time you talked to him, did he
 19 tell you that he was reluctant if not unable
 20 to get up on a witness stand and state that
 21 this unequivocally was a primary lung
 22 cancer?
 23 A.What he stated was, until he evaluated the
 24 case more and looked at the literature,
 25 looked at what we had, he wanted to make

Page 320

1 sure that he could get up on the witness
 2 stand and truthfully state that that was his
 3 opinion.
 4 Q.So as of May 24, 1993, Dr. Songer told you
 5 he was unable to truthfully state that in
 6 his opinion Mrs. Wiley suffered from a
 7 primary carcinoma of the lung.
 8 A.He stated that he was unable to
 9 unequivocally state that that was lung
 10 cancer because of the elevated CA15-3.
 11 Q.And CA15-3, as he told you, might indicate a
 12 primary breast cancer.
 13 A.But it was nonspecific. And may also
 14 indicate pancreatic or lung cancer.
 15 Q.So then you got off the phone with
 16 Dr. Songer and called Mr. Riley.
 17 A.Yes.
 18 Q.And you asked him if there were some
 19 pathologists he could recommend to you to
 20 look at the slides in this case.
 21 A.I don't know if recommend to me or not. But
 22 what we wanted to do is, again, we were
 23 looking at this case to see if this was a
 24 strong case that could go forward.
 25 Q.They weren't interested in going forward

Page 321

1 with a weak case.
 2 A. Well, would you?
 3 Q. Well, sometimes I have to. They get a
 4 choice.
 5 A. Well -- I mean, we want to try to make sure
 6 that this case, after critical evaluation,
 7 as you state, looked at everything and the
 8 expert witnesses would come up with the same
 9 determination.
 10 Q. So you were looking for people who would
 11 confirm your opinions or suspicions about
 12 the cause of her cancer.
 13 A. What we were looking for -- and I truly
 14 believe this and remember this -- what we
 15 were looking for is we would let them see
 16 the pathology slides or whatever, look at
 17 the case, and come back to us and state this
 18 is unequivocally related to primary lung.
 19 Which is what we did.
 20 Q. And one of the things that Dr. Kocoshis
 21 suggested to you was that -- Dr. Kocoshis
 22 did the autopsy; right?
 23 A. Yes.
 24 Q. That although he felt the tumor from the
 25 slides is probably related to lung cancer,

Page 323

1 look at the bone marrow but also go back to
 2 the case and make sure everything fits
 3 together, or they're not a very good
 4 pathologist.
 5 Q. Well, how many times has Dr. Kocoshis come
 6 to you with an opinion about the cause of
 7 cancer that he has observed in an
 8 individual?
 9 A. A number of times.
 10 Q. And what does he tell you?
 11 A. What his best opinion is regarding the
 12 slides, the biopsy reports, and the case.
 13 Q. Well, what did he tell you in this case on
 14 May 24, 1993?
 15 A. That, from looking at the slides, I -- and
 16 he felt that the tumor from the slides is
 17 probably related to lung cancer, but given
 18 the elevated CA15-3 possibly breast or
 19 pancreas.
 20 Q. So is it fair to say he wouldn't rule out
 21 the possibility of a breast or pancreatic
 22 primary?
 23 A. That's what he said. He could not rule out
 24 from the slides -- not from the slides, but
 25 the CA15-3.

Page 322

1 that it was possible it could have been a
 2 breast or a pancreatic primary given the
 3 elevated CA15-3.
 4 A. It says, "the tumor from the slides is
 5 probably related to lung cancer, but given
 6 the elevated CA15-3 possibly breast or
 7 pancreas."
 8 Q. That was what Dr. Kocoshis told you?
 9 A. Yes, but I do not recall whether he had
 10 looked at the entire case or was just
 11 looking at this. Knowing Dr. Kocoshis, he
 12 probably looked at the case -- looked at the
 13 slides, and with all the thousands of other
 14 slides he looks at and all the other
 15 thousands of cases he's contended with, that
 16 he had not looked at everything.
 17 Q. Well, his job, typically, as pathologist,
 18 isn't it, is to look at the slides.
 19 A. Yes.
 20 Q. And let other doctors like you look at the
 21 clinical.
 22 A. No. Not really. I mean, pathologists read
 23 the chart. I mean, if they come in and look
 24 at -- if somebody's anemic and a pathologist
 25 that does the bone marrow evaluation will

Page 324

1 Q. And he suggested to you the work at Duke
 2 that was repeated again in November of 1993.
 3 A. Other individuals -- Duke University has a
 4 specialist in asbestos, that he would --
 5 could do a quantitative analysis of the
 6 slides to tell how much asbestos Mrs. Wiley
 7 was exposed to.
 8 Q. Now, do you recall talking about this case
 9 with Dr. Triplett, or was it Mr. Riley that
 10 talked to Dr. Triplett?
 11 A. I believe I talked to Dr. Triplett.
 12 Q. And did Dr. Triplett tell you that it was
 13 unusual to find peripancreatic tumor in the
 14 absence of a primary pancreatic tumor?
 15 A. It is unusual to find peripancreatic in the
 16 absence of primary pancreas, yes.
 17 Q. Did he tell you the fact there was
 18 pancreatic involvement made him suspicious
 19 of a primary pancreatic tumor?
 20 A. No, that's not what he said. He said the
 21 fact that there is no primary pancreatic
 22 cancer makes you most likely -- very, very
 23 strongly suspicious that this is a primary
 24 lung that was metastatic to the
 25 peripancreatic tissue.

Page 325	Page 327
<p>1 Q. But did he tell you that it would not be 2 unusual to find peripancreatic cancer 3 tissues if you had a primary pancreatic 4 tumor. 5 A. Repeat that. 6 Q. Here's what I don't understand. As I read 7 this, it appears that Dr. Triplett suggested 8 that there was something remarkable or 9 unusual about the peripancreatic 10 involvement. 11 A. Not really. I mean, the fact that it -- I 12 mean, it would make most sense, if this was 13 a primary pancreatic cancer, then you would 14 have found it in the pancreas, you would not 15 have found it just in the peripancreatic 16 tissue. And that would go along with a 17 metastatic lesion from the lung. 18 Q. But would it also go along with a primary 19 pancreatic tumor that grows into the 20 peripancreatic? 21 A. That's not what you have here. 22 Q. We'll get to that. 23 A. No, you don't do that. You don't have -- 24 Q. You don't have -- what do you mean you don't 25 have it here? You don't have a pathologist</p>	<p>1 says, "The pancreas is appropriate in shape 2 and size with respect to total body fat 3 stores. On cut surface, it is lobular with 4 interspersed fat without focal 5 calcification, fibrosis, hemorrhage or fat 6 necrosis. Autolysis is not significant. 7 There is a possible metastatic tumor in the 8 peripancreatic lymph nodes." That is not in 9 the pancreas itself. 10 Q. Now, if we wanted to critically analyze 11 Dr. Kocoshis's opinion, we could take the 12 slides and have a well-trained pathologist 13 look at them and see if he or she agrees 14 with that: right? 15 A. You could do that. 16 Q. All right. Now, Doctor, is it more common 17 for primary carcinoma of the pancreas to 18 metastasize to the lung or for a primary 19 carcinoma of the lung to metastasize to the 20 pancreas? 21 A. I can't tell you those statistics. Pancreas 22 or pancreatic tissue? 23 Q. Pancreas. 24 A. Well, it's very uncommon, I would think. 25 that a primary lung would not go -- I mean,</p>
Page 326	Page 328
<p>1 who has told you that? 2 A. We had an autopsy report that went through 3 the pancreas and said there was no 4 pancreatic cancer. I'd have to look at it 5 again, but this is just peripancreatic. And 6 the CAT scan would go along with that as 7 well. 8 Q. And what happens at the autopsy is the 9 pathologist takes some tissue from an 10 organ -- 11 A. Yes. 12 Q. -- puts it on a slide -- 13 A. Yes. 14 Q. -- looks at it. 15 A. Well, he also looks at it grossly. 16 Q. Correct. Looks at it microscopically? 17 A. Grossly and microscopically and -- 18 Q. And then makes a judgment as to whether he 19 or she sees an abnormality or not. 20 A. Yes. 21 Q. And in this case, Dr. Kocoshis doesn't 22 describe or does describe an abnormality in 23 the pancreas. 24 A. It says the pancreas -- this is from the 25 autopsy report, this is Dr. Kocoshis. It</p>	<p>1 it's possible, I guess -- go to the pancreas 2 as well as the pancreatic tissue. 3 Q. Okay. 4 A. But most likely it's just peripancreatic. 5 Q. But is it more or -- what's more common, a 6 primary carcinoma of the lung metastasizing 7 to the peripancreatic lymph nodes or a 8 primary carcinoma of the pancreas 9 metastasizing to the lung? 10 A. The common numbers? I can't tell you that. 11 it depends on the population. My point is, 12 is that pancreatic cancer could metastasize 13 to the lung, but that -- but more likely the 14 alternative is, is lung cancer would go to 15 the peripancreatic tissue. 16 Q. Well, my question is specifically that, 17 Doctor: What's more common, a primary 18 carcinoma of the lung that -- 19 A. I can't tell you the numbers. 20 Q. Okay. And the numbers aren't unimportant, 21 are they, to you as a doctor in trying to 22 determine the primary site of some of these 23 cancers, are they? When you say the 24 numbers -- 25 A. The numbers are important. But you're kind</p>

Page 329	Page 331
<p>1 of confusing things. Or maybe you're</p> <p>2 confused. But the point is, is that lung</p> <p>3 cancer most likely would go to the</p> <p>4 peripancreatic tissue. If it was a primary</p> <p>5 pancreas, it would go the other way. You</p> <p>6 see my point?</p> <p>7 Q. Yes. And my question to you, Doctor, is,</p> <p>8 what's more common, a tumor in the lung</p> <p>9 metastasizing to the pancreatic tissue, or a</p> <p>10 tumor that starts in the pancreas</p> <p>11 metastasizing to the lung? I think you keep</p> <p>12 telling me you don't know; that's fine.</p> <p>13 MR. CROSS: Are you talking about</p> <p>14 the pancreatic tissue or the peripancreatic?</p> <p>15 THE WITNESS: Peripancreatic</p> <p>16 tissue.</p> <p>17 Q. No. I'm talking about the pancreas. A</p> <p>18 primary pancreatic cancer.</p> <p>19 A. An oncologist would be able to tell you this</p> <p>20 for sure but I have not seen where a primary</p> <p>21 lung in my experience has gone from the lung</p> <p>22 to the pancreas.</p> <p>23 Q. I don't want to interrupt you, I'm not</p> <p>24 talking about your experience. I'm talking</p> <p>25 about the collective experience --</p>	<p>1 variability in the analysis of pathological</p> <p>2 specimens?</p> <p>3 A. You look at the evidence, you see what is</p> <p>4 most likely the etiology or the diagnosis.</p> <p>5 And you look at -- I mean, you look at what</p> <p>6 most likely -- I mean, there is no reason</p> <p>7 Dr. Kocoshis should lie on this.</p> <p>8 Q. Dr. Turner, I have not suggested, nor have I</p> <p>9 asked you whether Dr. Kocoshis lied. My</p> <p>10 question to you, I can either have the court</p> <p>11 reporter read it back --</p> <p>12 A. I understand the question.</p> <p>13 Q. And it can be answered yes or no or I don't</p> <p>14 know. Isn't it a fact that there is inter-</p> <p>15 and intraobserver variability in the</p> <p>16 analysis of pathological specimens?</p> <p>17 A. It would seem to me like when he's doing the</p> <p>18 autopsy report, if there was any question</p> <p>19 that there was changes there that he would</p> <p>20 even question, he would have had -- I mean,</p> <p>21 there is how many pathologists over at Ball</p> <p>22 Hospital; ten, eight? I don't know how many</p> <p>23 there were back then, eight or ten.</p> <p>24 I know for sure that if there was any</p> <p>25 question about those slides, he would have</p>
Page 330	Page 332
<p>1 A. Well, you'll need to go to an oncologist to</p> <p>2 talk like that. To talk about that.</p> <p>3 Q. And my point though, and I want you to agree</p> <p>4 or disagree with me, the collective</p> <p>5 experience of other doctors is not</p> <p>6 unimportant to you as a clinician in trying</p> <p>7 to determine an appropriate diagnosis and a</p> <p>8 site of a tumor in somebody where there's</p> <p>9 some uncertainty about it.</p> <p>10 A. No, it's very important.</p> <p>11 Q. Doctor --</p> <p>12 A. But let me clarify again, the autopsy</p> <p>13 report -- I mean, the autopsy is the</p> <p>14 ultimate biopsy. Okay? It is the ultimate</p> <p>15 biopsy of a patient. There is no primary</p> <p>16 pancreatic cancer in this autopsy report.</p> <p>17 Q. But you agree with me that if I wanted to</p> <p>18 critically analyze Dr. Kocoshis's opinions</p> <p>19 about that, I could just have another</p> <p>20 pathologist or two or three or four look at</p> <p>21 the slides and see if he or she agrees with</p> <p>22 him.</p> <p>23 A. Yes, you could.</p> <p>24 Q. And you certainly are aware of the fact that</p> <p>25 there is some inter- and intraobserver</p>	<p>1 called up and said, Dr. Branham, come down</p> <p>2 here and look at this. I want to make sure,</p> <p>3 because when I make a diagnosis, I want to</p> <p>4 make sure. I mean, this is a legal</p> <p>5 document. He would have had other people</p> <p>6 look at the slides.</p> <p>7 MR. OHLEMEYER: Would you read back</p> <p>8 my question, please.</p> <p>9 A. The question is, is there inter- --</p> <p>10 Q. -- and intraobserver variability in the</p> <p>11 analysis of pathological specimens.</p> <p>12 A. There can be.</p> <p>13 Q. And in fact, Doctor --</p> <p>14 A. Was there in this case?</p> <p>15 Q. Well, that's my question. I guess if we're</p> <p>16 going to do a critical analysis of</p> <p>17 Dr. Kocoshis's opinions, the fact that</p> <p>18 another pathologist may disagree with him</p> <p>19 does not in and of itself suggest to you</p> <p>20 that they are either wrong or believe</p> <p>21 Dr. Kocoshis to be a liar, does it?</p> <p>22 A. I think it has to do with their training,</p> <p>23 their background, their experience. And</p> <p>24 looking at the entire picture.</p> <p>25 Q. And the entire picture that a pathologist is</p>

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 333	Page 335
<p>1 looking at when he or she is diagnosing a</p> <p>2 pathological specimen is in the microscope:</p> <p>3 right?</p> <p>4 A. Not always. They look at the entire</p> <p>5 picture. They look, I told you before, they</p> <p>6 look at the history. I mean, if there's any</p> <p>7 question, they go back, read the chart, look</p> <p>8 at the -- I mean, they've called me and</p> <p>9 said, Is this chest x-ray or -- I mean, what</p> <p>10 did the bone scan show, and then they --</p> <p>11 everything has to fit together.</p> <p>12 Q. Doctor, what did Dr. Kocoshis conclude was</p> <p>13 the cause of Mrs. Wiley's adenocarcinoma of</p> <p>14 the right lung? And I'll refer you to page</p> <p>15 5 of his report.</p> <p>16 A. Page 5 of his report.</p> <p>17 Q. Here, I've got it in my hand.</p> <p>18 A. He does not state.</p> <p>19 Q. In fact, there's a slot right there that</p> <p>20 says --</p> <p>21 A. That's often left -- I mean, they --</p> <p>22 Q. Here's my question, Dr. Turner.</p> <p>23 A. Yes.</p> <p>24 Q. It says "Immediate Cause of Death:</p> <p>25 Adenocarcinoma of the right lung"; right?</p>	<p>1 lunch.</p> <p>2 Exhibit 3, you still have that in front</p> <p>3 of you?</p> <p>4 A. Exhibit 3, yes.</p> <p>5 Q. It says, the bottom of that paragraph that</p> <p>6 begins Mr. Riley, "A gross evaluation of the</p> <p>7 breasts was completed with palpation, and</p> <p>8 this was negative." And in layman's terms</p> <p>9 that means the breasts were looked at by the</p> <p>10 pathologist conducting the autopsy and he</p> <p>11 felt them or touched them and didn't feel</p> <p>12 any abnormalities; right?</p> <p>13 A. No, it doesn't mean that.</p> <p>14 Q. What does it say?</p> <p>15 A. It says -- okay, okay, okay. Now, this is</p> <p>16 during -- okay. Dr. Triplett, pathologist,</p> <p>17 did review the slides. It was -- "In</p> <p>18 reviewing the autopsy report, however, the</p> <p>19 pancreas was normal with the exception of</p> <p>20 peripancreatic metastatic tissue. This</p> <p>21 would be pretty unusual if they did not find</p> <p>22 a primary pancreatic tumor inside the</p> <p>23 pancreas and just not on the peripancreatic</p> <p>24 lymph nodes. The stomach was looked at and</p> <p>25 was negative. The bowel was looked at and</p>
Page 334	Page 336
<p>1 A. It says adenocarcinoma of the right -- colon</p> <p>2 right lung. "Immediate Cause of Death --"</p> <p>3 Q. Colon.</p> <p>4 A. Yeah, colon.</p> <p>5 Q. Adenocarcinoma.</p> <p>6 A. But it's not like colon like colon bowel.</p> <p>7 Q. It's punctuation.</p> <p>8 A. Yes.</p> <p>9 Q. Immediate Cause of Death, colon -- that</p> <p>10 trick doesn't work. I've tried that. I'm</p> <p>11 being facetious. "Immediate Cause of Death:</p> <p>12 Adenocarcinoma of the right lung."</p> <p>13 A. Yes.</p> <p>14 Q. "Due to:" Blank.</p> <p>15 A. And there's nothing there.</p> <p>16 Q. And it says, "Other Conditions: Bilateral</p> <p>17 pleural effusions."</p> <p>18 A. Yes.</p> <p>19 Q. Do you know why Dr. Kocoshis thought that</p> <p>20 was remarkable or noteworthy?</p> <p>21 A. Bilateral pleural effusions, you'll have to</p> <p>22 ask him. Oftentimes they put down things</p> <p>23 that they remember and are trying to bring</p> <p>24 out.</p> <p>25 Q. Couple more questions, we'll break for</p>	<p>1 was negative. A gross evaluation of the</p> <p>2 breasts was completed with palpation --" so</p> <p>3 the pathologist palpated the breast.</p> <p>4 Q. What does palpated mean?</p> <p>5 A. They felt the breasts. "And this was</p> <p>6 negative."</p> <p>7 Q. What does negative mean?</p> <p>8 A. Negative means negative. It means that it</p> <p>9 was -- they did not palpate any</p> <p>10 abnormalities.</p> <p>11 Q. All right. But nobody sectioned the breasts</p> <p>12 and looked at them under the microscope, did</p> <p>13 they?</p> <p>14 A. There would be no need to. I mean, they</p> <p>15 don't do slices through breasts if, I mean,</p> <p>16 if there's no need to.</p> <p>17 Q. Well --</p> <p>18 A. And you could ask Dr. Kocoshis --</p> <p>19 Q. -- how do you define need?</p> <p>20 A. You could ask Dr. Kocoshis why he did not do</p> <p>21 slices through the breast. He was the</p> <p>22 pathologist; he was doing the autopsy.</p> <p>23 Q. Well, would you, as a clinician, expect a</p> <p>24 pathologist conducting an autopsy in a woman</p> <p>25 with an elevated level of CA15-3 who was</p>

Page 337

Page 339

1 treated with a hormone used to treat primary
2 carcinoma of the breast in an exercise
3 designed to find the primary tumor to have
4 sectioned the breasts?

5 A. If there was still a question and if the
6 adenocarcinoma on the pathology slides was
7 suggestive of breast cancer, yes, they would
8 have sectioned the breasts.

9 Q. And there's no way to critically analyze
10 Dr. Kocoshis's palpation, is there?

11 A. Well, I suspect he's palpated thousands of
12 people. Thousands of females as well as
13 males.

14 Q. But my point, though, I don't mean to be
15 facetious, there's no way for anyone else to
16 do that same palpation and see if they agree
17 or disagree with Dr. Kocoshis.

18 A. Well, the point is that they were palpated
19 before. This lady was a nurse, so she would
20 have, I'm sure, have done -- I mean, she
21 would have known what we were doing.
22 Dr. Sprunger evaluated her breasts; I
23 evaluated her breasts; Dr. Songer, who is an
24 expert on breast cancer, I mean, that's what
25 he primarily does, one of the things he

1 Dr. Kocoshis this -- that all the evidence
2 pointed to a primary lung cancer.
3 Therefore, he did not do it because -- I
4 mean, how was he to know that this was going
5 to end up in a lawsuit, or whatever this is,
6 seven years later. Okay? He did what was
7 normal at the time. This was not a
8 conspiracy or anything else.

9 Q. Dr. Turner, this is not a lawsuit that
10 involves a claim that you or Dr. Songer or
11 the hospital failed to perform at a level of
12 reasonable care.

13 A. I know. We didn't.

14 Q. This is a forensic exercise where we are, in
15 hindsight, going back and trying to
16 determine what information you had and when
17 you had it and when and how you formed your
18 opinions.

19 And my question to you is, is there --
20 there is, regardless of how experienced
21 these doctors are and how much you trust
22 them and how much we all might come to
23 conclude that they're experienced doctors,
24 there is no way for anyone to critically
25 analyze that breast tissue for the presence

Page 338

Page 340

1 primarily does, evaluated the breasts. If
2 there was any question that there was a
3 nodule there, they would have sectioned
4 those breasts.

5 Q. But my point is, is the only way any of us
6 can critically analyze that question would
7 have been for somebody to section the
8 breasts and create slides that pathologists
9 could have looked at.

10 A. I don't think so.

11 Q. Well, I mean -- I mean, if -- we have to
12 take -- I mean, and I don't -- the point is,
13 we have to take your word, Dr. Sprunger's
14 word, and Dr. Kocoshis's word, but we can't
15 critically palpate or critically analyze
16 those opinions because there's nothing for
17 us to review, right?

18 A. This is -- okay, this lady died, okay?
19 Let's look at the scenario here. This lady
20 died. From all the information that we had,
21 including the fine needle aspiration, this
22 was a primary lung cancer. All the other
23 evidence that we had pointed to a primary
24 lung cancer. Why would we do -- I mean, I
25 suspect -- and you'll have to ask

1 or absence of tumor because they weren't
2 sectioned. Isn't that right?

3 A. There is no way that we can go back and say
4 there was not a primary cancer there; is
5 that what you're asking?

6 Q. No. There is no way for any of us to
7 critically analyze the statement that a
8 gross evaluation of the breasts was
9 completed with palpation and this was
10 negative, because we have no pathological
11 material, no breast tissue, that we can look
12 at under the microscope.

13 A. I don't think that's true because of the
14 number of palpations of that breast tissue.
15 I mean, I was just looking here at the
16 colon. I mean -- I mean -- I mean, you
17 don't, if -- if the direction is not there,
18 you -- you'll have to ask Dr. Kocoshis why
19 he did not do this, but that is not unusual.

20 Q. Did you ever order a mammogram in this case?

21 A. She was too sick.

22 Q. So the answer is no, you did not order a
23 mammogram.

24 A. Plus the fact she had one in September or
25 October, I believe, of '90.

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 341	Page 343
<p>1 Q. The answer to the question is, no, you did 2 not order a mammogram? 3 A. Did not order it because she was too sick 4 and the fact she had just had one within the 5 last year. And that my palpation was 6 negative, Dr. Sprunger's palpation was 7 negative, Dr. Songer's palpation was 8 negative. 9 Q. You see in down here in Exhibit 3 where it 10 says you talked with Dr. Kocoshis and asked 11 him who else would look at the slides? 12 A. Yes. 13 Q. Why did you want someone else to look at the 14 slides? 15 A. For critical evaluation. 16 Q. And who did you have look at them? 17 A. I can't remember. 18 Q. And what were the results? 19 A. Well, we had -- my understanding is I sent 20 them to a physician or pathologist down at 21 one of the hospitals down in Indianapolis 22 and they looked at the slides and they 23 looked at the clinical history and came up 24 with the diagnosis of primary lung cancer, 25 adenocarcinoma of the lung.</p>	<p>1 Dr. Songer didn't start aggressive 2 chemotherapy; right? 3 A. Yes. 4 Q. Why were you trying to determine that? 5 A. To go through the chart and make sure that 6 everything was completed as best we could. 7 Q. Well, why were you interested in determining 8 the reason why aggressive chemotherapy 9 wasn't started with respect to Mrs. Wiley? 10 A. Again, to try to make sure -- or not make 11 sure, really. We did the best we could in 12 the situation. I mean, this was two years 13 after she died. We wanted to go through the 14 chart and see what each of us were thinking 15 and why we did what we did. 16 Q. Did Dr. Songer have a limited recollection 17 of this medical case at the time you had 18 this conversation with him? 19 A. I believe he did. 20 Q. And did he tell you that if the chart had 21 indicated he had started aggressive 22 chemotherapy then he would be more willing 23 or comfortable testifying about the 24 diagnosis of Mrs. Wiley's cancer? 25 A. I can't tell you that for sure. If it</p>
Page 342	Page 344
<p>1 Q. And who was that? 2 A. I can't remember their name. 3 Q. Did they send you a report? 4 A. I don't -- they didn't send me a report, no. 5 Q. Did they send you any report about -- have 6 you ever been -- have you ever talked with 7 them about their findings? 8 A. When they called me on the phone. 9 Q. What did they tell you? 10 A. That this is unequivocally primary lung 11 cancer due to adenocarcinoma. 12 Q. Now, then you had a talk with Dr. Songer. 13 By the way, did you ever ask anyone at 14 the Mayo Clinic to look at these slides? 15 A. I can't remember. I may have or may not. 16 If it's not in here, I did not talk, you 17 know, or may have and not put it in here. 18 Q. Then you and Dr. Songer had a long 19 discussion; right? 20 A. Yes. That's what it says. 21 Q. And you and he reviewed the chart to 22 determine what Dr. Songer's frame of mind 23 was? 24 A. Yes. 25 Q. And you were trying to determine why</p>	<p>1 doesn't say that here I can't tell you that 2 for sure. You'll have to ask him. 3 Q. Well, these are your words. It says, "If 4 his frame of mind at the time --" the time 5 of the treatment -- "was the fact that we 6 were most likely adenocarcinoma, that would 7 help him make a decision about what he could 8 testify to." Did he tell you that if, if in 9 this case he didn't remember, that he was 10 using aggressive chemotherapy, then that 11 would be more consistent with an opinion on 12 his part, at the time, that he was dealing 13 with an adenocarcinoma? 14 A. The question is -- I'm really -- I'm about 15 spent out here. 16 Q. We'll take a break. This is what I want to 17 ask you -- 18 A. The question is -- the question is -- 19 Q. Dr. Songer wanted to look at the chart, he 20 wanted to talk about it with you to help 21 determine his frame of mind at the time of 22 the treatment. 23 A. Yes. Yes. 24 Q. Did he tell you that if the chart indicated 25 that there was aggressive chemotherapy being</p>

Page 345

1 used, then that would be more consistent
2 with an opinion or belief on his part at the
3 time that he was dealing with an
4 adenocarcinoma?
5 A. Okay. "We are going to review the chart to
6 see what his frame of mind was and why we
7 didn't start aggressive chemotherapy. If
8 his frame of mind at the time was the fact
9 we were most likely adenocarcinoma, that
10 would help him make a decision about what he
11 could testify to."

12 Now, you're stating that if he started
13 aggressive chemotherapy, that would be --

14 Q. My question to you is, yes, did he tell you
15 if the chart indicated aggressive
16 chemotherapy, that would refresh his
17 recollection or indicate to him that he was
18 treating an adenocarcinoma?

19 A. I can't tell you from what those statements
20 are. I can't tell you. Did you ask him
21 that?

22 Q. Not yet.

23 A. Okay. Well, maybe you should ask him that
24 because, from that point of view, I mean,
25 review the chart, see what his frame of mind

Page 346

1 was and why we didn't start aggressive
2 chemotherapy. If his frame of mind at the
3 time was the fact we were most likely
4 adenocarcinoma, that would help him make a
5 decision as to what he could testify to.

6 Now, to go from one sentence to another, I
7 don't want to do that without knowing what
8 I'm saying is correct.

9 Q. Well, you and Dr. Songer have discussed this
10 subject, haven't you?

11 A. Yes.

12 Q. And you discussed it --

13 A. What subject are you talking about?

14 Q. Well, the subject of your treatment of
15 Mrs. Wiley.

16 A. Yes.

17 Q. And you discussed this exhibit and these
18 notes with Dr. Songer, haven't you?

19 A. I have not talked to him about this. We
20 both have this. We both read it. But we
21 have not talked back and forth and looked at
22 things. I mean...

23 Q. Well, you both went to a meeting last week
24 with Mr. Cross and some other lawyers.
25 didn't you?

Page 347

1 A. Yes, but we don't -- I mean, we look at
2 things from our objective. I mean, our own
3 objective. And we don't compare notes. We
4 don't, I mean --

5 Q. Let me put it this way.

6 A. I don't think you want us to compare notes.
7 do you?

8 Q. Dr. Turner, as of May 24, 1993, is it fair
9 to say that Dr. Songer had not expressed an
10 opinion to you that either he believed
11 Mrs. Wiley suffered from a primary
12 adenocarcinoma of the lung or that he was
13 treating her for a primary adenocarcinoma of
14 the lung?

15 A. He was not treating her from at least the
16 chart. And again, he was trying to go back
17 and remember this chart. You know, he's
18 very, very busy. I'm very, very busy. We
19 have hundreds of thousands of patients. And
20 if there was something definitive that would
21 have said that I would have said that in
22 this note. These notes are essentially -- I
23 dictated them so that I could remember what
24 was occurring at that time.

25 Q. And what was occurring was you talking to

Page 348

1 Dr. Songer. Among other things what was
2 occurring was Dr. Songer telling you that at
3 this point, May 24, 1993, he wasn't either
4 comfortable or willing to testify about the
5 diagnosis or cause of Mrs. Wiley's lung
6 cancer.

7 A. For certain. Is that what you're asking?

8 Q. Well, I'm asking you. I mean, what was he
9 telling you in May of 1993 about his --

10 A. I said, "When I talked to Dr. Songer today,
11 he stated that he could not get up on a
12 witness stand and state that this
13 unequivocally was related to lung cancer
14 because of an elevated CA15-3."

15 Q. But then you and he decided you were going
16 to do something else. You were going to
17 review the chart --

18 A. Yes.

19 Q. -- to see what his frame of mind was. What
20 relationship did that have to his
21 willingness to testify?

22 A. We were going to review his chart to see
23 what his frame of mind was and why we didn't
24 start -- if his frame of mind at the time
25 was the fact we were most likely adeno, that

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 349	Page 351
<p>1 would help him make a decision as to what he 2 could testify to. 3 Q. Why is my question -- 4 A. The only thing I can think of is that, 5 first -- you've never taken care of 6 critically ill patients, have you? No. 7 The only thing I can think of is that 8 he -- if this was, indeed, an 9 adenocarcinoma -- the problem was, she was 10 so far gone. That's the problem. I mean, 11 that's the problem. I mean, even if this -- 12 I mean, he couldn't start aggressive 13 chemotherapy because this lady was dying, 14 okay? This lady was in horrible, horrible 15 shape. And she was in horrible pain. 16 And -- 17 Q. But my question, Doctor -- 18 MR. CROSS: Let her finish the 19 answer. 20 MR. OHLEMEYER: I am. 21 A. I don't know what you want me to answer. I 22 mean, you're trying to correlate -- you're 23 trying to take two sentences and hook them 24 together and come out with a third one and I 25 can't do that. I think you need to ask</p>	<p>1 A. "Also of note, the negative staining on the 2 path report of the cancer cells shows that 3 maybe there was a faint mucin secreting 4 tumor. It is difficult to say that it is 5 definitely negative. I also talked to 6 Dr. Triplett regarding electromicroscopy. 7 He felt that this would be a waste of time." 8 Q. I want to ask you about the mucin. Why did 9 you think -- what's the significance of 10 whether the tumor secretes or did not 11 secrete mucin? 12 A. There are certain types of adenocarcinoma 13 that would secrete mucin. 14 Q. And there are certain types that would not? 15 A. Yes. 16 Q. And is it fair to say, Doctor, that if this 17 was a tumor that did not secrete mucin, it 18 would be less likely to be a primary 19 adenocarcinoma of the lung? 20 A. I can't tell you that. I'm not a 21 pathologist. 22 Q. So that's another area of -- 23 A. You need to talk to a pathologist about. 24 Q. So one other way to critically analyze your 25 opinion would be to determine whether this</p>
Page 350	Page 352
<p>1 Dr. Songer this. 2 Q. But that's my question, is those two 3 sentences are your two sentences, they are 4 hooked together, and I'm asking you to come 5 up with a third one. And if you can't, you 6 can't. That's all I'm asking, Doctor. 7 A. I can't come up with a third question 8 because these notes are just things I 9 dictated on the phone off the cuff. This is 10 not a legal -- it wasn't a legal document 11 until it disappeared sometime and comes up. 12 You know, I dictate things -- dictate things 13 all the time. But, I mean, you know, you're 14 asking me to fill in blanks. It's not like 15 I went from one to two to three to four 16 here. I mean, I can't answer your question. 17 You'll have to ask Dr. Songer. 18 Q. Last question, we'll break for lunch. 19 On the next page it says, "Also of 20 note, the negative mucin staining on the 21 path report of the cancer cells shows maybe 22 there is a faint mucin secreting tumor." 23 A. Yep. 24 Q. "It is difficult to say that it is 25 definitively negative."</p>	<p>1 was a mucin-secreting tumor and compare that 2 fact to the collective information. 3 A. Yes. 4 MR. OHLEMEYER: Let's take a lunch 5 break. 6 (A lunch recess was taken.) 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25</p>

Page 353	Page 355
<p>AFTERNOON SESSION</p> <p>(Deposition Exhibit(s) 23-25 marked for identification.)</p> <p>BY MR. OHLEMEYER:</p> <p>Q. Doctor, if you don't understand a question, will you let me know?</p> <p>A. Yes.</p> <p>Q. When you perform a mammogram on a patient, do you need to have a consent form signed or do you have to get the patient's consent to do that?</p> <p>A. Well, you would like to inform them if you're going to take them down to x-ray and do something like that to them, yes.</p> <p>Q. Are there any risks that you inform them of in connection with the mammogram?</p> <p>A. There may be some bruising. That's primarily the number one risk I would suspect. I mean the radiation, I'm not a radiologist, but the radiation impact would be minimal.</p> <p>Q. Is bleeding, collapsed lung, or death a risk of mammography?</p> <p>A. If it was the person should shut down the</p>	<p>A. Do I have any --</p> <p>Q. Information from whatever source about Mrs. Wiley's potential exposure to radon.</p> <p>A. Now or then?</p> <p>Q. Well, let's talk about then, let's talk about now.</p> <p>A. Yes.</p> <p>Q. Then?</p> <p>A. Then, if I did not put it down there, then I probably did not.</p> <p>Q. Okay. Now do you?</p> <p>A. Well, from that note on my dictation, I stated, I think it was the 20th of July, I stated that --</p> <p>Q. June 7th, I think. Let me rephrase the question, might make it easier. Have you acquired any information since June 7th of 1993 from any source about Mrs. Wiley's potential exposure to radon?</p> <p>A. My understanding, from the information I received, it was low level exposure.</p> <p>Q. And that was your understanding in June of '93?</p> <p>A. Well, it depends on when I can find these notes. If I stated it in June 7th versus</p>
Page 354	Page 356
<p>radiology department.</p> <p>Q. Okay. Is bleeding and collapsed lung and death a risk of transthoracic needle biopsy?</p> <p>A. Bleeding, collapsed lung, and death, yes, it would be, yes.</p> <p>Q. Which procedure is more painful to the patient, a mammogram or a transthoracic needle biopsy?</p> <p>A. More painful to the patient.</p> <p>Q. Maybe let me rephrase the question. Which procedure has the potential to be more painful? I take it you try to avoid pain, but of the two procedures, which is relatively more painful?</p> <p>A. More painful or more risky?</p> <p>Q. More painful.</p> <p>A. Depends on the radiology person that's doing it. I mean, you know, some women say a mammography is more painful than a transthoracic biopsy.</p> <p>Q. Which is more invasive?</p> <p>A. Transthoracic biopsy.</p> <p>Q. Doctor, do you have any information, from any source, about Mrs. Wiley and radon exposure?</p>	<p>July 20th, you know, I need to look at these to see when I dictated it.</p> <p>Q. Well, let me rephrase the question then.</p> <p>MR. CROSS: Well, you've asked it twice, counsel, why don't you let her find her notes and answer it.</p> <p>MR. OHLEMEYER: Okay, go ahead.</p> <p>THE WITNESS: Which one is it?</p> <p>MR. CROSS: It's June 7th.</p> <p>A. June 7th.</p> <p>Q. Of '93.</p> <p>A. Okay. So it says, "Since this patient had no other source of known carcinogen including the fact that radon levels in her house were extremely low or non-existent by history, I feel that there is indeed a direct relationship to her exposure of --"</p> <p>Q. Let me stop you there. The "by history" is information you obtained from the attorneys?</p> <p>A. It must have been.</p> <p>Q. And my question, then, is since that time, since June of 1993, have you acquired any information from any source about Mrs. Wiley's, or the potential --</p> <p>Mrs. Wiley's potential exposure to radon</p>

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 357	Page 359
<p>1 throughout her life?</p> <p>2 A.No.</p> <p>3 Q.Would you agree with me, Doctor, that radon</p> <p>4 exposure represents a risk to health of</p> <p>5 substantial magnitude?</p> <p>6 A. There are lung cancers related to radon</p> <p>7 exposure.</p> <p>8 Q.As a practical matter, do you think exposure</p> <p>9 to radon represents a risk to health of</p> <p>10 substantial magnitude?</p> <p>11 A. Well, substantial is the key word. There</p> <p>12 are a number of deaths in nonsmokers and</p> <p>13 smokers due to radon.</p> <p>14 Q.Do you know whether --</p> <p>15 A.But it's primarily, my understanding is,</p> <p>16 tobacco exposure is synergistic with radon</p> <p>17 exposure just like asbestos is synergistic</p> <p>18 with radon exposure -- I'm sorry,</p> <p>19 synergistic with tobacco exposure to</p> <p>20 increase the risk of lung cancer.</p> <p>21 Q.I want to make sure you haven't misstated</p> <p>22 something; when you say tobacco exposure,</p> <p>23 what you mean is primary smoking.</p> <p>24 A.I'm not saying that.</p> <p>25 Q.Tell me, quote me, show me where the</p>	<p>1 expert in this area. But we know that</p> <p>2 environmental tobacco smoke has a -- is --</p> <p>3 can be more toxic than primary smoking</p> <p>4 because of the number of chemicals that come</p> <p>5 out of the end of that cigarette.</p> <p>6 MR. OHLEMEYER: Will you repeat my</p> <p>7 question, please.</p> <p>8 (The requested material was read back</p> <p>9 by the reporter.)</p> <p>10 Q.Let's take this one at a time, Doctor. Are</p> <p>11 you suggesting to me that there is</p> <p>12 literature or evidence to suggest that there</p> <p>13 is a synergistic relationship between radon</p> <p>14 exposure and exposure to cigarette smoke?</p> <p>15 A.You're asking is there literature existing</p> <p>16 that there's a synergistic exposure to</p> <p>17 cigarette smoking or cigarette smoke --</p> <p>18 Q.Smoke and radon exposure.</p> <p>19 A.And radon.</p> <p>20 Q.As it relates to the development of lung</p> <p>21 cancer.</p> <p>22 A.Yes, there is.</p> <p>23 Q.My question to you is, does that literature</p> <p>24 suggest that it is exposure to tobacco smoke</p> <p>25 in general or does the literature suggest or</p>
Page 358	Page 360
<p>1 evidence is that tobacco exposure as opposed</p> <p>2 to primary smoking is suggested to work</p> <p>3 synergistically with radon exposure to</p> <p>4 produce lung cancer.</p> <p>5 A.I think you need to talk to an</p> <p>6 epidemiologist or a person from like the</p> <p>7 Environmental Protection Agency or those</p> <p>8 type of individuals to get that conclusion</p> <p>9 and to get the evidence. I'd have to go</p> <p>10 back through a number of literature to do</p> <p>11 that.</p> <p>12 Q.So as we speak, you're not sure whether the</p> <p>13 evidence suggests that it's tobacco exposure</p> <p>14 as opposed to primary smoking that may or</p> <p>15 may not act synergistically with radon</p> <p>16 exposure.</p> <p>17 A.Well, we know that since environmental</p> <p>18 tobacco smoke comes out of the end of a</p> <p>19 cigarette, we know that environmental</p> <p>20 tobacco smoke has more -- has more toxic</p> <p>21 chemicals, because the end of the cigarette</p> <p>22 is smoldering, the temperature of</p> <p>23 incineration is lower, the particulate</p> <p>24 material -- I mean, this is my</p> <p>25 understanding. Again, you could get an</p>	<p>1 indicate that it is the act of primary</p> <p>2 smoking, act of smoking that demonstrates</p> <p>3 that relationship?</p> <p>4 A.When they say tobacco smoke --</p> <p>5 Q.I don't want to interrupt you.</p> <p>6 A.I can't put words in a researcher's mouth.</p> <p>7 Q.That's my question. Is it your recollection</p> <p>8 that those words are tobacco smoke or</p> <p>9 cigarette smoking, the act of smoking?</p> <p>10 A.My recollection is tobacco smoke.</p> <p>11 Q.So to the extent that evidence or those</p> <p>12 studies are limited to active smokers, then</p> <p>13 they -- do you believe -- well, strike that.</p> <p>14 To the extent that those studies are</p> <p>15 limited to active smoking, then your</p> <p>16 recollection or your assumption is</p> <p>17 incorrect, isn't it?</p> <p>18 A.You're asking is the -- it depends on</p> <p>19 whether the tobacco smoke -- I mean, I can't</p> <p>20 tell you, I'm not an epidemiologist, I'm not</p> <p>21 a research person in this field. What I'm</p> <p>22 telling you is from what I've read that it</p> <p>23 talks about radon exposure and tobacco</p> <p>24 smoke.</p> <p>25 Q.And Doctor, in applying what you have read</p>

Page 361	Page 363
<p>1 to situations such as this, do you think</p> <p>2 it's important to have a clear or accurate</p> <p>3 understanding of what it is that's being</p> <p>4 described in those studies you've read?</p> <p>5 A. Yes.</p> <p>6 Q. Now, do you know whether the EPA considers</p> <p>7 exposure to indoor radon as one of the</p> <p>8 highest carcinogenic risks under its</p> <p>9 jurisdiction?</p> <p>10 A. It's one of the six known carcinogenic</p> <p>11 agents. EPA has listed six.</p> <p>12 Q. Does the EPA rank exposure to indoor radon</p> <p>13 as one of the highest carcinogen risks under</p> <p>14 its jurisdiction?</p> <p>15 A. By this table, it's the second highest.</p> <p>16 Q. What's highest?</p> <p>17 A. ETS, environmental tobacco smoke.</p> <p>18 Q. To the extent that your assumption is</p> <p>19 incorrect, might that have an effect on your</p> <p>20 opinion in this case?</p> <p>21 A. My assumption of what is incorrect?</p> <p>22 Q. Where and how the EPA ranks exposure to</p> <p>23 indoor radon as it relates to the risk of</p> <p>24 developing cancer.</p> <p>25 A. You're asking if I -- that would change my</p>	<p>1 ranks ETS exposure above radon in terms of</p> <p>2 risk to health. I'm asking you to assume</p> <p>3 for me that you're wrong, that they rank</p> <p>4 radon higher than ETS.</p> <p>5 Is that information that you would want</p> <p>6 to use in reevaluating your opinion in this</p> <p>7 case and critically analyzing it?</p> <p>8 A. I would use that to critically analyze.</p> <p>9 Q. Do you know whether the EPA estimates that</p> <p>10 more or less deaths per year occur as a</p> <p>11 result of exposure to radon as opposed to</p> <p>12 exposure to environmental tobacco smoke?</p> <p>13 MR. CROSS: Well, counsel, I will</p> <p>14 object. This was gone into at some length</p> <p>15 in the morning session, you've asked that</p> <p>16 question at least twice and she's answered</p> <p>17 it.</p> <p>18 Q. Well, Doctor, can you answer the question</p> <p>19 for me?</p> <p>20 A. Your question is?</p> <p>21 Q. Does the EPA consider exposure to radon to</p> <p>22 produce more or less lung cancer each year</p> <p>23 in this country than exposure to</p> <p>24 environmental tobacco smoke?</p> <p>25 MR. CROSS: Do you have the</p>
Page 362	Page 364
<p>1 opinion: is that what you're asking?</p> <p>2 Q. Would it affect your opinion. Would it be</p> <p>3 something you'd have to consider in</p> <p>4 reevaluating your opinion?</p> <p>5 A. If I -- would I use that to change my</p> <p>6 opinion: is that what you're asking? Would</p> <p>7 you read the question back, please.</p> <p>8 Q. I'll rephrase the question. Doctor. If you</p> <p>9 are, in fact, incorrect about how the EPA</p> <p>10 ranks radon as a carcinogenic risk relative</p> <p>11 to other risks to health, might that</p> <p>12 information cause you to reevaluate, would</p> <p>13 that be information you would have to use in</p> <p>14 reevaluating your opinion in this case?</p> <p>15 MR. CROSS: What opinion is that?</p> <p>16 MR. OHLEMEYER: About the cause of</p> <p>17 Mrs. Wiley's cancer.</p> <p>18 A. You're asking if I -- if radon is, indeed, a</p> <p>19 causative agent for lung cancer.</p> <p>20 Q. Doctor, I'm asking you whether you agree or</p> <p>21 disagree with this statement: The EPA ranks</p> <p>22 exposure to indoor radon as one of the</p> <p>23 highest carcinogenic risks under its</p> <p>24 jurisdiction.</p> <p>25 You have told me that you believe it</p>	<p>1 publication that you're referring from?</p> <p>2 You're giving her another memory test here.</p> <p>3 Q. Doctor, you understand the question.</p> <p>4 A. Yes.</p> <p>5 Q. And do you understand that you can answer it</p> <p>6 yes or no or I don't know?</p> <p>7 A. My understanding is, from the literature</p> <p>8 that I have reviewed, that there are around</p> <p>9 4,000 deaths, 3- to 4,000 deaths from</p> <p>10 environmental tobacco smoke.</p> <p>11 Q. And how many deaths as a result of lung</p> <p>12 cancer each year does the EPA attribute to</p> <p>13 residential exposure to radon?</p> <p>14 A. I believe it's around 3- to 4,000.</p> <p>15 Q. Do you know whether the carcinogenicity of</p> <p>16 radon has been demonstrated in experimental</p> <p>17 animals?</p> <p>18 A. I'm not a research -- that has not been a</p> <p>19 research area that I have enlisted in.</p> <p>20 Q. Do you know whether it is possible to</p> <p>21 identify lung cancers caused by radon</p> <p>22 exposure as opposed to lung cancers believed</p> <p>23 to be caused by cigarette smoke or other</p> <p>24 substances?</p> <p>25 A. Now, repeat that question.</p>

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 365

Page 367

1 Q. Is it possible to identify lung cancers, to
2 look at the cancer and to determine that it
3 was caused by radon exposure as compared to
4 a lung cancer caused by cigarette smoke or
5 some other substance?
6 A. I cannot tell you.
7 Q. Do you know whether at a cellular level lung
8 tumors look the same although they have
9 different causes?
10 A. Lung tumors from oat cell carcinoma -- being
11 not a pathologist, you would need to talk to
12 a pathologist.
13 Q. Do you know how one could go about obtaining
14 information about an individual's historical
15 exposure to radon?
16 A. Well, I suspect most people, you could ask
17 them.
18 Q. Well, let me stop you there. How would
19 somebody know whether or if they'd been
20 exposed to radon?
21 A. They would have to take measurements.
22 Q. How would they do that?
23 A. I believe there's an instrument that they
24 could buy to look at that.
25 Q. And what would you do with that information

1 off an old steam pipe in the hospital and I
2 breathe it.
3 A. Yes.
4 Q. Can that one fiber cause lung cancer?
5 A. I can't tell you that.
6 Q. How many would I have to breathe?
7 A. I can't tell you that. It depends on the
8 level of exposure, where it lands.
9 Q. I know Mr. Young has already thrown his
10 penny in the fountain and wished for that.
11 MR. YOUNG: I hope the record won't
12 reflect that.
13 Q. I apologize, Doctor. The lawyers were
14 laughing about something that I thought I
15 had a sense of what they were laughing
16 about. And I don't mean to waste your time.
17 Had you completed your answer? I mean.
18 the question was how much asbestos does it
19 take --
20 A. Depends on where it lands, what happens to
21 it. Obviously, it depends on the level of
22 exposure. The intensity of the exposure.
23 Q. The duration and the intensity and the
24 frequency of an exposure as well as the fate
25 of that exposure in the body?

Page 366

Page 368

1 in terms of determining whether or if that
2 level of exposure presented a risk to
3 health?
4 A. Since I'm not a biochemist or an
5 environmental protection person or a
6 specialist in that area, I would suspect
7 that you would need to ask them.
8 Q. Same thing for asbestos?
9 A. Well, asbestos, when we have a patient with
10 lung cancer as related to asbestos, there
11 are clinical signs that occur.
12 Q. Such as?
13 A. Calcification. First of all, individuals
14 are much more likely to know that they've
15 been exposed to asbestos than otherwise,
16 especially an adult person. And the
17 clinical presentation, the calcifications
18 along the pleura, there's usually cake -- or
19 calcification scalloping along the pleural
20 space.
21 Q. Can exposure to one asbestos fiber cause
22 lung cancers?
23 A. One asbestos fiber. You mean somebody
24 inhaled one single asbestos fiber?
25 Q. Let's assume that one asbestos fiber sloughs

1 A. Again, I'm not a pathologist or
2 epidemiologist.
3 Q. I'm sorry, I'm thinking out loud, but I want
4 to ask you whether you agree with me. In
5 determining whether a suspect -- we've used
6 the word "carcinogen." Am I correct a
7 carcinogen is typically defined as a
8 substance believed to or suspected of
9 causing cancer in individuals; right?
10 A. Individuals or --
11 Q. People.
12 A. -- people or rats or mice or --
13 Q. Well, that's the distinction I want to draw:
14 is in animals you can perform experiments to
15 see if exposure to that substance produces
16 the result that you are suspicious for.
17 Right?
18 A. Yes.
19 Q. In people, you can study groups of people.
20 try to determine whether they have similar
21 histories of exposure and observe how
22 frequently you find the disease in groups of
23 people; right?
24 A. Normally what they do is they look at a
25 group of people, groups of people, decide

Page 369

1 how much cigarettes, heart disease or
2 whatever, and study those.
3 Q. But my question really is, is with respect
4 to people, is it fair to say that the
5 duration, the intensity, the frequency of
6 exposure to a suspected carcinogen will play
7 a role in determining whether that person
8 develops cancer as a result of that
9 exposure?
10 A. And I would suspect their genetic makeup,
11 yes.
12 Q. And even add to that the fate, how the body
13 deals with that exposure; right?
14 A. Yes.
15 Q. Because the body has certain defense
16 mechanisms it can bring to bear on exposure
17 to certain things; right?
18 A. If those body mechanisms work.
19 Q. In fact --
20 A. Well --
21 Q. -- there are some carcinogens that we are --
22 "we" being you and I and others -- are
23 exposed to in different aspects of our
24 everyday life; right?
25 A. Air, water, food, what?

Page 370

1 Q. Well, are there carcinogens in the food we
2 eat?
3 A. Pesticides, possibly.
4 Q. Are there carcinogens in the air we breathe?
5 A. Depends on where you breathe. I try to
6 protect my air.
7 Q. Well, when you're driving down the highway
8 on a busy street or a busy road, is it
9 possible, or is it likely there are
10 carcinogens in the area as a result of the
11 combustion of fossil fuel?
12 A. Anything is possible. But, again, it has to
13 do with how much you inhale, a lot of
14 different things.
15 Q. Duration, intensity, frequency, genetic
16 makeup, and the fate of the substance once
17 it's ingested or inhaled; right?
18 A. You really would need to talk to an
19 epidemiologist or a biochemist regarding
20 that and look at the numbers. You know,
21 what you're doing is you're pulling things
22 out way back here and pulling it in.
23 Q. Well, here's my question, Doctor. You
24 believe environmental tobacco smoke to be a
25 carcinogen.

Page 371

1 A. It contains carcinogenic agents. Thousands
2 of carcinogenic agents.
3 Q. Is that your testimony, that there are
4 thousands of carcinogenic agents in
5 environmental tobacco smoke?
6 A. Depends on the amount of tobacco smoke
7 that's in a room.
8 Q. Well, Doctor, how many substances have been
9 identified in environmental tobacco smoke
10 that are suspected of producing cancer in
11 experiments?
12 A. My understanding, there's approximately 50
13 in one -- in the tobacco smoke that comes
14 off of an end of a cigarette.
15 Q. And how many of those substances -- I may
16 have asked you this, I don't mean to repeat,
17 but am I correct there is no single
18 substance in that group that is found only
19 in environmental tobacco smoke.
20 A. There is no single substance in that group.
21 I can't tell you that.
22 Q. So is it fair to say that some of the things
23 that you believe to be present in
24 environmental tobacco smoke that you believe
25 to be carcinogens may be substances that

Page 372

1 individuals are exposed to in other aspects
2 of their life separate and apart from any
3 potential exposure to environmental tobacco
4 smoke?
5 A. What you're asking is -- what you're asking
6 is, is there -- does environmental tobacco
7 smoke have a group of carcinogenic agents in
8 it that may be in other areas. Or better
9 yet, what you're asking, I suspect, is the
10 density of carcinogenic agents in this one
11 substance is equal to other areas.
12 Q. Doctor, the question is very simple. You've
13 told me that you believe there are
14 carcinogens in environmental tobacco smoke.
15 A. That has been proven, yes.
16 Q. And when you say carcinogens, you mean
17 substances that have been demonstrated in
18 other experiments, not involving
19 environmental tobacco smoke, to produce
20 cancer in animals.
21 A. I can't tell you that.
22 Q. Well, my question is, are any of those
23 substances unique to environmental tobacco
24 smoke? Are any of the substances that you
25 believe to be carcinogens that are present

Page 369 - Page 372

STEWART-RICHARDSON & ASSOCIATES
COURT REPORTERS (317) 237-3773

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 373

1 in environmental tobacco smoke found only in
 2 environmental tobacco smoke or could I find
 3 any of those substances in either air or
 4 food or water or other --
 5 A. You would need to get a scientist that his
 6 field of study is this and ask him those
 7 questions.
 8 Q. So you can't tell me whether there are
 9 substances in environmental tobacco smoke
 10 that are believed to be carcinogens that
 11 somebody, including Mrs. Wiley, might have
 12 been exposed to at some other point in her
 13 life or as a result of some other exposure
 14 in her life.
 15 A. What you need to do is get a scientist that
 16 that field of research is that, those
 17 chemicals and environmental tobacco smoke,
 18 and ask him that question.
 19 Q. So the answer to my question is you can't
 20 tell me the answer to that question.
 21 A. I suggest that you get a scientist that has
 22 to do with that research and ask him because
 23 I don't want to tell you the wrong thing.
 24 Q. Do you know whether anyone has ever measured
 25 or taken any measurements in the Marion

Page 374

1 Veterans Administration Medical Center?
 2 A. I can't tell you that for sure, no.
 3 Q. Have you ever been there?
 4 A. Yes.
 5 Q. Were you ever there when Mrs. Wiley worked
 6 there?
 7 A. No. I don't think so. You mean in the ward
 8 itself or on the campus or what?
 9 Q. Well, let's talk about your understanding of
 10 where Mrs. Wiley worked. Were you ever
 11 present in those buildings during the years
 12 she worked there?
 13 A. No.
 14 Q. Have you ever taken or have you ever seen
 15 any measurements that anyone else has taken
 16 of the air quality in that ward?
 17 A. No.
 18 Q. Do you have any information beyond what
 19 Mrs. Wiley or Mr. Wiley may have told you or
 20 the attorneys for Mr. and Mrs. Wiley may
 21 have told you about the level, the
 22 frequency, duration, or the intensity of
 23 environmental tobacco smoke Mrs. Wiley may
 24 have encountered at that Veterans
 25 Administration Medical Center?

Page 375

1 A. All I have is from what -- from those
 2 sources.
 3 Q. How did you determine that Mrs. Wiley was
 4 exposed to enough environmental tobacco
 5 smoke to cause or to have caused her lung
 6 cancer?
 7 A. How did I determine that Mrs. Wiley was
 8 exposed --
 9 Q. To enough --
 10 A. -- to environmental tobacco smoke --
 11 Q. To have caused her lung cancer.
 12 A. From her history she stated and Mr. Wiley
 13 had stated that she had been exposed to this
 14 on a daily basis. My understanding is there
 15 was -- they told me there was a total haze
 16 in the area. That's what his word was --
 17 words were. And that when she came home she
 18 was -- smelled quite heavily of it. And
 19 that she was concerned that she was being
 20 exposed to this.
 21 Q. When did he tell you that?
 22 A. Well, from my history that I have, I
 23 probably -- I recollect that probably
 24 from -- from her -- from him. He probably
 25 told me during the time she was in the

Page 376

1 hospital. The other part of that was when I
 2 was looking back, in 1993, looking back at
 3 the case and clarifying data on the case.
 4 Q. And by that time, Mr. Wiley had already
 5 filed a claim against the Veterans
 6 Administration for compensation relating to
 7 his wife's exposure to environmental tobacco
 8 smoke at that facility.
 9 A. I don't know when he filed that.
 10 Q. Well, let me hand you --
 11 MR. OHLEMEYER: Let's mark this as
 12 the next in order.
 13 (Deposition Exhibit(s) 26 marked for
 14 identification.)
 15 (Discussion off the record.)
 16 Q. Doctor, this is Exhibit 26. Is that your
 17 signature there at the bottom? I know it's
 18 hard to read.
 19 A. Yes.
 20 Q. Date 4/28/92?
 21 A. Yes.
 22 Q. This is a form, apparently, that you were
 23 asked to fill out in connection with
 24 Mr. Wiley's claim against the Veterans
 25 Administration?

Page 377

Page 379

1 MR. CROSS: Excuse me, counsel.
 2 could I see that?
 3 MR. OHLEMEYER: I'm sorry.
 4 A.I don't know if --
 5 MR. CROSS: Just a minute, Doctor.
 6 Q.My question, Dr. Turner, is that by April of
 7 1992 somebody had asked you to state an
 8 opinion as to whether Mrs. Wiley's death was
 9 due to her employment. Isn't that right?
 10 A.Yes.
 11 Q.Okay. So prior to 1993 -- well, so my
 12 question then is, is if the discussion you
 13 had with Mr. Wiley occurred in 1993, that
 14 you just told me about, it would have
 15 occurred after he made his claim against the
 16 Veterans Administration.
 17 A.I would suspect so.
 18 Q.All right.
 19 A.Unless -- you know, I don't recall talking
 20 with him other than during the time that she
 21 was -- I have not seen him since the day she
 22 died. And so...
 23 Q.But you've been provided with information
 24 through the lawyers about Mr. Wiley's
 25 description or the description of others

1 had been exposed to certain substances that
 2 are suspected of causing primary carcinoma
 3 of the lung?
 4 MR. CROSS: Well, objection, that's
 5 a compound question. That is two totally
 6 distinct subjects there.
 7 Q.Doctor, do you understand the question?
 8 A.The question is, was there anything done:
 9 right?
 10 Q.Well, or are you --
 11 A.Or can they be?
 12 Q.Are you aware of any that have been done.
 13 Let's take it one at a time. Are you aware
 14 of any immunohistic test or biological test
 15 that has been performed to establish whether
 16 Mrs. Wiley had a primary carcinoma of the
 17 lung?
 18 MR. CROSS: Thank you.
 19 A.Not that I'm aware of.
 20 Q.Are you aware of any immunohistic chemical
 21 test or biological test that could be
 22 performed to establish whether she had a
 23 primary carcinoma of the lung?
 24 A.Histochemical. Well, given the --
 25 histochemical for adenocarcinoma?

Page 378

Page 380

1 about the Veterans Administration facility.
 2 haven't you?
 3 A.Yes.
 4 Q.And that occurred before or after April of
 5 '92?
 6 A.I can't tell you. I can't tell you for
 7 sure.
 8 Q.Okay.
 9 A.I don't really recall discussing much of
 10 this with anybody other than around the time
 11 of, you know, June, July of '93.
 12 Q.All right. Dr. Turner, do you know whether
 13 there is any type of immunohistic chemical
 14 test or any other biologic or genetic test
 15 that can be or has been performed to
 16 establish whether Mrs. Wiley had a primary
 17 lung cancer or whether her cancer was
 18 associated with exposure to certain
 19 substances?
 20 A>Your question is has it been done?
 21 Q.Are you aware of any immunohistic chemical
 22 test or any other biologic or chemical test
 23 that has been done or could be done to
 24 determine whether Mrs. Wiley had a primary
 25 carcinoma of the lung and whether or if she

1 Q.Primary carcinoma of the lung.
 2 A.Primary carcinoma of the lung. My
 3 understanding is there's no need to do that.
 4 But I'm not a pathologist. Maybe there's
 5 something new out that I don't know about.
 6 But adenocarcinoma of the lung would be
 7 diagnosed at the time of the transthoracic
 8 biopsy and the autopsy.
 9 Q.Are you aware of any immunohistic chemical
 10 test or other biological or genetic test
 11 that could be performed to establish whether
 12 Mrs. Wiley had a primary carcinoma of the
 13 lung?
 14 A.You need to ask a pathologist.
 15 Q.Have you been told or made aware of or
 16 become aware of any such tests that have
 17 been done in this case?
 18 A.My understanding, when we talked about it
 19 way back in July, there was some literature
 20 that could have -- that would have suggested
 21 that to be done.
 22 Q.And do you know whether that kind of test
 23 has been done?
 24 A.I can't be certain.
 25 Q.And can you tell me what literature that is?

Page 377 - Page 380

STEWART-RICHARDSON & ASSOCIATES
 COURT REPORTERS (317) 237-3773

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 381

1 A. Not in front of me, no.
 2 Q. Can you tell me what type of test it is?
 3 A. Some type -- I think it's a marker for some
 4 of the chemicals in secondhand smoke.
 5 Q. So as we sit here today, you don't know
 6 whether that test has been done?
 7 A. I can't be certain, no.
 8 Q. Have you talked with the lawyers about doing
 9 that kind of test?
 10 A. Back in July I did. July of '93 or whenever
 11 it was when I was -- when I was asked to
 12 look at the studies, when I was asked to
 13 look at this case, and look at the
 14 literature out there, that was in some of
 15 the literature that I looked at.
 16 Q. And to your knowledge, they've never come
 17 back to you and said, hey, we did a test and
 18 here are the results?
 19 A. They have not told me for sure that that has
 20 been done.
 21 Q. Have they told you for almost sure or unsure
 22 that's been done? I mean, I don't want to
 23 quibble with you, but you've been very
 24 careful with your words. Have they told
 25 you --

Page 382

1 A. I'm trying to be very careful with my words
 2 all along.
 3 Q. I know, that's why I asked. You said they
 4 haven't told you for sure it's been done.
 5 Have they told you they're thinking about it
 6 or considering it?
 7 A. My understanding is they were considering
 8 it. Now, whether they did it or not for
 9 sure, I can't tell you.
 10 Q. Would that kind of information make you more
 11 certain of your opinion or less certain of
 12 your opinion?
 13 A. If that was done, it would help me make a
 14 decision, yes.
 15 Q. Would you want to know the results of that
 16 kind of test regardless of what they
 17 indicated?
 18 A. Yes.
 19 Q. Would the results of such a test be helpful
 20 in critically analyzing your opinion?
 21 A. Depends on the percentages of the
 22 specificity. It depends on, you know, the
 23 percentages that it would be positive.
 24 Q. Specificity being how specific that type of
 25 test is to the substances at issue.

Page 383

1 A. Yes. Again, a biochemist with research in
 2 that area would be much -- would be an
 3 optimal witness.
 4 Q. Take a look at your death summary again.
 5 Exhibit 12. I can hand you a copy.
 6 A. I got it right here.
 7 Q. You see at the bottom of the page where it
 8 says, "Cytology revealed questionable
 9 squamous cell, therefore, a transthoracic
 10 biopsy was performed by Dr. Huss. This
 11 revealed an adenocarcinoma."
 12 A. Yes.
 13 Q. Can you show me where in the records the
 14 support is for that statement? I mean where
 15 did you -- from where did you -- what's the
 16 basis for your statement that that
 17 transthoracic biopsy revealed an
 18 adenocarcinoma?
 19 A. A transthoracic autopsy revealed, has to do
 20 with Dr. Baldwin's note.
 21 Q. The one where Dr. Baldwin said the two of
 22 them thought it might be adeno, one thought
 23 it might be a squamous cell?
 24 A. Yes.
 25 Q. So the pathology note does not say the

Page 384

1 transthoracic biopsy reveals an
 2 adenocarcinoma, does it?
 3 A. Let me look at that specific piece of paper
 4 and I will tell you. Okay. It says, "Fine
 5 needle aspiration, lung." So tissue
 6 received, fine needle aspiration. It says
 7 "fine needle aspiration"; that would be
 8 consistent with a transthoracic biopsy.
 9 Since I didn't do a fine needle aspiration,
 10 Dr. Sprunger didn't do a fine needle
 11 aspiration, only I had forceps.
 12 Q. I understand that. But that transthoracic
 13 biopsy, the pathologist who did the report
 14 on -- who rendered the pathological
 15 diagnosis didn't render it quite so
 16 succinctly as you did, did they? They don't
 17 say this reveals an adenocarcinoma, do they?
 18 A. It says, "Fine needle aspiration, lung,
 19 right upper lobe: Adenocarcinoma." There's
 20 no adverbs in there, but it says
 21 adenocarcinoma right there.
 22 Q. And it also says that Dr. Sandquist and
 23 Dr. Baldwin favor that diagnosis, whereas
 24 Dr. Brown favors a diagnosis of poorly
 25 differentiated carcinoma.

Page 385

Page 387

1 A. Yes.
 2 Q. That was the discrepancy we discussed
 3 earlier that somebody was going to check
 4 into and clarify for you.
 5 A. Yes.
 6 Q. And that, to your knowledge, was never
 7 checked into and clarified.
 8 A. Well, I don't think that's right. I mean,
 9 he did not put a note in the chart, but the
 10 point is, is that he did not make an
 11 addendum to this, either. And so if someone
 12 does not make an addendum, his diagnosis is
 13 adenocarcinoma, or he would have said we
 14 came back, reviewed the slides again,
 15 additional pathologist looked at the slides
 16 and this is our diagnosis. The fact that
 17 this is left in the chart, there's no other
 18 additional ones, makes me think that
 19 Dr. Baldwin, since he put his name down
 20 there, that he says this is adenocarcinoma.
 21 Q. Dr. Turner, has anyone in your family ever
 22 suffered from an illness that you attribute
 23 to exposure to tobacco smoke, either
 24 directly or indirectly?
 25 A. Yes.

Page 386

1 Q. Who?
 2 A. My father.
 3 Q. And was your father a cigarette smoker?
 4 A. Yes.
 5 Q. And I take it -- is your father alive?
 6 A. No. He's died.
 7 Q. When did he die?
 8 A. 1990.
 9 Q. And to what do you attribute his death?
 10 A. Tobacco.
 11 Q. What was the cause of his death?
 12 A. End stage pulmonary disease.
 13 Q. Secondary to what?
 14 A. Tobacco smoking.
 15 Q. Did he have lung cancer?
 16 A. We did not do an autopsy.
 17 Q. Are there other things that can cause end
 18 stage pulmonary disease besides tobacco?
 19 A. End stage pulmonary disease with severe
 20 emphysema and chronic bronchitis.
 21 Q. That's my question, Doctor. Are there other
 22 risk factors for those diseases?
 23 A. Extremely, extremely, extremely low. Heavy.
 24 I mean, heavy -- not really. Not to that
 25 extent, no.

1 Q. How long was your father sick before he
 2 passed away?
 3 A. He was probably ill for probably 15, 16, 17,
 4 18 years.
 5 Q. And what month in 1990 did he die?
 6 A. November.
 7 Q. It's fair to say, then, that your
 8 involvement with Mrs. Wiley occurred about
 9 six months after your father's death?
 10 A. About eight months, yes. But you have to
 11 understand I've been involved with a lot of
 12 patients in the eight months that my dad
 13 died.
 14 Q. Dr. Turner, do you know anything besides
 15 what is recorded in the material that we've
 16 marked already as exhibits about
 17 Mrs. Wiley's work schedule, her hours, her
 18 shifts?
 19 A. All I know is that, I think from someplace I
 20 read she had become a supervisor and that's
 21 all I know.
 22 Q. Do you know anything about the types of
 23 patients she cared for at the VA?
 24 A. No.
 25 Q. Do you know anything about how many patients

Page 388

1 were in the ward she worked or was
 2 responsible for at the VA?
 3 A. No.
 4 Q. Do you know anything about how many of those
 5 patients smoked cigarettes?
 6 A. No.
 7 Q. Do you know anything about how many of the
 8 nurses or other health care professionals
 9 she worked with smoked cigarettes?
 10 A. No.
 11 Q. Do you know anything about the smoking
 12 policy at the VA?
 13 A. Then or now?
 14 Q. Then.
 15 A. No.
 16 Q. Do you know anything about other chemicals
 17 Mrs. Wiley may have come in contact with as
 18 a result of her work as a nurse?
 19 A. No.
 20 Q. Have you ever looked at her employment
 21 records?
 22 A. No.
 23 Q. Have you ever talked with any of her
 24 co-workers?
 25 A. No.

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

<p style="text-align: right;">Page 389</p> <p>1 Q. Do you have a file on this case that you 2 keep at home? 3 A. No. 4 Q. Let me ask you some questions about -- first 5 let me show you what I've marked as Exhibit 6 23. 7 MR. OHLEMEYER: Counsel, I'm sorry, 8 I only have one copy of that. 9 Q. And let me hand you 24 with it. They kind 10 of go together. 11 MR. OHLEMEYER: I do have a copy of 12 24, you guys. You can have that. 13 Q. Doctor, let me hand you 24. 24 is a medical 14 authorization. You understand what that is: 15 right? 16 A. Yes. 17 Q. You're not free to divulge or disclose 18 medical records on your patients without 19 authorization of the patient. 20 A. Right. 21 Q. And typically in a case like this where 22 there's litigation involved, the lawyers or 23 the administrator of the estate have to sign 24 that and that allows you to produce medical 25 records.</p>	<p style="text-align: right;">Page 391</p> <p>1 Q. That's apparently the note that she wrote. 2 A. "Did not see Mrs. Wiley in our office - only 3 at the hospital. (Therefore, all records 4 would be at Ball Memorial.)" 5 Q. Right. 6 A. Yes. 7 Q. And that's consistent with your 8 understanding of how things worked over here 9 at -- 10 A. Well, the problem is, our chart disappeared. 11 And we kept looking for the chart, we 12 couldn't find it. 13 Q. When did it disappear? 14 A. Sometime around the time of '93, '94. All I 15 know is that we were -- we continued to look 16 for that and we could not find it. 17 Q. Did Sylvia tell Mr. Meredith that the chart 18 had disappeared and you were looking for it 19 and couldn't find it in February of '94? 20 A. I don't know if she did or not. 21 Q. Well, what she wrote to Mr. Meredith there 22 is that -- 23 A. She probably looked for the chart in our 24 files, it was not there. And therefore, she 25 said there was no current file there. So</p>
<p style="text-align: right;">Page 390</p> <p>1 A. Yes. 2 Q. There's a note in the top right-hand corner 3 of that authorization. Will you read that 4 for me? 5 A. Says, "Dr. Turner - I sent copies of these 6 back to Mr. Meredith stating she was not 7 seen in our office. Sylvia." 8 Q. Sylvia is your secretary? 9 A. Well, one of them. 10 Q. Apparently what happened in February of '94, 11 somebody came to your office with an 12 authorization -- 13 A. Uh-huh. 14 Q. -- wanted medical records and a long list of 15 other things, actually, with respect to 16 Mrs. Wiley. 17 A. Yes. 18 Q. And your secretary told them that you didn't 19 see Mrs. Wiley in your office, only at the 20 hospital; therefore, all the records would 21 be at Ball Memorial. 22 A. If that's what she said. All I know is 23 that -- 24 Q. Well, let me hand you 23. 25 A. Okay.</p>	<p style="text-align: right;">Page 392</p> <p>1 she was being truthful that there was no 2 current file and she didn't probably think 3 that we had any file. 4 Q. She didn't tell him that she thought the 5 records were lost? 6 A. She didn't know that, I don't think, at that 7 time. In February of '94 I don't think she 8 knew. 9 Q. Well, in February of '94, all we know is 10 that when somebody came here with an 11 authorization to collect records on a 12 patient that you knew was involved in 13 litigation, your secretary told them we 14 don't have any of those records because she 15 was treated at the hospital, not in our 16 office; right? 17 MR. CROSS: Well, I'll object to 18 this. 19 MR. OHLEMEYER: I'll withdraw the 20 question. I'll move on. 21 Q. The point is, Doctor -- 22 A. Let me tell you the files were not there. 23 Now, we looked, and they were not there. 24 And we felt that they had disappeared. 25 Q. But my question to you, though, is that's</p>

Page 393

1 not what you told Mr. Meredith or your
 2 secretary told Mr. Meredith when he came
 3 with the authorization to look for the
 4 records.
 5 A. Well, since I did not -- I mean, I did not
 6 write this chart, I did not write this note,
 7 Sylvia did.
 8 Q. So she's the one we'd have to ask about
 9 that.
 10 A. Yes.
 11 Q. We might do that.
 12 So where would, for example, Exhibit 3
 13 have been kept in connection with
 14 Mrs. Wiley's records? Would it have been
 15 kept at the hospital? Would it have been
 16 kept at the office?
 17 A. It would have been kept in the chart.
 18 Q. And the chart, presumably, there should have
 19 been a chart in your office.
 20 A. Should have been a chart out there where all
 21 the other charts were.
 22 Q. So that record wouldn't be at Ball Memorial.
 23 A. Exhibit 3?
 24 Q. Yes.
 25 A. No.

Page 394

1 Q. Is it true, Dr. Turner, that you did not see
 2 Mrs. Wiley in your office?
 3 A. That is true.
 4 Q. It's true you only saw her at the hospital?
 5 A. Yes.
 6 Q. Is it true that in patients you don't see --
 7 is it true that in a patient who is not seen
 8 at your office but only seen at the
 9 hospital, all records about that patient
 10 would be at Ball Memorial?
 11 A. We would have gotten copies of her chart --
 12 of her x-rays and most likely they would
 13 have -- that's all we would have gotten is a
 14 copy of the discharge summary that would
 15 have been sent to us, since I dictated it,
 16 and a copy of some of the x-rays.
 17 It depends on who orders the x-rays. I
 18 may not have gotten all the copies. If
 19 Sprunger ordered an x-ray, it may have gone
 20 to his office and not ours. Not everybody
 21 on this list, five people, get copies.
 22 Whoever ordered the x-rays and whose name is
 23 at the top, unless there's a carbon copy to,
 24 those people don't get x-rays. Don't get
 25 copies.

Page 395

1 So I can't tell you how much of that
 2 chart we had and how much -- all I know is
 3 we could not find it. And it disappeared.
 4 Q. Well, but my point is, for all you know, the
 5 only thing Mr. Meredith was told was what's
 6 described here in Exhibit 23. He wasn't
 7 told it was lost or disappeared or you
 8 couldn't find it.
 9 A. All I can tell you is what I know. She
 10 might not have even known, other than
 11 looking, it wasn't there.
 12 Q. Where do you keep your progress notes that
 13 are dictated about the patient post death?
 14 A. Post death.
 15 Q. Do you have a file somewhere that says
 16 "Mildred Wiley progress notes"?
 17 A. It should have been kept in the file.
 18 Q. Do you have that file?
 19 A. You have it. I don't have the original
 20 file. All we have is what we found on
 21 microfilm.
 22 Q. Or what the lawyers sent you.
 23 A. Or what the lawyers sent me, whatever they
 24 got.
 25 Q. Let me hand you what I've marked as Exhibit

Page 396

1 25. This is another one of your dictations
 2 dated May 25, 1993.
 3 A. Yes.
 4 MR. WAGNER: What exhibit number is
 5 that?
 6 MR. OHLEMEYER: This is Exhibit 25,
 7 right.
 8 (Discussion off the record.)
 9 Q. So this was dictated the day after Exhibit,
 10 the first page of Exhibit -- well, the day
 11 after Exhibit 3; right?
 12 A. Yes.
 13 Q. And this describes that discussion you and
 14 Dr. Songer had about the patient's chart:
 15 right?
 16 A. Reviewed the patient's chart, discussed it
 17 at length, yes.
 18 Q. Where did you obtain that chart? Was that
 19 chart here in the office?
 20 A. I don't know where this came from.
 21 Q. No, the chart that you're talking about in
 22 this memorandum, in this progress note --
 23 A. Reviewed the patient's chart.
 24 Q. -- where would you have obtained that chart?
 25 A. Most likely, I would suspect, from the

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 397

1 hospital.

2 Q. And during your discussion, the question

3 arose as to whether or not you were dealing

4 with a breast cancer versus a lung cancer:

5 right?

6 A. Breast cancer versus lung cancer, yes.

7 Q. And Dr. Songer and you both called this

8 Dr. Dana-Farber in Boston?

9 A. I can't remember if I did or not. He may

10 have been the only one that called him. I

11 can't remember. I do not recall calling

12 this gentleman, unless it says so in this,

13 if it says so in this memorandum.

14 Q. Then you talked with Dr. Kocoshis again

15 about the autopsy; right?

16 A. About the slides. Filtration of pancreatic

17 tissue; again the question arises of whether

18 this -- yes.

19 Q. And the question arises because the

20 appearance of infiltrates on pancreatic

21 tissue taken at autopsy is suggestive of a

22 primary pancreatic tumor, isn't it?

23 A. No. It says I discussed the case with

24 Dr. Tom Kocoshis again about the slides;

25 apparently there was some infiltration of

Page 398

1 pancreatic tissue.

2 "Again the question arises of whether

3 it may be pancreatic. However, on gross

4 section and at the autopsy report there was

5 no evidence of ductal obstruction or other

6 primary in the pancreas itself."

7 Q. So one way we could critically analyze your

8 opinion or Dr. Kocoshis' opinion would be to

9 have a pathologist look at those slides to

10 determine whether there was ductal

11 obstruction in the pancreas; right?

12 A. Or other sources of primary cancer of the

13 pancreas, which is what we talked about

14 before.

15 Q. So ductal obstruction in the pancreas would

16 be a sign of or suggestive of --

17 A. I can't tell you that.

18 Q. Dr. Kocoshis apparently told you that,

19 though; right?

20 A. No. On gross, there was no evidence of

21 ductal obstruction or other primary in the

22 pancreas itself.

23 Q. So my question to you, Dr. Turner, what

24 would the significance of evidence of ductal

25 obstruction be?

Page 399

1 A. You would need to talk to Dr. Kocoshis or a

2 pathologist about that.

3 Q. What would the significance of infiltration

4 of the pancreatic tissue be if it was

5 observed on those slides?

6 A. Well, again, a pathologist would be much

7 better to discuss that.

8 Q. So in May of '93, you and Dr. Songer were

9 discussing with a pathologist whether there

10 was pathological evidence to suggest a

11 primary cancer at a site other than the

12 lung.

13 A. You're asking, were we looking at it to see

14 if there was any other source of a primary

15 cancer; is that correct?

16 Q. Yes. That's what's going on here; right?

17 A. Yes, that's what I said, yes.

18 Q. And then you wanted to look back at all her

19 mammograms --

20 A. Yes.

21 Q. -- because there was still some question as

22 to whether or if you were dealing with a

23 primary breast cancer.

24 A. Yes.

25 Q. And then you talk with the lawyers again.

Page 400

1 A. Well, let's see here.

2 Q. Last paragraph.

3 A. About smoking exposure, she apparently had

4 an open door policy to her office, yes.

5 Q. And that is the -- they are the source of

6 that information. Mr. Tom Young, Mr. Riley

7 discussed with you smoking exposure and gave

8 you information, provided to them,

9 supposedly, by Mrs. Wiley's husband about

10 her exposure to smoke.

11 A. Yes.

12 Q. Did you ever make any effort to contact

13 nurses who had been on that ward to help you

14 verify whether or if Mrs. Wiley was exposed

15 to environmental tobacco smoke and determine

16 whether they would be witnesses for this?

17 A. No.

18 Q. Do you know if anyone else has?

19 A. Perhaps the lawyers have. I don't know.

20 MR. OHLEMEYER: Let me mark this

21 next in order.

22 (Deposition Exhibit(s) 27-28 marked for

23 identification.)

24 Q. Doctor, this is a copy of a fax apparently

25 sent to you from the Young Riley & Dudley

Page 401	Page 403
<p>1 law office on 10/21/97; right?</p> <p>2 A.I don't know if I sent it to them or they</p> <p>3 sent it to me.</p> <p>4 Q.See at the top there where it says from?</p> <p>5 A.I guess so.</p> <p>6 Q.They sent it to you; right?</p> <p>7 A.Yes.</p> <p>8 Q.You see --</p> <p>9 A.This was at my request. Okay?</p> <p>10 Q.Do they typically, do you -- in the past</p> <p>11 four years, have you typically requested of</p> <p>12 them and have they typically complied with</p> <p>13 your request about sending stuff to them?</p> <p>14 A.They haven't sent me hardly anything. The</p> <p>15 reason why this was requested was because I</p> <p>16 was at this Indiana State Medical</p> <p>17 Association meeting and I was talking to one</p> <p>18 of the physicians there that's on the</p> <p>19 Tobacco Task Force and he noted that this</p> <p>20 study had just come out that day or he got</p> <p>21 it on the Internet. I requested it from our</p> <p>22 library, our library had not received it</p> <p>23 and, therefore, I wanted to be prepared</p> <p>24 because you had told me I needed to be</p> <p>25 prepared. So I wanted to try to be as</p>	<p>1 Q.Okay. Let me ask you a couple of questions.</p> <p>2 Doctor --</p> <p>3 A.Geez.</p> <p>4 Q.-- about -- it is fair to say that lung</p> <p>5 cancer is not really a single disease but</p> <p>6 it's actually different histological</p> <p>7 diseases and subgroups of diseases. I mean.</p> <p>8 lung cancer isn't really precise, is it?</p> <p>9 A.Lung cancer --</p> <p>10 Q.Let me rephrase the question. I mean is it</p> <p>11 important to determine what type of lung</p> <p>12 cancer you're dealing with in order to</p> <p>13 determine treatment of a patient suspected</p> <p>14 of having lung cancer?</p> <p>15 A.Repeat the question again.</p> <p>16 Q.Let me back up to where I started. Is lung</p> <p>17 cancer a single disease or is it a</p> <p>18 combination of different diseases or disease</p> <p>19 processes?</p> <p>20 A.Lung cancer, well, there's -- there may be</p> <p>21 one or two cell types involved. Most likely</p> <p>22 it's one cell type, but it's hard to say.</p> <p>23 Sometimes there's two or three. So</p> <p>24 diseases, you're talking about --</p> <p>25 Q.Well, let me, I guess what I'm getting at --</p>
Page 402	Page 404
<p>1 prepared as possible and that's why I</p> <p>2 requested this.</p> <p>3 Q.Well, you and I, Dr. Turner, had never</p> <p>4 spoken to each other prior to October 21 of</p> <p>5 1997; right?</p> <p>6 A.If that's the day that we had our first</p> <p>7 deposition, no.</p> <p>8 Q.You see the little scribbles there to the</p> <p>9 right-hand side of the citation bar?</p> <p>10 A.Yes.</p> <p>11 Q.Are those your scribbles or their scribbles?</p> <p>12 A.Those are mine.</p> <p>13 Q.You kind of drew that, it looks like a</p> <p>14 cigarette; right?</p> <p>15 A.Where?</p> <p>16 Q.Like the end of a cigarette?</p> <p>17 A.No.</p> <p>18 Q.See right here?</p> <p>19 A.Those are doodles.</p> <p>20 Q.Okay, that's just a doodle, all right.</p> <p>21 That's my question. Is it a doodle or is it</p> <p>22 a cigarette?</p> <p>23 A.It's a doodle. For Pete's sake.</p> <p>24 Q.Whose underlining is it?</p> <p>25 A.Mine.</p>	<p>1 A.It's a very vague question.</p> <p>2 Q.I know, but that's kind of the point of the</p> <p>3 question. To describe something as a car</p> <p>4 doesn't necessarily tell you whether it's a</p> <p>5 Ford or a Chevy or a BMW.</p> <p>6 To describe something as lung cancer</p> <p>7 doesn't tell you whether it's</p> <p>8 adenocarcinoma, squamous cell carcinoma,</p> <p>9 small cell carcinoma, large cell carcinoma;</p> <p>10 right?</p> <p>11 A.Yes.</p> <p>12 Q.And there are different types of lung</p> <p>13 cancers.</p> <p>14 A.There are different types of lung cancers.</p> <p>15 Q.And that's one of the reasons you send a</p> <p>16 specimen to a pathologist, to help identify</p> <p>17 that cell type for you.</p> <p>18 A.Yes.</p> <p>19 Q.And the risk factors for the development of</p> <p>20 lung cancer can vary among cell types;</p> <p>21 right?</p> <p>22 A.The risk factors may vary among the cell</p> <p>23 types, yes.</p> <p>24 Q.Some cell types are less strongly associated</p> <p>25 with cigarette smoking than others?</p>

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 405

1 A. Yes.
 2 Q. There are some cell types that are thought
 3 not to be associated with cigarette smoking.
 4 A. I can't tell you that for sure.
 5 Q. What about bronchioalveolar carcinoma? It's
 6 really a subtype, I guess, of a cell type?
 7 A. Yes. I can't tell you for sure. My
 8 understanding is that it can occur in
 9 smokers.
 10 Q. Does the cell type give you any indication
 11 about where the cancer began?
 12 A. Does the cell type tell you where it began.
 13 Q. Does it -- well, does it allow you -- does
 14 it give you any information about where the
 15 tumor began?
 16 A. Well, squamous cell is most likely seen in
 17 the airway.
 18 Q. Can I stop you there. That's because it's
 19 thought to arise in the squamous cells in
 20 the airway; right?
 21 A. In the epithelial cells.
 22 Q. In the epithelial cells. And there are
 23 other types of cancer that are thought to
 24 occur in other types of stem cells, that
 25 only occur in certain types of organs in

Page 406

1 certain parts of the body; right?
 2 A. Yes.
 3 Q. So, for example, a small cell carcinoma, the
 4 diagnosis of small cell carcinoma helps you
 5 determine a range of places where that
 6 cancer could have occurred and then the
 7 literature and the epidemiology gives you
 8 some percentages of where it's most likely
 9 to occur.
 10 A. Well, my understanding is small cell
 11 carcinoma is primarily from the lung.
 12 Q. That's -- I don't mean -- but that's kind of
 13 what I'm trying to get at. That's an
 14 example of a diagnosis that helps you
 15 pinpoint a source; right?
 16 A. Yes.
 17 Q. And is it fair to say that as opposed to
 18 small cell or squamous cell carcinoma that
 19 adenocarcinomas can arise in a larger number
 20 of organs in the body?
 21 A. Adenocarcinoma can arise in other areas of
 22 the body, yes.
 23 Q. Is adenocarcinoma the most frequently
 24 occurring tumor in North America?
 25 A. Okay, adenocarcinoma of the other organs --

Page 407

1 Q. Adenocarcinoma in general. Is that the most
 2 frequently occurring --
 3 A. Not being an oncologist or pathologist --
 4 Q. Is it the most frequently occurring lung
 5 tumor in North America?
 6 A. My understanding is adeno has surpassed
 7 squamous cell. But, again, a pathologist or
 8 oncologist would be able to tell you.
 9 Q. Can all lung cancer cell types occur in
 10 nonsmokers?
 11 A. My understanding is, in my references,
 12 squamous and oat cell, I have not seen them
 13 in nonsmokers, but a pathologist or an
 14 oncologist would be able to tell you.
 15 Q. And is it fair to say that, although
 16 sometimes you're limited by what you can do,
 17 that, all things being equal, a diagnosis of
 18 cancer is a pathological diagnosis, you
 19 prefer to have a pathologist help make the
 20 diagnosis?
 21 A. A diagnosis of cancer -- I'm not a
 22 pathologist. You would need -- I'm not
 23 going to diagnose a cancer on you without a
 24 piece of tissue and a pathologist, trained
 25 pathologist looking at that.

Page 408

1 Q. That's my question.
 2 A. You're talking about diagnosis versus
 3 suspicion, too.
 4 Q. Impression versus diagnosis, suspicion
 5 versus diagnosis, I understand that, Doctor.
 6 And I appreciate, one of the challenges you
 7 face as a doctor is sometimes you have to
 8 deal with impressions, not diagnosis, but
 9 that's my question; the diagnosis of cancer
 10 is a pathological diagnosis.
 11 A. A diagnosis, if you put something down as a
 12 diagnosis, you would like that to be
 13 verified by a pathologist with tissue as
 14 best we can.
 15 Q. Yes. Do you understand the word or phrase
 16 "multifactorial" as it relates to lung
 17 cancer?
 18 A. Multifactorial means that cancer may occur
 19 from a number of factors.
 20 Q. And are there a number of factors associated
 21 with the development of lung cancer?
 22 A. Are there a number of factors that are
 23 associated with the development of lung
 24 cancer.
 25 Q. Number of risk factors, I guess I meant.

Page 409

Page 411

1 A. Number of risk factors. There can be.
 2 Q. And one of them is cigarette smoking?
 3 A. One of them is cigarette smoking.
 4 Q. One of them is air pollution. Well, let's
 5 say environmental factors.
 6 A. There may be environmental factors.
 7 Including environmental tobacco smoke.
 8 Q. Air pollution and radon?
 9 A. Radon, air pollution. It depends on the
 10 degree of exposure and where you live.
 11 Q. Occupational factors are associated with an
 12 increased risk of developing lung cancer?
 13 A. Occupational factors, depends on what you're
 14 exposed to.
 15 Q. Asbestos, heavy metals, things like that.
 16 A. Depends what you're exposed to.
 17 Q. Is diet a risk factor for the development of
 18 lung cancer?
 19 A. You're asking diet or pesticides or what?
 20 Q. Well, I mean, is there evidence to suggest
 21 that certain diets make one more or less
 22 likely to develop lung cancer?
 23 A. I can't tell you that. Let me go back to
 24 one of your previous questions and clarify.
 25 You asked the question, and I can't --

Page 410

Page 412

1 THE WITNESS: Can we back up? He
 2 was talking about oat cell and squamous
 3 cell, whether --
 4 Q. I'll ask -- I mean, Doctor, I'll let -- I
 5 mean, I was just trying to use it as an
 6 example. I guess my question was, are
 7 certain -- well, I don't know. You tell me.
 8 What is it you don't understand? I mean,
 9 what did you want me to ask?
 10 A. I want to answer your question.
 11 Q. What question is it?
 12 A. Well, the question arose --
 13 Q. You answer it and then I'll ask it.
 14 A. The question arose is whether oat cell and
 15 squamous cell -- I can't even remember the
 16 question. My answer was I have not seen
 17 them in nonsmokers. But the point is, is
 18 that non-primary smokers, but secondhand
 19 smoke, we have had diagnoses that may -- I
 20 mean, I can't tell you that secondhand smoke
 21 may not have caused some of those cancers.
 22 Q. What you're saying, I think, is this: That
 23 you have observed squamous cell carcinoma or
 24 small cell carcinoma in nonsmokers and you,
 25 at this point, are either suspicious of or

1 can't rule out the possibility that those
 2 tumors were caused in your opinion by
 3 exposure to environmental tobacco smoke.
 4 A. What I'm telling you is that in the ones I
 5 have experienced, the ones I have diagnosed,
 6 helped diagnose, with squamous cell or oat
 7 cell carcinoma, virtually all of those have
 8 been smokers. Primary smokers. How much
 9 secondary smoke increased their risk because
 10 of exposure to secondary smoke, that's what
 11 I'm saying.
 12 Q. Well, what's a bigger risk to health,
 13 Doctor, primary smoking or exposure to
 14 environmental tobacco smoke?
 15 A. It depends on the level of the exposure.
 16 Q. Do you think heavy exposure to environmental
 17 tobacco smoke is more or less a risk to
 18 health than smoking a half a pack of
 19 cigarettes a day?
 20 A. An epidemiologist would be able to tell you
 21 better but it depends on the level of
 22 exposure to that secondhand smoke.
 23 Q. Let's call it a heavy exposure.
 24 A. What's a heavy exposure?
 25 Q. Doctor, my next question is -- well, I don't

1 know, you tell me.
 2 A. You have to ask the question. I want to
 3 answer it truthfully. What's heavy
 4 exposure?
 5 Q. When I use the words "heavy exposure," you
 6 don't know what I mean?
 7 A. It depends on -- heavy exposure, heavy
 8 exposure is exposure to a number of
 9 cigarettes, secondhand smoke cigarettes.
 10 Q. Well, is a heavy exposure to environmental
 11 tobacco smoke more or less of a risk to
 12 health than smoking a half a pack of
 13 cigarettes a day?
 14 A. What do you mean by heavy exposure?
 15 Q. So you need more information than I've given
 16 you to answer the question.
 17 A. I need to know what the exposure is.
 18 Q. All right. Thank you, Doctor.
 19 My next question is, Are you familiar
 20 with medical literature that associates
 21 certain duties with an increased or a
 22 decreased risk for developing lung cancer?
 23 A. I can't tell you whether it's lung cancer or
 24 not. I do think that because of the
 25 pesticides that are in animal fats and

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 413

1 pesticides on vegetables that I'm not sure
2 that they increase your risk of lung cancer
3 but they may increase your risk of other
4 cancers.
5 Q. Are you familiar with any studies of
6 nonsmoking women to determine whether their
7 diet increased or decreased their likelihood
8 of developing lung cancer?
9 A. No. I may have read literature but it's
10 been a long time ago and I don't want to
11 misquote it.
12 Q. Do you know if family medical history is
13 associated with increased risk of developing
14 lung cancer?
15 A. Family history.
16 Q. Family medical history.
17 A. I can't -- a geneticist may be able to be
18 helpful to you. There are certain cancers
19 that can increase, whether it's lung cancer
20 or not is not clear. I mean, I can't tell
21 you.
22 Q. So you don't know whether there's an
23 increased familial risk for lung cancer in
24 individuals who are nonsmokers who have
25 relatives with lung cancer?

Page 414

1 A. No, I do not.
2 Q. Do you think viruses can cause lung cancer?
3 A. I'm not a research person. I mean, what
4 kind of viruses are you talking about?
5 Q. Well, there's been some talk about a virus
6 found in polio vaccines and its relationship
7 to certain types of cancer.
8 A. What's the incidence?
9 Q. Well, that's my question.
10 A. I have not read that literature.
11 Q. Okay. But as a theoretical medical person,
12 do you believe there is a case to be made,
13 an argument to be made for a viral etiology
14 for cancer?
15 A. I'm not a research scientist in that area.
16 I have not read that specific --
17 Q. Do you think that every cancer is caused by
18 something external to the body or do you
19 think there are cancers that occur as a
20 result of, you know --
21 MR. FURR: Metabolism.
22 Q. -- endogenous events?
23 A. Endogenous events, such as --
24 Q. Genetic defect, metabolism?
25 A. Metabolism to what effect?

Page 415

1 Q. That's my question, Doctor. Does every
2 cancer have to have an external cause?
3 A. Metabolism is a broad area.
4 Q. It's a broad question. Do you think all
5 cancers require an external event?
6 A. I mean, a research scientist in this area,
7 an oncologist would be much more likely to
8 answer that question for you.
9 Q. Do you think -- you are familiar with
10 literature that suggests stress is related
11 to an increased risk of developing lung
12 cancer.
13 A. A stress could be -- well, if -- if it -- I
14 can't answer that question.
15 Q. Do you think there are some cancers,
16 including lung cancers, that just occur
17 without any apparent cause? An idiopathic.
18 A. Certain lung cancers can occur -- I can't
19 answer that question, either.
20 Q. And I appreciate what you're telling me.
21 You're telling me that you're not saying
22 that that's wrong, or I'm incorrect, you're
23 just saying you don't have background,
24 education, familiarity to --
25 A. I think you need to talk to an oncologist

Page 416

1 that has researched in that area or that
2 would be familiar with that literature. I
3 have not reviewed that literature. I don't
4 want to misspeak.
5 Q. How well understood are the biological
6 mechanisms by which cells in the lung become
7 cancerous?
8 A. I believe there are mutations that can
9 occur.
10 Q. Do scientists understand how they occur in
11 such a way they can prevent them from
12 happening?
13 A. Well, again, a biochemist would be helpful
14 in that situation. I'm sure he would be
15 much more enlightened than I would be.
16 Q. What's the survival rate for lung cancer
17 patients today as compared to what it was
18 say 10 or 15 or 20 years ago?
19 A. I believe -- I have it here. It's -- I've
20 looked this up. I believe it's about 14
21 percent. That used to be about 9 percent at
22 nine years. Now it's about 14 percent.
23 Q. Would you characterize that as a big
24 improvement, small improvement, or moderate
25 improvement?

Page 417

Page 419

1 A.Dismal.
 2 Q.I mean, here's kind of a theoretical
 3 question for you. You know, in light of all
 4 the technological advances and therapeutic
 5 modalities and equipment and brains being
 6 put to this, why do you think the survival
 7 rate's improved so little over the years?
 8 A.Because patients are still poisoning
 9 themselves with carcinogenic agents and
 10 unless we can ask -- get them to quit
 11 poisoning themselves, our hands are tied.
 12 Q.By "poison" I take it you would include
 13 cigarette smoking and environmental tobacco
 14 smoke.
 15 A.Yes.
 16 Q.But not limit your definition of poisons to
 17 that, right?
 18 A.The majority -- I mean the majority of
 19 patients that I see with lung cancer are
 20 related to those, primarily from primary
 21 tobacco smoke.
 22 Q.Do you think if there was no cigarette
 23 smoking there would be no lung cancer?
 24 A.I think our percentages would drop
 25 precipitously.

Page 418

Page 420

1 Q.How do you know whether or if there are
 2 other things in the environment that might
 3 cause lung cancer at a similar rate?
 4 A.Because we've not proven that that has
 5 happened. I mean, there is no other
 6 environmental toxin that people put in their
 7 body that we are aware of that causes such
 8 an incredible -- incredible number of
 9 illnesses.
 10 Q.I take it you would agree with me, Doctor,
 11 that if there were no cigarette smoking
 12 there would probably still be lung cancer,
 13 although, as you've suggested, at a lower
 14 rate in this country.
 15 A.90 percent of lung cancers are related to
 16 tobacco abuse. So if you drop out tobacco,
 17 and secondhand smoke, we would not have as
 18 many lung cancers, and really illnesses,
 19 heart disease, the different types of
 20 cancers that, you know, are correlated with
 21 tobacco smoke.
 22 MR. OHLEMEYER: Take a short break.
 23 is that okay, five minutes?
 24 For the record, we ought to reflect
 25 that we've marked the Notice of Continued

1 Deposition of Dr. Turner as Exhibit 26.
 2 (A recess was taken.)
 3 Q.Doctor, if you don't understand a question,
 4 will you let me know?
 5 A.Yes.
 6 Q.We've marked as Exhibit 22 the notes that
 7 you produced today.
 8 A.Yes.
 9 Q.Can you tell me when and how you prepared
 10 these notes?
 11 A.I prepared them over the last probably week.
 12 Q.And how did you go about doing it?
 13 A.I reviewed literature from a number of
 14 sources.
 15 Q.Can you tell me, you don't cite --
 16 A.I can get the sources if you want. Want me
 17 to go get them?
 18 Q.At some point I want a list.
 19 A.Primarily I wanted good review articles,
 20 several good reviews, but Richard Bone, he
 21 just died of renal cell, he was the editor,
 22 and I did an updated text and this is where
 23 those are from.
 24 Q.It's a textbook, Bone, B-O-N-E?
 25 A.No, it's a series of updated literature on

1 critical care.
 2 Q.Did all of the information on these notes
 3 come from that source?
 4 A.Except back in 1992, EPA, and those came
 5 from tobacco papers by Glantz, Stan Glantz.
 6 Q.Got you. And this is -- tell me why you put
 7 this together. This reference together.
 8 A.I was trying to kind of summarize things in
 9 my own mind.
 10 Q.Are these things that you had researched
 11 prior to undertaking this exercise?
 12 A.Researched.
 13 Q.I mean, had you done this kind of research
 14 before and just not written it down or --
 15 A.I have given a number of lectures on tobacco
 16 and I have written this down on a number of
 17 occasions. But these, this collection of
 18 notes are for this occasion.
 19 Q."This occasion" being the deposition?
 20 A.Yes.
 21 Q.Doctor, am I correct that in your July 20,
 22 1993 letter that we've marked as Exhibit --
 23 help me out. What's the exhibit number?
 24 A.I don't know, it's not on here. Wait a
 25 minute. July -- 21.

Page 417 - Page 420

 STEWART-RICHARDSON & ASSOCIATES
 COURT REPORTERS (317) 237-3773

Page 421	Page 423
<p>1 Q.Exhibit 21?</p> <p>2 A. Yes.</p> <p>3 Q. You cite a reference to Blot and Fraumeni,</p> <p>4 F-R-A-U-M-E-N-I. I think it's on the fourth</p> <p>5 page. Fourth page?</p> <p>6 A. Yes.</p> <p>7 Q. That was an article that you obviously had</p> <p>8 reviewed in advance of preparing your July</p> <p>9 20, 1993 letter.</p> <p>10 A. I guess, yes.</p> <p>11 Q. You wouldn't have -- you couldn't have cited</p> <p>12 it if you weren't aware of it prior to the</p> <p>13 time you prepared the letter; right?</p> <p>14 A. Right. Yes.</p> <p>15 Q. Now, am I correct, Doctor, that you cite it</p> <p>16 for the proposition and support for the</p> <p>17 proposition that involuntary smoking can</p> <p>18 cause cancer in nonsmokers?</p> <p>19 A. Do you have the article there?</p> <p>20 Q. Well, look at -- here's what I'm saying.</p> <p>21 You see on page 3 of your July 20th</p> <p>22 report --</p> <p>23 A. Yes.</p> <p>24 Q. -- says at the bottom, "In summary then, in</p> <p>25 this report, by the Surgeon General of the</p>	<p>1 right?</p> <p>2 A. Yes.</p> <p>3 Q. They weren't studies of women being exposed</p> <p>4 to --</p> <p>5 A. I don't know about all the studies. The</p> <p>6 studies that were cited in 19-, I believe</p> <p>7 1981, published in 1981, there were two</p> <p>8 studies published, and I don't have those in</p> <p>9 front of me, that had to do -- and I'm not</p> <p>10 sure both of them had to do with spousal</p> <p>11 exposure, but they were studies I believe</p> <p>12 for lung cancer in nonsmoking women.</p> <p>13 Q. But even up to the point where the EPA</p> <p>14 looked at this question in their risk</p> <p>15 assessment, the vast majority of studies</p> <p>16 that they relied upon were studies of</p> <p>17 spousal exposure.</p> <p>18 A. I can't tell you spousal.</p> <p>19 Q. All we have to do is go back and look at the</p> <p>20 studies.</p> <p>21 A. You need to look at the studies.</p> <p>22 Q. All right. The two studies you talked about</p> <p>23 in 1981, I think we referred previously to</p> <p>24 as Hirayama and Trichopoulos --</p> <p>25 A. Yes.</p>
Page 422	Page 424
<p>1 United States, it did state that involuntary</p> <p>2 smoking can cause lung cancer in</p> <p>3 nonsmokers"?</p> <p>4 A. Yes.</p> <p>5 Q. Then you go on to cite a report by Kuller:</p> <p>6 right?</p> <p>7 A. "Strong suspicion, even in 1986, that</p> <p>8 environmental tobacco smoke was related to</p> <p>9 lung cancer."</p> <p>10 Q. Then you go on to cite the OSHA Bulletin 54.</p> <p>11 A. Yes.</p> <p>12 Q. Then you go on to cite the study, you cite</p> <p>13 Wald, Blot, and -- you cite Wald, et al.,</p> <p>14 and Blot and Fraumeni for the proposition</p> <p>15 that studies have been done that support the</p> <p>16 proposition that involuntary smoking can</p> <p>17 cause cancer in nonsmokers; right?</p> <p>18 A. If that's what I stated.</p> <p>19 Q. That's what it says there, isn't it?</p> <p>20 A. Yes.</p> <p>21 Q. Now, the studies at that time, in 1993, the</p> <p>22 studies that associated an increase in risk</p> <p>23 of lung cancer among nonsmoking women</p> <p>24 involved women who were exposed to cigarette</p> <p>25 smoke primarily through spousal exposures;</p>	<p>1 Q. -- were criticized at the time they were</p> <p>2 published because they had not evaluated</p> <p>3 exposure to environmental tobacco smoke</p> <p>4 outside the home; right?</p> <p>5 A. I can't tell you that. That they were</p> <p>6 criticized. Who criticized them?</p> <p>7 Q. Well, are you aware of any criticism in the</p> <p>8 literature of those studies at the time they</p> <p>9 were published for any reason?</p> <p>10 A. I'm not aware of any.</p> <p>11 Q. Wouldn't surprise you if there was some</p> <p>12 criticism of a study like that. I mean, is</p> <p>13 criticism something that --</p> <p>14 A. Why would they be criticizing? I don't</p> <p>15 quite understand.</p> <p>16 Q. Well, when people study things and publish</p> <p>17 the results of their studies --</p> <p>18 A. Yes.</p> <p>19 Q. -- isn't there some sort of critical</p> <p>20 discourse that usually ensues?</p> <p>21 A. There can be.</p> <p>22 Q. Especially if it's something that is new or</p> <p>23 previously unreported?</p> <p>24 A. It can be.</p> <p>25 Q. And one of the things people can criticize</p>

Page 425	Page 427
<p>1 are the conclusions researchers have drawn</p> <p>2 from their data.</p> <p>3 A. There can be critical assessment.</p> <p>4 Q. They can criticize the materials and methods</p> <p>5 they've used to reach their conclusions?</p> <p>6 A. Yes.</p> <p>7 Q. In fact, those are all the kinds of things</p> <p>8 that you should look at critically in</p> <p>9 evaluating the reliability of research.</p> <p>10 aren't they?</p> <p>11 A. Yes, you have to look at the whole body of</p> <p>12 research, articles. And whether other</p> <p>13 individuals have come out with similar</p> <p>14 results.</p> <p>15 Q. Is it fair to say that the Hirayama and</p> <p>16 Trichopoulos findings were greeted with some</p> <p>17 skepticism in part about some questions that</p> <p>18 were raised about the methods that were used</p> <p>19 and the sufficiency of the exposure to</p> <p>20 environmental tobacco smoke that nonsmokers</p> <p>21 might have experienced?</p> <p>22 A. It looks like you're looking at an article.</p> <p>23 Can I read that?</p> <p>24 Q. I'm just asking, Doctor, whether you agree</p> <p>25 with me or not that the Trichopoulos and</p>	<p>1 A. And I believe the problem is, is that had to</p> <p>2 do with the fact that individuals would not</p> <p>3 admit to the level of smoking exposure.</p> <p>4 Q. Let's back up for a minute, Doctor. Am I</p> <p>5 correct that, as of July of 1993, there had</p> <p>6 been studies published involving nonsmokers</p> <p>7 living with smokers in which an increased</p> <p>8 risk for the development of lung cancer was</p> <p>9 not found or demonstrated?</p> <p>10 A. I cannot tell you which study they were. I</p> <p>11 cannot tell you how many studies there were,</p> <p>12 and whether these are adequate studies.</p> <p>13 Q. What criteria do you determine whether a</p> <p>14 study is adequate or not?</p> <p>15 A. If a study is adequate, it appears to me</p> <p>16 that it has other individuals that are doing</p> <p>17 the same research, other individuals are</p> <p>18 coming to the same conclusions in the</p> <p>19 medical literature. And epidemiologic</p> <p>20 literature.</p> <p>21 Q. Do you know a researcher by the name of</p> <p>22 Ernest Winger? Are you familiar with</p> <p>23 Dr. Winger's work?</p> <p>24 A. I may have read some of his articles. It's</p> <p>25 difficult to tell you that.</p>
Page 426	Page 428
<p>1 Hirayama findings were greeted with some</p> <p>2 skepticism when they were published in part</p> <p>3 because of the questions raised with regards</p> <p>4 to the methods they used.</p> <p>5 A. I can't tell you that.</p> <p>6 Q. Would it surprise you?</p> <p>7 A. Would it surprise me if they were greeted</p> <p>8 with some skepticism?</p> <p>9 Q. Yes.</p> <p>10 A. Would it surprise me if they were greeted</p> <p>11 with some skepticism. I mean, if things did</p> <p>12 not make sense, if things were not done</p> <p>13 correctly, then possibly there was some</p> <p>14 skepticism.</p> <p>15 Q. Now, as of 1993, as of July 1993, there had</p> <p>16 been studies conducted of groups of</p> <p>17 nonsmokers who were exposed to cigarette</p> <p>18 smoke as a result of living with a smoker</p> <p>19 that did not demonstrate an increased risk</p> <p>20 for the development of lung cancer; isn't</p> <p>21 that right?</p> <p>22 A. I believe that there was some studies out</p> <p>23 there. But again, it had to do with their</p> <p>24 methods.</p> <p>25 Q. What do you mean?</p>	<p>1 Q. Do you know what relationship Dr. Winger has</p> <p>2 to the study of smoking and health?</p> <p>3 A. No.</p> <p>4 Q. Have you ever heard of Dr. Winger in</p> <p>5 connection with the relationship between</p> <p>6 smoking and health?</p> <p>7 A. Again, I may have read some of his</p> <p>8 literature but I do not recall his -- that</p> <p>9 he was the author of any of that. There may</p> <p>10 have or may have not. Unless you put the</p> <p>11 article in front of me I can't tell.</p> <p>12 Q. Let me use an example for you. When people</p> <p>13 talk about the polio vaccine, they think of</p> <p>14 Jonas Salk; right?</p> <p>15 A. Right.</p> <p>16 Q. When you think of research associating</p> <p>17 smoking and risk to health, who do you think</p> <p>18 of?</p> <p>19 A. Probably Stan Glantz. As well as some</p> <p>20 others.</p> <p>21 Q. And who else?</p> <p>22 A. Wilbur Pace. There was a number of</p> <p>23 articles. I mean, I don't -- you have the</p> <p>24 stuff in front of you. It's kind of like I</p> <p>25 can go back and get the articles and look at</p>

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 429	Page 431
<p>1 the authors if you like.</p> <p>2 Q.Can you give me some idea of who the major</p> <p>3 researchers were in the 1950s who associated</p> <p>4 cigarette smoking with risk to health?</p> <p>5 A.I do not have that information.</p> <p>6 Q.Can you tell me who the major researchers</p> <p>7 were who published studies relating smoking</p> <p>8 to risk to health prior to the time of the</p> <p>9 1964 Surgeon General's Report?</p> <p>10 A.I do not have that in front of me.</p> <p>11 Q.If you wanted to find that information,</p> <p>12 where would you look for it?</p> <p>13 A.Probably look at the U.S. Surgeon General's</p> <p>14 Report and look at the bibliography and go</p> <p>15 back and do a review of the literature from</p> <p>16 perhaps 1950 on.</p> <p>17 Q.Have you done that?</p> <p>18 A.Have I done that? I may have done that at</p> <p>19 one time but I don't have it in front of me.</p> <p>20 Q.Have you done it in connection with forming</p> <p>21 any of the opinions you've reached in this</p> <p>22 case?</p> <p>23 A.Yes.</p> <p>24 Q.What have you done?</p> <p>25 A.Well, I've went through, again, the U.S.</p>	<p>1 risk of lung cancer?</p> <p>2 A.My understanding, from looking at some of</p> <p>3 the literature that I reviewed, it was</p> <p>4 approximately 30 percent higher risk. Now,</p> <p>5 depends on what you mean by small to</p> <p>6 moderate.</p> <p>7 Q.Well, tell me what you mean. Do you think a</p> <p>8 30 percent increase is a small to moderate</p> <p>9 increased risk to developing lung cancer?</p> <p>10 A.If I had one chance of carrying on an</p> <p>11 activity and I had a 30 percent chance of</p> <p>12 getting a lethal disease from carrying on</p> <p>13 that activity, I would not do it. I think</p> <p>14 that is a significant risk.</p> <p>15 Q.Are there other things --</p> <p>16 A.Like putting a bullet into a three-chamber</p> <p>17 gun and spin the chamber and see if it hits</p> <p>18 you.</p> <p>19 Q.Well, Doctor, I can appreciate that's your</p> <p>20 assessment of it. But let me ask you this:</p> <p>21 What else do you do in your life that</p> <p>22 exposes you to a risk of developing cancer</p> <p>23 greater than 1.3?</p> <p>24 A.I can't think of anything either. Nothing.</p> <p>25 Q.Do you think that exposure to</p>
Page 430	Page 432
<p>1 Surgeon General's Report. I've went through</p> <p>2 all the literature that I could find that</p> <p>3 appeared to be current, read that. Looked</p> <p>4 at some of the bibliographies from that</p> <p>5 literature and side references. I've</p> <p>6 done -- I mean, I've tried to do as</p> <p>7 extensive research as possible, looking at</p> <p>8 the literature.</p> <p>9 Q.Tell me, Doctor, whether you agree or</p> <p>10 disagree with this statement: As of July</p> <p>11 1993, the cumulative epidemiologic evidence</p> <p>12 suggests that smokers married to smokers --</p> <p>13 nonsmokers married to smokers -- suggest</p> <p>14 that nonsmokers married to smokers</p> <p>15 experienced a small to moderate increased</p> <p>16 risk of lung cancer?</p> <p>17 A.Small to moderate risk.</p> <p>18 Q.Increased risk of lung cancer.</p> <p>19 A.My understanding, it's higher. What do you</p> <p>20 consider small to moderate percentages?</p> <p>21 Q.Well, my question to you, Doctor, as of July</p> <p>22 of 1993, would you agree that the</p> <p>23 epidemiologic evidence developed to date</p> <p>24 suggests that nonsmokers married to smokers</p> <p>25 experienced a small to moderate increased</p>	<p>1 electromagnetic fields increases your risk</p> <p>2 of developing lung cancer by more or less</p> <p>3 than 30 percent?</p> <p>4 A.I would suspect it would be less.</p> <p>5 Q.But you don't know?</p> <p>6 A.I'm not -- I'm not aware that I've been</p> <p>7 exposed extensively to electromagnetic</p> <p>8 fields, unless I don't know about things,</p> <p>9 about where I'm being exposed to at.</p> <p>10 Q.Do you know whether being exposed to radon</p> <p>11 in your home increases your risk of</p> <p>12 developing lung cancer more or less than 30</p> <p>13 percent?</p> <p>14 A.Well, I don't live in a home. I live in an</p> <p>15 apartment. Do I know that -- what's your</p> <p>16 question?</p> <p>17 Q.Well, my question to you, Doctor, is: Do</p> <p>18 you believe that you encounter any risk to</p> <p>19 your health in your day-to-day routine that</p> <p>20 increases your risk of developing lung</p> <p>21 cancer by a factor of 1.3 or more?</p> <p>22 A.Not that I'm aware of.</p> <p>23 Q.So is it your testimony that a 30 percent</p> <p>24 increase in risk, a relative risk of 1.3, is</p> <p>25 or is not a small to moderate increased risk</p>

Page 433	Page 435
<p>1 of lung cancer?</p> <p>2 A.I think it's a significant risk.</p> <p>3 Q.Do you think it's -- could you characterize</p> <p>4 it -- would you characterize it as a small</p> <p>5 to moderate increased risk of lung cancer?</p> <p>6 A.Well, to me, significant is higher than</p> <p>7 moderate.</p> <p>8 Q.Well, do you know how epidemiologists use</p> <p>9 the phrase?</p> <p>10 A.I'm not an epidemiologist.</p> <p>11 Q.Do you know whether an epidemiologist would</p> <p>12 consider a relative risk of 1.3 to be a</p> <p>13 small, moderate, or significant risk?</p> <p>14 A.You would have to ask an epidemiologist.</p> <p>15 Q.My question to you is, is do you agree or</p> <p>16 disagree, that as of July 1993, the</p> <p>17 cumulative epidemiological evidence</p> <p>18 suggested that nonsmokers married to smokers</p> <p>19 experienced a small to moderate increased</p> <p>20 risk to --</p> <p>21 (Brief interruption.)</p> <p>22 Q.Doctor, do you agree or disagree with me</p> <p>23 that as of July 1993 the epidemiologists who</p> <p>24 had studied the relationship between --</p> <p>25 A.If that epidemiologist stated that, that's</p>	<p>1 Q.Well, my question to you, Doctor, is.</p> <p>2 explain to me what you think a 30 percent</p> <p>3 risk to your health means. Does it make it</p> <p>4 twice as likely or a third as likely that</p> <p>5 something is going to happen to you?</p> <p>6 A.I would say that it's probably a 30 percent</p> <p>7 risk higher than normal that I would die of</p> <p>8 that activity.</p> <p>9 Q.And so that makes it less than twice as</p> <p>10 likely that that would happen.</p> <p>11 A.Yes.</p> <p>12 Q.It makes it less than half as likely that it</p> <p>13 would happen.</p> <p>14 A.30 percent higher risk of dying from that</p> <p>15 whatever, getting that disease process.</p> <p>16 Q.And whether that increase in risk is small,</p> <p>17 moderate, significant is something, from an</p> <p>18 epidemiological perspective, you would let</p> <p>19 the epidemiologist answer.</p> <p>20 A.Yes.</p> <p>21 Q.And that's what they do for a living, isn't</p> <p>22 it?</p> <p>23 A.Yes.</p> <p>24 Q.And that's --</p> <p>25 A.Unless it happens to be having -- I mean, if</p>
Page 434	Page 436
<p>1 his opinion.</p> <p>2 Q.Well, my question to you, Doctor --</p> <p>3 A.I don't know what you --</p> <p>4 Q.-- do you agree or disagree with it?</p> <p>5 MR. CROSS: Asked and answered at</p> <p>6 least ten times. Objection.</p> <p>7 A.I would say if I had a risk of 1.3 and I</p> <p>8 knew that there was a 30 percent higher risk</p> <p>9 of developing a terminal disease. I would</p> <p>10 not take that risk. To me that's a</p> <p>11 significant risk. I'm telling you from my</p> <p>12 point of view and from my opinion.</p> <p>13 Would you like to have a 30 percent</p> <p>14 risk of -- if you knew that you were going</p> <p>15 to do an activity and you have a 30 percent</p> <p>16 risk of dying, would you do that activity?</p> <p>17 Q.Doctor, would a 30 percent risk of dying</p> <p>18 double the chances that you were going to</p> <p>19 die as a result of that activity?</p> <p>20 A.30 percent risk of dying double the chance</p> <p>21 that I would die.</p> <p>22 Q.Would a 30 percent risk double your chances</p> <p>23 of dying as a result of that activity?</p> <p>24 A.I think you're mixing words. I don't</p> <p>25 understand your question.</p>	<p>1 your family -- if your child had a 30</p> <p>2 percent risk of developing some type of</p> <p>3 tumor or cancer that may be lethal, that</p> <p>4 will be lethal, would you want them to be</p> <p>5 exposed to that?</p> <p>6 Q.Doctor, let's put it this way: You can't</p> <p>7 use that epidemiology to determine what</p> <p>8 caused a disease in any particular person,</p> <p>9 can you?</p> <p>10 A.They said that there was a 30 percent risk</p> <p>11 of developing lung cancer or some type of</p> <p>12 disease from environmental tobacco smoke.</p> <p>13 Isn't that what that said?</p> <p>14 Q.Doctor, did you understand the question I</p> <p>15 asked you?</p> <p>16 A.Go ahead.</p> <p>17 Q.Can you use epidemiology, can you use an</p> <p>18 epidemiologically-derived estimate of</p> <p>19 relative risk to determine what caused</p> <p>20 cancer in a specific individual?</p> <p>21 A.It may help you decide what the chances are</p> <p>22 that that, the etiology that you've</p> <p>23 selected, occurred.</p> <p>24 Q.And in a nonsmoking woman who has</p> <p>25 adenocarcinoma of the lung --</p>

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 437

1 A. Yes.
 2 Q.-- who claims to have been exposed to
 3 environmental tobacco smoke --
 4 A. Yes.
 5 Q.-- the chances are more likely than not,
 6 based on the epidemiology, that something
 7 other than environmental tobacco smoke
 8 caused her disease.
 9 A.No, I do not believe that you can say that.
 10 From my point of view, from a clinical
 11 perspective, if I'm taking a history, I
 12 would not say that. No.
 13 Q.From an epidemiological perspective, Doctor.
 14 A.You'll have to talk to an epidemiologist.
 15 Q.So you can't tell me whether the
 16 epidemiology suggests that it is more likely
 17 than not -- well, strike that.
 18 You can't tell me whether the
 19 epidemiology indicates that a woman like
 20 Mrs. Wiley is twice as likely to have
 21 developed lung cancer.
 22 A.From my understanding, the studies that I
 23 have read, and the studies I can recall
 24 right now, her chance is 30 percent or more.
 25 Q. Which is less than twice as likely.

Page 438

1 A.It's not two. It's less than twice as
 2 likely.
 3 Q. So a relative risk of 1.3 --
 4 A. 30 percent.
 5 Q. A risk of 30 percent increase in risk does
 6 not tell you, based on the epidemiology,
 7 that a disease in a specific individual was
 8 more likely than not caused by exposure to
 9 that risk factor.
 10 A. You're asking if that 30 percent risk, that
 11 there's a 30 percent chance, is that what
 12 you're asking?
 13 Q. Here's what I'm asking you, Doctor. Listen
 14 real carefully.
 15 A. I'm trying. Really, I am. But you keep
 16 re- --
 17 Q. Let's take it a step at a time. You have a
 18 patient who's a nonsmoker --
 19 A. Yes.
 20 Q.-- who claims to have been exposed to
 21 environmental tobacco smoke; right?
 22 A. Not claims. She was.
 23 Q. Doctor, I'm not talking about Mrs. Wiley,
 24 okay?
 25 A. Okay, that's fine.

Page 439

1 Q. Can you help me for a minute? Divorce
 2 yourself from the facts of the case. Let's
 3 talk about general principles, okay?
 4 A. Okay.
 5 Q. And you smile because I take it it's
 6 difficult for you to do that, isn't it?
 7 A. No. I'm smiling because I'm trying very
 8 hard to answer your question.
 9 Q. Let's talk about data, let's talk about
 10 things that you can teach a class, things
 11 that you can prove, things that you can say
 12 for certain --
 13 A. Yes.
 14 Q.-- without judgment, without opinion.
 15 If we have an individual who didn't
 16 smoke, who has lung cancer, who claims to
 17 have been exposed to environmental tobacco
 18 smoke, isn't it correct that the
 19 epidemiology suggests that it is more likely
 20 than not something other than environmental
 21 tobacco smoke that caused that individual's
 22 cancer?
 23 MR. CROSS: Objection, asked and
 24 answered.
 25 A. What else would there be?

Page 440

1 Q. Doctor, we don't -- that's the point. If
 2 you don't know what else there would be, the
 3 epidemiology suggests to you, doesn't it,
 4 that it is more likely than not something
 5 other than environmental tobacco smoke
 6 caused that person's cancer?
 7 A. I don't think you can say that. The numbers
 8 say that exposure to environmental tobacco
 9 smoke -- if I was exposed to environmental
 10 tobacco smoke and I came down with a lung
 11 cancer and I had -- and I had exposure, my
 12 risk of that being the cause of my lung
 13 cancer is about 30 percent.
 14 Q. So the chances that that exposure caused
 15 your lung cancer are about 30 percent.
 16 Right?
 17 A. Yes, one in three, yes.
 18 Q. So the chances are that that exposure didn't
 19 cause your lung cancer is 70 percent.
 20 Right?
 21 A. You'd have to ask an epidemiologist.
 22 Q. All right. Now, Doctor --
 23 A. I don't want to -- I don't want to misspeak.
 24 I mean, an epidemiologist, they have the
 25 ability to look at numbers and...

Page 441

1 Q. As of July 1993, was there any uncertainty
2 about the causal nature of the relationship
3 between environmental tobacco smoke and lung
4 cancer in light of the limitations that are
5 involved in assessing exposure to
6 environmental tobacco smoke?

7 MR. CROSS: Would you read that
8 question back.

9 MR. OHLEMEYER: Let me rephrase it.

10 MR. CROSS: Just read that one back
11 first.

12 MR. OHLEMEYER: Well, have it your
13 way, but I'm not sure there's --

14 (The requested material was read back
15 by the reporter.)

16 A. The literature that was out there by July of
17 '93 stated that individuals were developing
18 lung cancer on the basis of environmental
19 tobacco smoke.

20 Q. And did the literature that was out there,
21 Doctor, in July of 1993 indicate that there
22 was some uncertainty about whether that
23 relationship, the fact that nonsmokers were
24 developing lung cancer, was a causal one
25 because of the limitations that are inherent

Page 442

1 in determining how much or whether people
2 had been exposed to environmental tobacco
3 smoke?

4 A. In some of the literature that was reviewed,
5 including the first two authors that you
6 talked about in 1991 -- 1981, their
7 literature I believe, and some of the review
8 articles that I looked at, what they looked
9 at is the probabilities, and the fact that
10 we knew that primary tobacco smoke caused
11 lung cancer. Okay?

12 I mean, I can't divorce -- I mean, you
13 can't divorce the fact -- this is what they
14 wrote in some of their articles. You can't
15 divorce the fact, you can't take
16 environmental tobacco smoke and say, well,
17 this is a new type of being, it has nothing
18 to do with primary smoke.

19 Q. Can I stop you right there?

20 A. Yes.

21 Q. But it is, in fact, a different chemical
22 substance from primary smoke.

23 A. No, it isn't.

24 Q. That's your opinion?

25 A. No.

Page 443

1 Q. Is it your opinion that environmental
2 tobacco smoke is or is not a distinct
3 chemical substance from primary cigarette
4 smoke?

5 A. The same chemicals that are in primary
6 smoke, many of the same chemicals that are
7 in primary smoke are in environmental
8 tobacco smoke, or where else would it come
9 from?

10 Q. Do you know what happens to the chemistry of
11 tobacco smoke when it leaves the end of a
12 burning cigarette?

13 A. Precipitates into the air. I mean, it's
14 into the air.

15 Q. Do you know anything else about what happens
16 to it?

17 A. Well, I do know that some of the
18 literature -- and you've got the notes
19 there -- that when a -- when the chemicals
20 are inhaled by a primary smoker, the
21 temperature of that cigarette is about 900
22 degrees. At the end of a smoldering
23 cigarette, it's about 400 degrees. I do
24 know that environmental tobacco smoke is --
25 can be more toxic than primary smoke because

Page 444

1 the chemicals that are not incinerated, some
2 of the chemicals that a primary smoker
3 inhales are incinerated and some of the ones
4 that are coming out of the end of a
5 cigarette are not and, therefore, are more
6 toxic.

7 Q. Do you know -- well, you know that because
8 you've read it and you believe it.

9 A. Yes.

10 Q. But, Doctor, my question to you is, do you
11 know what happens to the chemistry of that
12 smoke? Do you know if those substances
13 change chemical nature, change shape, get
14 diluted?

15 A. I think you need to -- I mean, I could tell
16 you what I read, I could surmise, but I'm
17 not a scientist in that area.

18 Q. So you don't have any background, education,
19 or expertise in the chemistry of
20 environmental tobacco smoke as it relates to
21 mainstream smoke.

22 A. I have no background -- what did you say?

23 Q. Education or expertise.

24 A. Well, I have read a number of articles.

25 Q. But it's not an area in which you believe

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 445	Page 447
<p>1 yourself to be qualified by reason of</p> <p>2 background, education, or experience to</p> <p>3 explain it to us.</p> <p>4 A. Well, compared to --</p> <p>5 Q. Is that right?</p> <p>6 A. -- to the individuals, other physicians -- I</p> <p>7 probably know more about environmental</p> <p>8 tobacco smoke than other individuals.</p> <p>9 Q. But my question to you is, Doctor, do you</p> <p>10 feel qualified by reason of your background,</p> <p>11 education, or experience to state with</p> <p>12 reasonable certainty what happens to the</p> <p>13 chemicals in tobacco smoke when they are</p> <p>14 either emitted from the side of the end of a</p> <p>15 burning cigarette or come out the proximal</p> <p>16 end of a cigarette when it's smoked?</p> <p>17 A. I can tell you that there is partial</p> <p>18 degradation, there may not be -- I can tell</p> <p>19 you that those are inhaled by people that</p> <p>20 are standing there inhaling them. I can</p> <p>21 tell you that your risk of cancer, if you</p> <p>22 inhale those particles and those cancer --</p> <p>23 those chemicals is increased. I can tell</p> <p>24 you that.</p> <p>25 Q. Can you tell me how many of those chemicals</p>	<p>1 that are so far beyond her realm of</p> <p>2 expertise, she's told you she doesn't know</p> <p>3 the answer to these questions.</p> <p>4 MR. OHLEMEYER: That's fair. With</p> <p>5 your representation, Mr. Cross, I'll move</p> <p>6 on.</p> <p>7 Q. Doctor, my question to you, my question to</p> <p>8 you, Doctor, is do you believe or would you</p> <p>9 agree with me that as of July of 1993, the</p> <p>10 epidemiologists and others who were studying</p> <p>11 the issue of environmental tobacco smoke and</p> <p>12 its relationship to disease had concluded</p> <p>13 there was some uncertainty about the causal</p> <p>14 nature of that association in part due to</p> <p>15 the limitations that are involved in</p> <p>16 assessing exposure to environmental tobacco</p> <p>17 smoke on a historical basis?</p> <p>18 MR. CROSS: Objection, asked and</p> <p>19 answered.</p> <p>20 A. I answered that before.</p> <p>21 Q. And the answer is yes, you agree with that.</p> <p>22 A. My answer --</p> <p>23 MR. CROSS: Objection, restating</p> <p>24 her testimony. That's not what she said.</p> <p>25 A. Yes, you can review the testimony that I</p>
Page 446	Page 448
<p>1 are present inside a building apart from any</p> <p>2 contribution that might be made by</p> <p>3 environmental tobacco smoke?</p> <p>4 A. Are there -- you asked that before. Are</p> <p>5 there any chemicals --</p> <p>6 Q. Can you tell me, Doctor --</p> <p>7 A. Yes.</p> <p>8 Q. -- how many chemicals that you believe to be</p> <p>9 generated or created through other than the</p> <p>10 process of environmental tobacco smoke that</p> <p>11 might otherwise be present in the air in a</p> <p>12 building separate and apart from smoking?</p> <p>13 A. I think you need to get a chemist and</p> <p>14 environmentalist probably from the EPA that</p> <p>15 had studied that area.</p> <p>16 Q. Can you tell me how the level of those</p> <p>17 chemicals in environmental tobacco smoke</p> <p>18 compare to the level of similar or identical</p> <p>19 chemicals that might be found in air</p> <p>20 separate and apart from the contribution of</p> <p>21 tobacco smoke or environmental tobacco</p> <p>22 smoke?</p> <p>23 A. You just asked that question.</p> <p>24 MR. CROSS: You have asked that</p> <p>25 question and you've asked several questions</p>	<p>1 gave before. You keep asking the same</p> <p>2 question. I'm not going to change my</p> <p>3 testimony.</p> <p>4 Q. Can you answer this one yes, no, or I don't</p> <p>5 know: As of July 1993 there was uncertainty</p> <p>6 about the causal nature of the association</p> <p>7 between environmental tobacco smoke and</p> <p>8 disease in view of limitations involved in</p> <p>9 assessing exposure to environmental tobacco</p> <p>10 smoke?</p> <p>11 MR. CROSS: Same question, same</p> <p>12 objection.</p> <p>13 A. I mean, I answered the question before.</p> <p>14 Q. And is the answer yes, no, or I don't know?</p> <p>15 A. You're asking was there a direct cause, was</p> <p>16 there a degree of certainty that</p> <p>17 environmental smoke, environmental tobacco</p> <p>18 smoke caused cancer. Is that what you're</p> <p>19 asking?</p> <p>20 Q. I'm asking you, Doctor, very simply, was</p> <p>21 there --</p> <p>22 A. Can I read it? Can I read it off your</p> <p>23 paper? It's such a long question, I'm</p> <p>24 trying to make sure I get it.</p> <p>25 Q. It's really very simple. As of July of</p>

Page 449

1 1993 -- are you with me so far?
 2 A. Yes.
 3 Q. -- are you aware of any uncertainty
 4 expressed by people studying this subject
 5 about the causal nature of the association
 6 between environmental tobacco smoke and
 7 disease? For any reason.
 8 A. There was a number of literature -- there's
 9 a number of -- a lot of literature out
 10 there, a number of articles that were
 11 published, in fact, I believe there was like
 12 30 additional studies between 1982 and 1994.
 13 you know, that stated that they felt that
 14 there was a causal relationship between
 15 environmental tobacco smoke and lung cancer.
 16 Is that --
 17 Q. And there were also authors and researchers
 18 who believed there was some uncertainty
 19 about that relationship, weren't there?
 20 A. Well, it depends on who the authors were,
 21 who paid them.
 22 Q. Well, how about try this one on, Doctor.
 23 How about Dr. William Blot and Joseph
 24 Fraumeni?
 25 A. Is that that article you just read?

Page 450

1 Q. It's an article you cited in your July 20th
 2 letter, right?
 3 A. I would have to read the article so I did
 4 not misspeak. Do you have the article
 5 there?
 6 Q. Doctor, my question to you is: If that
 7 article contains this statement, would you
 8 agree with me it's not contained in your
 9 July 20, 1993 letter?
 10 MR. CROSS: I'll object to the form
 11 of your question. You're asking her to
 12 speculate on something she says she does not
 13 have committed to memory and then you're
 14 asking her whether she would agree with you,
 15 to agree with your speculation.
 16 Q. Let me ask a better question. Do you
 17 believe -- did you believe, Doctor, in 1993,
 18 that there was any uncertainty about the
 19 causal nature of the association between
 20 environmental tobacco smoke and its
 21 relationship to lung cancer?
 22 A. Did I believe at that time --
 23 Q. That there was any uncertainty about the
 24 causal relationship between, causal nature
 25 of the association between environmental

Page 451

1 tobacco smoke and lung cancer?
 2 A. Let me answer this in this way: Given the
 3 fact that we cannot divorce -- and you're
 4 asking my opinion. I'm not a research
 5 scientist. I did not write these articles.
 6 But in my opinion, you cannot divorce
 7 environmental tobacco smoke from primary
 8 smoke. Since we know that primary smoke
 9 causes lung cancer, it is not very difficult
 10 to surmise that environmental tobacco smoke
 11 caused the same, since the same pollutants
 12 are there, the same cancer-causing
 13 material's there.
 14 Q. Well, let me start right there. If it's
 15 that simple, why did it take somebody until
 16 1981 to publish that opinion?
 17 A. I believe a lot of that is related to --
 18 it's just like AIDS. Why did it take how
 19 many millions of people or how many hundreds
 20 of thousands of people dying before they
 21 realized what was going on? Has to do with
 22 what is out there, what is allowed to be out
 23 there from the tobacco industry.
 24 Q. Well, what do you need to know from the
 25 tobacco industry to buy a pack of

Page 452

1 cigarettes, determine what comes off the end
 2 when they're burned, analyze it chemically,
 3 and determine whether or if those are the
 4 same chemicals that are in mainstream smoke?
 5 A. What do you need to know from the tobacco
 6 industry --
 7 Q. I mean, anybody, using your -- using your
 8 thought process here, Doctor, if cigarette
 9 smoke is bad, then environmental tobacco
 10 smoke must be bad. Why couldn't the surgeon
 11 general in 1964 have proclaimed, if
 12 cigarette smoke causes cancer, environmental
 13 tobacco smoke is going to cause cancer?
 14 A. I think he was going, if I remember -- I
 15 don't have the author's stuff in front of
 16 me. I don't have the papers in front of me,
 17 but I believe in that 1964 there was some
 18 conjecture that there was a danger due to
 19 environmental tobacco smoke. I would have
 20 to look at it to be certain. But there was
 21 some conjecture in that initial report.
 22 Q. So any scientist, researcher, public health
 23 official could have taken that conjecture
 24 and used it as an inspiration, as it were,
 25 or as the motivation to do that kind of

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 453

1 research as early as 1964.
 2 MR. CROSS: Objection.
 3 Q. Right?
 4 MR. CROSS: That question asks her
 5 to widely speculate to something far afield
 6 from the relevance of this case or her
 7 association with it.
 8 Q. What would have prevented somebody, Doctor,
 9 from taking that conjecture and doing
 10 something with it?
 11 MR. CROSS: Same objection.
 12 A. My understanding, there was some scientists
 13 that were doing the work, but it has to do
 14 with money, has to do with how much outside
 15 influences there are. I mean, one of the
 16 reasons AIDS is so -- AIDS research right
 17 now is so prevalent is because there's a lot
 18 of emotion involved, a lot of outside
 19 pressures.
 20 I mean, it has to do with the
 21 population at the time, how much is known,
 22 what can be allowed to be known, how much
 23 money is involved, how many people are
 24 dying.
 25 Q. Do you know how much money cigarette

Page 454

1 companies have contributed to organizations
 2 to conduct research into areas of smoking
 3 and health?
 4 A. What companies have they contributed to?
 5 Q. Well, do you know that? Do you know
 6 whether --
 7 A. I mean, they have their own, like the
 8 Tobacco Research Council that's supposedly
 9 research funded, but my understanding is,
 10 from reading, that they do research and
 11 sometimes they bury it, sometimes they
 12 don't. I don't know.
 13 Q. Well, you read that in Dr. Glantz's book:
 14 right?
 15 A. Yes.
 16 Q. You don't know whether Dr. Glantz is right
 17 or wrong about that, do you?
 18 A. Why would he be wrong? Why would he lie?
 19 Q. Because maybe he doesn't have all the
 20 information, Doctor. Maybe people who have
 21 asked him his opinion haven't given him a
 22 sufficient amount of information to make a
 23 judgment. Is that possible?
 24 A. Maybe the people that what now?
 25 Q. Let me rephrase the question, Doctor. Do

Page 455

1 you know whether the tobacco -- whether any
 2 tobacco company has ever given any money to
 3 the American Medical Association to study
 4 the relationship between smoking and
 5 disease?
 6 A. They may have. I can't tell you for certain
 7 yes or no.
 8 Q. Do you know whether tobacco companies have
 9 given money to universities to study the
 10 relationship between smoking and cancer?
 11 A. They may have.
 12 Q. Do you think that's good or bad?
 13 A. Depends on what is done with the research.
 14 Q. Well, do you think --
 15 A. What kind of stipulations there are, what
 16 happens to the research after it's
 17 developed.
 18 Q. If they give money to organizations to
 19 conduct research and put no stipulations on
 20 what those organizations can do with it, you
 21 wouldn't find that unreasonable, would you?
 22 A. If they put no stipulations on the research,
 23 and the researchers are true to form,
 24 they're not just being paid to conduct
 25 research to make things look good, I would

Page 456

1 have to look at the research.
 2 Q. And you haven't done that.
 3 A. I've looked at some of it, yes.
 4 Q. Through Dr. Glantz's book?
 5 A. No. No.
 6 Q. What have you looked at?
 7 A. There's a research in Canada, there's a
 8 Canadian college that you, the tobacco
 9 research people, paid and they published a
 10 book that was sent to a number of public
 11 libraries talking about that there was no
 12 definite evidence of cancer related to
 13 tobacco.
 14 Q. Doctor, let me ask you this one more time,
 15 and it's really a simple question. In July
 16 of 1993 --
 17 A. Yes.
 18 Q. -- when you wrote your opinions -- and by
 19 the way, the opinions that you've expressed
 20 in Exhibit 21, I take it you stand by those
 21 opinions; right? I mean, it's not something
 22 you've created and sworn to, but it
 23 certainly contains your best, most accurate,
 24 reasonably certain opinions, does it not?
 25 A. The opinions I put in the July 20th was

Page 457

1 related to what I had read, the people that
 2 I had quoted, and that's the way it stands.
 3 yes.
 4 Q. But, I mean, would you have sworn to these
 5 opinions in July of 1993?
 6 A. Would I have sworn. If I had the articles
 7 in front of me, and these are directly
 8 related to the articles and that's what I
 9 got this information from, I would have to.
 10 Q. Where did you get those articles that you
 11 cited in connection with this letter?
 12 A. Well, I spoke before, I most likely did a
 13 lot of research and read the U.S. Surgeon
 14 General's Report, looked at bibliography
 15 from that, talked -- you know, had some
 16 information sent from a number of cites.
 17 Q. Including the lawyers?
 18 A. No. No. They didn't give me any
 19 information to go in this.
 20 Q. Is there any way for us to go back and
 21 figure out what changes you made to this
 22 letter from the June 7th draft that resulted
 23 from any discussions you had with the
 24 lawyers?
 25 A. What changes. Well --

Page 458

1 Q. As you look at this, or think about it, can
 2 you say to yourself the lawyers, you know --
 3 A. The only thing I can tell you is, they
 4 specifically stated you need to be a little
 5 bit more specific, you need to be a little
 6 bit more in-depth. That's it.
 7 Q. And you recall whether they told you you
 8 need to delete anything?
 9 A. No.
 10 Q. And as we sit here today, again, you have no
 11 recollection as to why any particular
 12 sentence or thought was deleted.
 13 A. Not that I'm aware of. Unless you have
 14 something that I don't have.
 15 Q. Doctor, so here's my question: In July of
 16 1993, did you, Dr. Nicki Turner, believe
 17 there was any uncertainty about the causal
 18 relationship between environmental tobacco
 19 smoke and lung cancer?
 20 A. Given what I knew, what I had read, what the
 21 preponderance of evidence was from the
 22 literature, what I had seen, I felt that
 23 there was a causal relationship, since you
 24 cannot divorce environmental tobacco smoke
 25 from primary smoke.

Page 459

1 Q. So in your mind there was no uncertainty
 2 about the causal nature of the association
 3 between environmental tobacco smoke and lung
 4 cancer.
 5 A. I just spoke what I said. I have to state
 6 that, in my mind, from what I had read, the
 7 literature I had read, what I knew about the
 8 substances, the fact that primary smoke
 9 causes lung cancer, that the chemicals are
 10 the same or similar, that there's
 11 chemicals -- that thousands of chemicals
 12 come off the end of a burning cigarette, you
 13 have to make -- and only a lunatic would not
 14 think that there was, you know -- I mean, if
 15 you saw -- I mean, looking at the
 16 literature, looking at what I knew, what I
 17 had read, that's what I felt in July of '93.
 18 Q. As of July 1993, only a lunatic would
 19 conclude that there was any uncertainty
 20 about the causal nature of the association
 21 between environmental tobacco smoke and lung
 22 cancer?
 23 A. What I'm telling you is --
 24 Q. That's the question I want you to answer.
 25 MR. CROSS: Let her answer the

Page 460

1 question.
 2 A. I've answered it four times.
 3 Q. No, Doctor, please listen carefully to the
 4 question. As of July 1993, is it your
 5 opinion that only a lunatic would have
 6 believed there was some uncertainty about
 7 the causal nature of the association between
 8 environmental tobacco smoke and lung cancer?
 9 A. What I'm telling you, in my opinion, the
 10 causal relationship, in my opinion, was
 11 there.
 12 Q. I understand what your opinion is. I
 13 understand how you arrive at your opinion.
 14 What I want you to tell me, Doctor, is
 15 whether you believe that as of July 1993
 16 only a lunatic would have believed that
 17 there was any uncertainty about the causal
 18 nature of the relationship between
 19 environmental tobacco smoke and lung cancer.
 20 A. So you're essentially telling me that I'm
 21 calling anybody else that disagrees with
 22 that a lunatic. Is that what you're saying?
 23 Q. They're your words, Doctor, not mine.
 24 A. Then let's delete that. I'm saying --
 25 MR. CROSS: Doctor, answer the

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 461	Page 463
<p>1 question.</p> <p>2 Q. Go ahead.</p> <p>3 A. You're harassing people; that's what you're</p> <p>4 doing.</p> <p>5 Q. Doctor, I think the record will reflect that</p> <p>6 I'm not harassing you, but --</p> <p>7 A. Yes, you are. You're asking the question in</p> <p>8 eight different types of modes.</p> <p>9 Q. And, you know, Doctor, quite frankly, the</p> <p>10 record might also reflect and reasonable</p> <p>11 minds might believe you haven't answered</p> <p>12 them, but you and I shouldn't have to debate</p> <p>13 that right now.</p> <p>14 My question to you is, using your</p> <p>15 words, do you believe that as of July 1993</p> <p>16 only a lunatic would have believed there was</p> <p>17 any uncertainty about the causal</p> <p>18 relationship between environmental tobacco</p> <p>19 smoke and lung cancer?</p> <p>20 MR. CROSS: Dr. Turner, answer the</p> <p>21 question again for the gentleman, please.</p> <p>22 A. I'm telling you that from my experience on</p> <p>23 July 20th, when I wrote this note, when I</p> <p>24 wrote this dictation, I'm telling you that</p> <p>25 from the research that's out there -- and</p>	<p>1 (A recess was taken.)</p> <p>2 Q. Doctor, if you don't understand the</p> <p>3 question, will you let me know?</p> <p>4 A. Yes.</p> <p>5 Q. How would you characterize -- what level --</p> <p>6 how would you characterize a level of</p> <p>7 exposure to environmental tobacco smoke at</p> <p>8 the VA Medical Center that you would not</p> <p>9 associate as a cause of Mrs. Wiley's cancer?</p> <p>10 A. Well, according to the literature, I believe</p> <p>11 it's from the EPA, there's no safe exposure</p> <p>12 level. So therefore, I mean, that's</p> <p>13 essentially -- I mean, you're asking me --</p> <p>14 Q. The EPA makes an assumption, do they not,</p> <p>15 that there is no safe level of exposure to</p> <p>16 any carcinogen; right?</p> <p>17 A. There's no safe exposure level to</p> <p>18 environmental tobacco smoke.</p> <p>19 Q. No, my question to you, Doctor, is, does the</p> <p>20 EPA make an assumption, in assessing risk to</p> <p>21 health, that there is no safe level of</p> <p>22 exposure to any carcinogens?</p> <p>23 A. I cannot tell you that, you'll have to ask</p> <p>24 them.</p> <p>25 Q. Let me ask you to assume it's true. Then is</p>
Page 462	Page 464
<p>1 I'm not saying somebody is a lunatic or not,</p> <p>2 okay? I'm just saying from the literature</p> <p>3 that's out there, from the people that have</p> <p>4 researched it, okay? There's a number, like</p> <p>5 I said, there was over 30 articles written</p> <p>6 between '82 and '94; additional studies that</p> <p>7 were written.</p> <p>8 From the two studies that were</p> <p>9 published in 1981, January of I believe '81,</p> <p>10 and you quoted those, the fact that you</p> <p>11 cannot divorce primary smoke from</p> <p>12 environmental tobacco smoke, the fact that</p> <p>13 the same chemicals are there, the fact that</p> <p>14 there are over 50 -- there's a number of</p> <p>15 carcinogenic agents, and we know that, in</p> <p>16 environmental tobacco smoke as well as</p> <p>17 primary smoke. We know that. We know that</p> <p>18 lung cancer is related to primary smoke.</p> <p>19 Then the causal relationship. And I would</p> <p>20 have to agree with the studies. That's what</p> <p>21 I've stated.</p> <p>22 MR. CROSS: Can we take a break?</p> <p>23 THE WITNESS: I would like to take</p> <p>24 a break.</p> <p>25 MR. OHLEMEYER: Sure.</p>	<p>1 it -- well, let me rephrase the question.</p> <p>2 If Mrs. Wiley was only exposed to half</p> <p>3 as much environmental tobacco smoke as you</p> <p>4 have assumed she was exposed to, do you</p> <p>5 believe it was still enough to have caused</p> <p>6 her cancer?</p> <p>7 A. If she was exposed to just half --</p> <p>8 Q. Half as much as you have assumed.</p> <p>9 A. Depends. Since there is no safe exposure to</p> <p>10 environmental tobacco smoke, I cannot tell</p> <p>11 you what level would be required or would be</p> <p>12 safe. I mean, obviously, there's no safe</p> <p>13 exposure level.</p> <p>14 Q. That's my question. Your opinion is, is</p> <p>15 that there is no level of exposure to</p> <p>16 environmental tobacco smoke below which you</p> <p>17 would not attribute Mrs. Wiley's lung cancer</p> <p>18 to her exposure to environmental tobacco</p> <p>19 smoke.</p> <p>20 A. You're asking me -- restate the question</p> <p>21 again.</p> <p>22 Q. My question, you have assumed that</p> <p>23 Mrs. Wiley was exposed to environmental</p> <p>24 tobacco smoke at work for 12 years.</p> <p>25 A. Well, later on we find it was 18 years.</p>

Page 465	Page 467
<p>1 Q. Well, you found that out because the lawyers 2 told you that. 3 A. No, we found that out because Philip Wiley 4 told us that. 5 Q. Told the lawyers who told you; right? 6 A. Philip Wiley either told me directly during 7 the time that she was on the ward or from 8 the lawyers, yes, through the lawyers. 9 Q. Let me ask you this: Would your opinion 10 change if Mrs. Wiley was only exposed to 11 environmental tobacco smoke for 12 years? 12 A. Depends on the level of exposure. 13 Q. What about if she was only exposed for ten 14 years? 15 A. Depends on the level of exposure. 16 Q. Okay. What is it about -- what level of 17 exposure over that time period would be 18 necessary to produce the cancer? You keep 19 telling me it depends on the level of 20 exposure -- 21 A. Yes. 22 Q. -- so I want you to tell me at what level of 23 exposure would you not be able to -- 24 A. Depends on how many cigarettes -- I mean, a 25 specialist, an EPA specialist that looked at</p>	<p>1 A. Her risk of lung cancer. 2 Q. My question to you is, is there a level of 3 exposure to environmental tobacco smoke at 4 the VA that could be demonstrated below 5 which you wouldn't be able to say was a 6 cause of her disease? Or are you telling me 7 that any exposure to environmental tobacco 8 smoke at the VA caused her disease? 9 A. I'm saying that at the level that she 10 explained to me that she was exposed to, 11 that's how I made the diagnosis of 12 adenocarcinoma secondary to the 13 environmental tobacco smoke. 14 Q. Well, and all that we have in terms of the 15 information Mrs. Wiley provided to you is 16 contained in your admission note. 17 A. Well, it's contained in the entire record. 18 Q. So it's in -- prior to her death, we ought 19 to be able to find information in the 20 medical records that describes Mrs. Wiley's 21 descriptions to you of her exposure to smoke 22 at work. 23 A. She was exposed -- she was exposed, she 24 stated, 12 years. Later on we found out it 25 was 18 years.</p>
Page 466	Page 468
<p>1 the level that she was exposed to -- 2 obviously, there's -- I mean, from the EPA 3 and from the literature that's out there 4 there is no safe exposure. You're asking me 5 to answer a question -- 6 Q. Well, that's my question, Doctor. Is it 7 your opinion that any exposure to 8 environmental tobacco smoke at the VA 9 Medical Center caused Mrs. Wiley's disease 10 or is it your opinion that there is a level 11 of exposure below which you would not be 12 prepared to say or to opine was a cause of 13 her disease? 14 MR. CROSS: Which of those two 15 questions do you want her to answer? 16 MR. OHLEMEYER: I want her to 17 answer both of them. 18 MR. CROSS: Why don't you ask them 19 one at a time then. 20 Q. Well, Doctor, you keep telling me, these are 21 your words, "it depends on the level of 22 exposure." 23 A. Yes. 24 Q. My question to you is what depends on the 25 level of exposure?</p>	<p>1 Q. But Doctor, later on was after you had 2 already concluded that Mrs. Wiley's cancer 3 was caused by exposure to environmental 4 tobacco smoke; right? 5 A. No. Not -- I can't tell you that for 6 certain because her family -- and I told you 7 this before. I mean, we had a long 8 discussion regarding what was going on. And 9 one of the reasons why -- in fact, one of 10 the reasons why I felt very, very, very 11 strongly that there was a causal 12 relationship between her adenocarcinoma and 13 her lung cancer is because of the smoking 14 exposure, secondhand smoke exposure, as well 15 as to the presentation. 16 Q. Okay. But all you know about that exposure 17 is what they told you. 18 A. Yes. 19 Q. You don't know how many cigarettes were 20 smoked at the VA while she worked there? 21 A. They told me there was a haze. 22 Q. You don't know how many cigarettes were 23 smoked at the VA? 24 A. How many cigarettes cause a haze? 25 Q. Doctor, do you know how many cigarettes were</p>

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 469

1 smoked at the VA while Mrs. Wiley worked
 2 there?
 3 A. How many cause a haze?
 4 Q. Can you answer that question?
 5 A. I cannot tell you how many cigarettes were
 6 smoked.
 7 Q. Do you know how frequently cigarettes were
 8 smoked at the VA Hospital when she worked
 9 there?
 10 A. How frequently cigarettes were smoked at the
 11 VA Hospital.
 12 Q. When she worked there. Do you know that?
 13 A. If someone tells me that they are smoking --
 14 if there was a complete haze over the floor,
 15 and that they smelled heavily of tobacco
 16 smoke --
 17 Q. What does that tell you about how many
 18 cigarettes were smoked at the VA while she
 19 worked there?
 20 A. A fair amount of cigarettes.
 21 Q. Well, how much is a fair amount?
 22 A. I don't know. I can't tell you that.
 23 Q. So the answer to the question is you don't
 24 know how many cigarettes were smoked at the
 25 VA while she worked there.

Page 470

1 A. I'm telling you there was a haze on the
 2 floor where she worked and that she inhaled
 3 that. That's what I'm telling you.
 4 Q. And what you're telling me is something that
 5 someone else has told you. You weren't a
 6 witness to it, right?
 7 A. No, her husband told me that.
 8 Q. And you didn't record that --
 9 A. Or she told me.
 10 Q. -- in your medical records, did you?
 11 A. No.
 12 Q. And you don't know how many cigarettes --
 13 A. Why would I make that up?
 14 Q. -- were smoked to produce that haze, do you?
 15 A. How many cigarettes does it take to produce
 16 a haze in a ward?
 17 Q. You tell me. Does it take one or does it
 18 take more than one?
 19 A. I would suspect it would take more than one.
 20 Q. How many?
 21 A. I can't tell you.
 22 Q. Okay, thank you, Doctor. Do you know how
 23 often cigarettes were smoked in that ward?
 24 A. Enough to produce a haze.
 25 Q. Do you know how often cigarettes --

Page 471

1 A. Using her words.
 2 Q. Do you know how often cigarettes have to be
 3 smoked to produce a haze?
 4 A. Depends on the quality of air there, depends
 5 on the size of the room, depends on the
 6 proximity of where she was.
 7 Q. Tell me what you know about the quality of
 8 the air, the size of the room, and
 9 Mrs. Wiley's proximity of smoke at the VA
 10 Medical Center.
 11 A. The proximity of smoke is the fact she felt,
 12 and she told us, that she was in that.
 13 That's the proximity of smoke.
 14 Q. What do you know about the size of the room
 15 and the quality of the air?
 16 A. I don't know anything about the size of the
 17 room.
 18 Q. What do you know about efforts Mrs. Wiley
 19 made to avoid exposure to environmental
 20 tobacco smoke?
 21 A. My understanding -- and I can't remember
 22 where this was in this history -- is that
 23 she had complained earlier to some of her
 24 supervisors about the amount of smoke that
 25 she was exposed to.

Page 472

1 Q. Doctor --
 2 A. But I can't -- I don't know where it is.
 3 All I remember is that was there someplace.
 4 Q. I can assure you it's not in your admission
 5 note.
 6 A. Okay. Then it is not.
 7 Q. Can you point me somewhere else where it
 8 might be? Show me where you wrote that down
 9 prior to Mrs. Wiley's death.
 10 A. I did not write it down.
 11 Q. Show me where you wrote it down or recorded
 12 it prior to the time that Mr. Wiley called
 13 you and enlisted your help in making his
 14 claim against the VA.
 15 A. I've not talked to Mr. Wiley. I've talked
 16 to the attorneys who talked to Mr. Wiley.
 17 Q. So any information you have about that,
 18 then, came from the attorneys.
 19 A. Any information that I had having to do with
 20 this patient came from the patient's husband
 21 who told the attorneys who told me.
 22 Q. All right. And you were relying on the
 23 attorneys to fairly, accurately, and
 24 completely relay that information to you.
 25 A. Well, I don't see any reason why they

Page 473

1 wouldn't do that. I mean, they're trying to
 2 be honest.
 3 Q. They have a financial interest in the
 4 outcome of the lawsuit, though. You know
 5 that, don't you?
 6 A. I don't know if they do or not.
 7 Q. Attorney Daynard told you that when you
 8 called him in May of '93, didn't he?
 9 A. Not that I'm aware of.
 10 Q. He told you that attorneys would take a case
 11 like this on a contingency fee, didn't he?
 12 A. They may take the case on a contingency fee.
 13 Q. And you understand what that means, don't
 14 you?
 15 A. All I know is if they possibly could win.
 16 Q. They get paid.
 17 A. I don't know. I'm not an attorney so I --
 18 Q. Well, you wrote down contingency fee in
 19 your --
 20 A. Well, I quote what he stated.
 21 Q. Okay. Doctor, if everybody --
 22 Well, do you think everybody's been
 23 exposed to environmental tobacco smoke at
 24 some point in their life?
 25 A. The statistics state and some of the

Page 474

1 literature states that, the general
 2 population, it's almost impossible to
 3 escape.
 4 Q. Then why isn't lung cancer more frequently
 5 observed in lifelong nonsmokers?
 6 A. It has to do with the intensity of the
 7 exposure, the amount of exposure.
 8 Q. And the duration of the exposure.
 9 A. Yes.
 10 Q. And the fate of the exposure once it occurs.
 11 We had that conversation earlier.
 12 A. The fate of the chemicals.
 13 Q. In the body.
 14 A. Yes.
 15 Q. So that suggests to you, does it not, that
 16 there is some level of exposure to
 17 environmental tobacco smoke below which
 18 there's not a risk of disease or an ability
 19 for it to produce cancer in an individual.
 20 doesn't it?
 21 A. Disease.
 22 Q. Let's limit it to cancer. I mean, if I
 23 understand your last --
 24 A. I can't tell you that. I can't tell you
 25 that because of the fact that some

Page 475

1 individual may be exposed to secondhand
 2 smoke and, with other factors, may develop
 3 cancer; or they may not recall that they
 4 were exposed to secondhand smoke and they
 5 develop cancer.
 6 Q. How about individuals who may innocently or
 7 intentionally recall being exposed to more
 8 secondhand smoke than they may have actually
 9 been exposed to; you think that ever
 10 happens? Do you think people overestimate
 11 their prior exposure to a carcinogen or a
 12 substance suspected of causing cancer?
 13 A. Knowing human nature, in the patients I've
 14 taken care of, they probably underestimate.
 15 Q. Do you think it ever happens that people
 16 overestimate?
 17 A. Knowing human nature as I have experienced
 18 with patients, I mean, if you ask a drunk or
 19 an alcoholic how much they drink, you know,
 20 they usually underestimate. If you ask a
 21 chronic smoker how much he smokes, they
 22 usually underestimate. Unless they're -- I
 23 mean, they try to be as truthful as they
 24 can, but in certain situations they're
 25 scared to death, they're frightened.

Page 476

1 Q. Now, Mrs. Wiley was known to you to be a
 2 nurse; right?
 3 A. Yes.
 4 Q. She was known to you to be a nurse that had
 5 supervisory responsibilities at her
 6 facility; right?
 7 A. Yes.
 8 Q. She presumably had engaged herself in some
 9 sort of continuing education during her
 10 years as a nurse?
 11 A. She -- what was your question?
 12 Q. Well, do you think Mrs. Wiley -- well,
 13 because she was a nurse, would Mrs. Wiley
 14 have been obligated to participate in some
 15 continuing education throughout her career
 16 as a nurse?
 17 A. Knowing the VA system, I can't tell you
 18 that. There is a number of nurses that may
 19 or may not. Depends.
 20 Q. You don't know and have never seen
 21 Mrs. Wiley's employment records to know
 22 whether she did that.
 23 A. No.
 24 Q. Do you know whether she was trained to
 25 observe and report and record things in

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 477

Page 477

1 connection with her job as a nurse?
 2 A. Whether she was --
 3 Q. Trained to observe, report, and record
 4 things.
 5 A. I would expect she would but I would not
 6 know that for sure.
 7 Q. Do you know whether she believed
 8 environmental tobacco smoke presented a risk
 9 to her health at the time she began working
 10 at the VA?
 11 A. I can't tell you that for sure.
 12 Q. Do you know whether she was an exemplary
 13 employee, that is to say somebody who met or
 14 exceeded the job description for the
 15 position she held?
 16 A. She stayed there for 18 years or whatever,
 17 and she reached a supervisory position. I
 18 would suspect that she must have done
 19 something to earn that.
 20 Q. By the way, Doctor, you didn't need to know
 21 the cause of Mrs. Wiley's cancer to treat
 22 her, did you?
 23 A. No.
 24 Q. And --
 25 A. Wait a minute. The cause. You're talking

1 A. Smoke or chemicals?
 2 Q. Chemicals in smoke. Smoke constituents. Do
 3 you think the people who smoke cigarettes
 4 are exposed to higher levels of tobacco
 5 smoke constituents than nonsmokers exposed
 6 to environmental tobacco smoke?
 7 A. I've already answered that. The point is.
 8 is that, because of incineration,
 9 environmental tobacco smoke usually is more
 10 toxic and the chemicals have not been
 11 totally incinerated and, therefore,
 12 environmental tobacco smoke can be more
 13 toxic than primary smoke.
 14 Q. Well, Doctor, I'm not talking about
 15 toxicity. I'm talking about --
 16 A. The number of chemicals.
 17 Q. Level of exposure. Do you think people who
 18 smoke cigarettes are exposed to higher
 19 levels of the tobacco smoke constituents
 20 than nonsmokers who are exposed to ETS?
 21 A. You're looking at level of exposure. You're
 22 looking at whether -- okay.
 23 Q. People who eat five apples a day are exposed
 24 to more apples than people who eat two
 25 apples a day.

Page 478

Page 480

1 about the type of cell?
 2 Q. No, Doctor, I'm talking about the etiology
 3 of her cancer.
 4 A. Etiology.
 5 Q. You did not need to know the etiology of her
 6 cancer to treat her, did you?
 7 A. No.
 8 Q. How would you characterize for me a less
 9 than heavy exposure to environmental tobacco
 10 smoke?
 11 A. You've asked this question before. Less
 12 than heavy. What does heavy mean? I mean,
 13 what percentage of particles? What number
 14 of particles in a cubic -- I mean, an
 15 epidemiologist would be able to tell that to
 16 you.
 17 Q. In order to characterize an exposure to a
 18 substance as heavy or less than heavy, would
 19 you need to know how many -- well, strike
 20 that.
 21 You think that people who smoke
 22 cigarettes are exposed to higher levels of
 23 tobacco smoke than people who are exposed to
 24 cigarette smoke passively, as you've defined
 25 the term?

1 My question to you, Doctor, is, are
 2 individuals who smoke cigarettes exposed to
 3 higher levels of the constituents of that
 4 smoke than nonsmokers who are exposed to
 5 environmental tobacco smoke?
 6 A. First of all, how many cigarettes were
 7 smoked by the primary patient? How many
 8 cigarettes were exposed to the environmental
 9 tobacco smoke? Is it equal? Is it 5/5 or
 10 what?
 11 Q. Let's say that we had one person smoke one
 12 cigarette.
 13 A. Yes.
 14 Q. Would that person be exposed to a higher
 15 level of the constituents of that smoke than
 16 an individual sitting across the table from
 17 him who was being exposed to the
 18 environmental tobacco smoke?
 19 A. Statistics and the papers that I have
 20 researched state that environmental tobacco
 21 smoke from that one cigarette contains
 22 higher levels of chemicals and is more toxic
 23 than the smoke that is inhaled by the
 24 smoker.
 25 Q. That's your opinion.

Page 481

1 A. That's from the literature.
 2 Q. Well, Doctor, I take it, then, you'd be
 3 interested in looking at literature that
 4 suggests the contrary; right?
 5 A. Well, get it to me and I'll look at it.
 6 Q. Well, no one's provided you with that
 7 literature?
 8 A. I have not found it in the research that I
 9 have done. I mean it's from the -- I mean,
 10 looking at the people that -- the literature
 11 that I have looked at, the U.S. Surgeons
 12 General and the EPA and a number of other
 13 places.
 14 Q. Are you familiar with literature that
 15 suggests that smoking four to five
 16 cigarettes a day does not significantly
 17 increase your risk of developing lung
 18 cancer?
 19 A. Smoking four to five cigarettes a day --
 20 Q. Does not increase your risk of lung cancer.
 21 A. -- does not increase your risk of lung
 22 cancer. I cannot tell you that. I mean, I
 23 wouldn't smoke one cigarette, let alone four
 24 or five. Would you smoke four or five
 25 cigarettes?

Page 482

1 Q. Doctor, what I would like to know is what
 2 you think, not what your opinion is, but
 3 what you think the literature says. The
 4 people who studied the subject. Not come to
 5 conclusions without studying it. People who
 6 studied it.
 7 Do they think, have they published
 8 evidence to suggest that smoking four to
 9 five cigarettes a day, or less, does not
 10 significantly increase your risk of
 11 developing lung cancer?
 12 A. If the literature is out there and if you
 13 can present it, I will look at it. I mean,
 14 I don't want to state that there is no risk
 15 of lung cancer.
 16 Q. So you are not familiar with literature that
 17 suggests that smoking four to five
 18 cigarettes a day does not significantly
 19 increase a person's risk for lung cancer.
 20 A. I have not read that recently. If I have, I
 21 can't remember.
 22 Q. All right. Do you think that smoking one
 23 pack of cigarettes a year for ten years, not
 24 one a day, one a year for ten years, could
 25 produce lung cancer in an individual?

Page 483

1 A. An epidemiologist would be much more likely
 2 to answer that for you. I mean, if
 3 genetically, other factors, and that's a
 4 number of chemicals that I'm putting in my
 5 body, and I would not -- you know. And I
 6 think there would still be a risk. How high
 7 it is depends on other factors.
 8 Q. How many of the studies that --
 9 epidemiological studies that have been
 10 published on the relationship between
 11 environmental tobacco smoke and lung cancer
 12 demonstrate a statistically significant
 13 increase in risk as a result of that
 14 exposure?
 15 A. My understanding, there's a number of
 16 studies.
 17 Q. Do you know how many?
 18 A. I'd have to look. But I believe a number of
 19 studies.
 20 Q. How many studies suggest that exposure to
 21 environmental tobacco smoke does not
 22 increase one's risk of developing lung
 23 cancer?
 24 A. I can't tell you the number, whether there
 25 are any and how they've skewed the

Page 484

1 statistics. I can't tell you that. Again,
 2 an epidemiologist would be able to tell you
 3 that. I mean, I don't have all the
 4 literature in front of me.
 5 Q. That literature forms the basis of your
 6 opinion, though, doesn't it?
 7 A. Yes.
 8 Q. And how did you familiarize yourself with
 9 that literature in order to arrive at your
 10 opinion?
 11 MR. CROSS: Well, just for the
 12 record, what opinion are we talking about?
 13 Q. Your opinion, Doctor, is that environmental
 14 tobacco smoke can cause lung cancer in
 15 nonsmokers.
 16 A. Yes.
 17 Q. And you cite in your July 20th letter
 18 some -- what do they call them -- reviews,
 19 where people have reviewed the literature
 20 and summarized it.
 21 A. Yes.
 22 Q. Is that the basis from which you reach that
 23 conclusion or have you gone back and
 24 actually looked at the studies yourself?
 25 A. I've looked at the literature that has been

1 published having to do with the studies, as
 2 well as summarized studies.
 3 Q. So you've looked at the studies and you've
 4 looked at the review.
 5 A. Yes.
 6 Q. The summary studies.
 7 A. Yes.
 8 Q. And you can't tell us today how many of
 9 those studies --
 10 A. You want numbers. I'm just telling you the
 11 preponderance of studies have been looked
 12 at, and as I said before, from 1981 to '94
 13 there were 30 studies that revealed that
 14 there was a causal relationship between
 15 environmental tobacco smoke. Now, how many
 16 other studies are out there that the leading
 17 scientists do not agree with, that do not
 18 show that causal relationship, I can't tell
 19 you.
 20 Q. Let's back up for a minute Doctor. I think
 21 you misspoke. Those studies, those
 22 epidemiological studies do not conclude that
 23 there -- the individual studies do not
 24 conclude there is a causal relationship
 25 between exposure to environmental tobacco

1 that's your opinion.
 2 But my question to you is, those
 3 individual studies, the researchers who did
 4 those studies, is it your testimony that in
 5 those studies they conclude that that
 6 relationship is a causal one? Or do they
 7 demonstrate an increased risk, calculate a
 8 relative risk, and leave it to you and
 9 others to conclude whether or if that is a
 10 causal relationship?
 11 A. Well, when I read those studies and when
 12 most individuals that are researching this
 13 information read those studies, we take
 14 that, and I take it, as a causal
 15 relationship since the percentages are such
 16 that there's no other way to define it.
 17 Q. But my question to you, Doctor, is the
 18 people who did that research, are you
 19 telling us that they say in those studies
 20 this is a causal relationship?
 21 A. I can't tell you, I cannot quote them. I
 22 don't have the studies in front of me. But
 23 from reading the literature, there is no
 24 doubt that environmental tobacco smoke, your
 25 risk of developing lung cancer and

1 smoke and lung cancer, do they?
 2 A. My understanding is there is a causal
 3 relationship. They have shown there's a
 4 higher risk of lung cancer in individuals
 5 who are exposed to secondhand smoke.
 6 Q. The epidemiological studies have
 7 demonstrated a higher frequency of lung
 8 cancer in some individuals who have been
 9 exposed to other people's smoke: right?
 10 A. In individuals who are exposed to
 11 environmental tobacco smoke --
 12 Q. There are epidemiological studies --
 13 A. There's an increased relationship.
 14 Q. -- that demonstrate an increased frequency
 15 of lung cancer in those people: right?
 16 A. Yes.
 17 Q. And then, because of that increased
 18 frequency, those researchers, using
 19 well-known techniques, determine the
 20 relative risk of that exposure: right?
 21 A. Yes.
 22 Q. And then, from that information, you and
 23 others have concluded that the relationship
 24 between environmental tobacco smoke and lung
 25 cancer is a causal one. And I understand

1 specifically adenocarcinoma is increased --
 2 Q. And my question --
 3 A. -- from environmental tobacco smoke.
 4 Q. My question to you, Doctor, is, based upon
 5 that epidemiology, let's limit ourselves to
 6 the epidemiology, do those epidemiologists
 7 conclude that, as a result of their data,
 8 there is a causal relationship?
 9 A. Looking at all the factors that are
 10 summarized in some of those articles, I
 11 believe that they are stating that there's a
 12 causal relationship.
 13 Q. Well, I know that's your opinion, Doctor,
 14 but --
 15 A. Well, what else do you want?
 16 Q. Well, if we had all those studies in front
 17 of us, are you telling me I could open them
 18 up one at a time, and in the conclusion
 19 section those investigators would say this
 20 data indicates there is a causal
 21 relationship between environmental tobacco
 22 smoke and lung cancer?
 23 MR. CROSS: Well, I'm going to
 24 object, asked and answered five times by my
 25 count. If you want to get those studies out

Page 489

1 and ask her to testify what they all say.
 2 let's do that.
 3 MR. OHLEMEYER: Mr. Cross, we're
 4 going to have plenty of time at trial to do
 5 that.
 6 Q. But my question to you, Doctor, is it your
 7 understanding that those researchers
 8 concluded in those studies that there was a
 9 causal relationship between environmental
 10 tobacco smoke and lung cancer.
 11 A. I believe what they stated was, their
 12 conclusion was the overwhelming evidence.
 13 and I think that's been quoted in one of
 14 those studies, state that environmental
 15 tobacco smoke is related to lung cancer.
 16 Q. It is related because --
 17 A. I'm just telling you the overwhelming
 18 evidence --
 19 Q. Well, I understand what you're saying,
 20 Doctor. But my point is, do you understand
 21 how an epidemiological study works?
 22 A. I'm not an epidemiologist. Maybe you should
 23 ask an epidemiologist to use those words.
 24 I'm just trying to be truthful with you.
 25 Q. Do you think there's a difference between

Page 491

1 But my question to you is, is it your
 2 understanding that the demonstration of an
 3 increased risk for disease, based on an
 4 epidemiological study, is a synonymous -- or
 5 is synonymous with the conclusion that there
 6 is a cause and effect relationship between
 7 those two things?
 8 A. There is strong evidence that there may be a
 9 cause, yes.
 10 Q. There is evidence of but not dispositive of:
 11 right?
 12 A. Evidence of --
 13 Q. Let me rephrase the question. Does anyone
 14 use epidemiology to prove cause and effect
 15 relationships?
 16 A. Well, we use epidemiology to define the risk
 17 involved and, I mean --
 18 Q. Is defining the risk involved in a behavior
 19 or an exposure the same thing as determining
 20 a cause and effect relationship between that
 21 behavior and that exposure?
 22 A. That's what they do to define the causality.
 23 Q. Is defining a risk the same thing as
 24 determining the cause?
 25 A. Defining the risk is determining the cause.

Page 490

1 demonstrating an increased risk or
 2 demonstrating an association between a risk
 3 factor and a disease and determining whether
 4 or if there's a causal relationship between
 5 those two things?
 6 A. Okay, now --
 7 Q. Do you think, is there a difference in your
 8 mind between the demonstration of a risk
 9 factor for disease in an epidemiological
 10 study and a conclusion that that
 11 relationship is one of cause and effect?
 12 A. It would certainly lend you towards that
 13 relationship, yes.
 14 Q. It would be consistent with the idea that
 15 there is a cause and effect relationship:
 16 right?
 17 A. What I'm saying is --
 18 Q. Do you understand that question, Doctor?
 19 A. You want me to read the mind of an
 20 epidemiologist and speak as an
 21 epidemiologist and I'm not an
 22 epidemiologist.
 23 Q. All I want to know is what your
 24 understanding of epidemiology is, and if you
 25 don't have one you can tell me.

Page 492

1 Q. Is it the same thing? Is identifying the
 2 risks associated with a disease the same
 3 thing as establishing a cause and effect
 4 relationship between those exposures and
 5 that disease?
 6 A. Defining the risk is the same thing as
 7 cause. Is that what you're asking?
 8 Q. That's my question. Do you believe that
 9 when you have demonstrated a risk, using an
 10 epidemiological study, that you have
 11 established a cause and effect relationship?
 12 A. I'm telling you that it increases the chance
 13 that that is, indeed, the cause of the
 14 relationship. And you can't say 100 percent
 15 cause, you know? What I'm pointing to you
 16 is the fact that the literature in this
 17 situation, on environmental tobacco smoke,
 18 states -- the overwhelming evidence states
 19 that environmental tobacco smoke causes lung
 20 cancer.
 21 Q. Yet the epidemiology doesn't suggest that
 22 your chances of developing lung cancer --
 23 well, strike that.
 24 The epidemiology doesn't indicate that
 25 it is more likely than not that a lung

Page 493

1 cancer occurring in a nonsmoker was caused
 2 by exposure to environmental tobacco smoke.
 3 A. You're saying -- rephrase that question.
 4 Q. Well, isn't it a fact, Doctor, that the
 5 epidemiology itself is insufficient, is an
 6 insufficient basis from which you
 7 conclude -- strike that.
 8 You rely on more than the epidemiology
 9 to come to your conclusion that
 10 environmental tobacco smoke can cause lung
 11 cancer in nonsmokers.
 12 A. The epidemiology that's out there in these
 13 studies, and the studies that have been
 14 completed, and the number, over 30 studies
 15 up until 1994, state that, and their
 16 summaries state that, because of the
 17 evidence that they've looked at, the number
 18 of subjects that they've looked at, the
 19 exposure, there is evidence, overwhelming
 20 evidence that there is a relationship
 21 between environmental tobacco smoke and
 22 cancer, lung cancer.
 23 Q. And that relationship is expressed as a
 24 relative risk: right? Or knowledge ratio in
 25 those studies?

Page 494

1 A. Yes.
 2 Q. And when you say "overwhelming," do you mean
 3 statistically significant in a 95 percent
 4 confidence interval?
 5 A. Since I'm not an epidemiologist --
 6 Q. Well, you understand what a confidence
 7 interval is: right?
 8 A. To a certain extent, yes.
 9 Q. Tell us what the significance of a 95
 10 percent confidence interval is.
 11 A. I would suspect, not being an
 12 epidemiologist, that there is a significant
 13 or a high level of confidence in that data.
 14 Q. As opposed to the result being -- as opposed
 15 to the data or the conclusion being the
 16 result of chance, mistake, or bias.
 17 A. Yes. Yes.
 18 Q. Doctor, what do you know about the Fontham
 19 study? F-O-N-T-H-A-M.
 20 A. It was a study, and I'd have to put it in
 21 front of me -- I have it in there, I know.
 22 in my office. It had to do with, I believe,
 23 secondhand smoke, but I can't remember
 24 what -- in what population. You have the
 25 study in front of you that I could review?

Page 495

1 Q. Well, I'm just asking you whether or if you
 2 make use of that -- whether you're familiar
 3 with the study and whether you've used it as
 4 one of the bases for your opinions in this
 5 case.
 6 A. I can't tell you that. I'd have to look at
 7 the study again.
 8 Q. Doctor, let me hand you now what I have
 9 marked --
 10 Let me do this, Doctor. Would you find
 11 for me your -- excuse me, Doctor, I'd like
 12 to ask you --
 13 A. I'm trying to look at the Fontham study that
 14 you asked me about.
 15 Q. I'm asking you to tell me everything you can
 16 tell me about it right now.
 17 A. I can't tell you because there's a number of
 18 studies in this box. I need to --
 19 Q. Do you recall or can you tell me how you
 20 used it in forming the opinions you've
 21 reached in this case?
 22 A. I'd have to look at the study.
 23 Q. Do you know -- you have read it, right?
 24 A. Yes. But I -- I mean, this was written in
 25 1993. That was four years ago.

Page 496

1 Q. Do you recall when Fontham was published?
 2 A. No.
 3 Q. Do you recall how it --
 4 A. You have it in front of you, don't you?
 5 Q. Do you recall or do you know how it compares
 6 to the other studies in terms of how big it
 7 was --
 8 A. No.
 9 Q. -- or how well controlled it was --
 10 A. No.
 11 Q. -- or how confident the authors were of
 12 their conclusions?
 13 Why don't you take a look at your June
 14 6th bronchoscopy report, which we haven't
 15 marked that as an exhibit. I will, but I
 16 think --
 17 Do you have it in front of you or do
 18 you want me to put it in front of you?
 19 Doctor, let me hand you a copy --
 20 MR. OHLEMEYER: Let me just mark
 21 this as the next in order. And then mark
 22 this as the next after that.
 23 (Deposition Exhibit(s) 29-30 marked for
 24 identification.)
 25 Q. Doctor, let me hand you No. 29 and 30 which

Page 497

1 are the June 6th and July 22nd reports;
 2 right?
 3 A. Yes.
 4 Q. Tell me how you went about preparing the
 5 June 6th report.
 6 A. That was dictated after I completed her
 7 bronchoscopy.
 8 Q. Why do you dictate a report after you
 9 complete a bronchoscopy?
 10 A. So there is a written record of that report.
 11 Q. It's your standard practice?
 12 A. Yes.
 13 Q. From what do you dictate? From memory or
 14 from notes or --
 15 A. Both from memory as well as notes.
 16 Q. And where would the notes be from which you
 17 dictated that?
 18 A. It would be in the progress note.
 19 Q. So we ought to be able to find a progress
 20 note that corresponds to that procedure;
 21 right?
 22 A. Yes.
 23 Q. All right. Now, Doctor, it says, in the
 24 June 6th report, that Mrs. Wiley was
 25 admitted on 5/29 with a right lung mass?

Page 498

1 A. Yes.
 2 Q. That's by x-ray; right?
 3 A. Yes.
 4 Q. Dr. Patel had done a bronchoscopy prior to
 5 5/29; right?
 6 A. Yes.
 7 Q. And he didn't observe a right lung mass
 8 using the bronchoscope; right?
 9 A. Yes. That's what he stated.
 10 Q. Now, you see the next exhibit, the 7/22
 11 report?
 12 A. Yes.
 13 Q. Tell me why and how you dictated that
 14 report.
 15 A. Well, as often happens, I don't know often,
 16 but as happens in the hospital, when I got
 17 the chart back to sign -- this is when they
 18 were still keeping -- and we've only
 19 switched to a computer in the last two to
 20 three years, this was all by -- we would
 21 have charts that were kept in medical
 22 records, we would dictate, the dictation
 23 would be filed by somebody from medical
 24 records, and that's where this came from.
 25 Q. "This" being?

Page 499

1 A. June 6th, '91.
 2 Q. Well, when did you receive that?
 3 A. Well, what I'm stating to you is the fact
 4 that, this is what happened, this is the
 5 reason why you have two dictations. First
 6 of all, when they -- and this happens
 7 sometimes with H&Ps, as with surgical
 8 reports, with discharge summaries. They
 9 will state "this has not been dictated" so
 10 we go back and we go back from our notes as
 11 well as our memories and dictate another
 12 time.
 13 Q. Well, the other time you dictated your
 14 report of this procedure was a month after
 15 Mrs. Wiley died; right?
 16 A. Yes.
 17 Q. It was almost two months after you did the
 18 procedure; right?
 19 A. July 22nd, June 6th.
 20 Q. Okay. And the July 22nd report differs in
 21 several respects from the June 6th report;
 22 right?
 23 A. I don't know. We'd have to go line-by-line.
 24 Q. Have you gone through this recently?
 25 A. I've read through it.

Page 500

1 Q. Did you read through it with the lawyers
 2 last week and Dr. Songer?
 3 A. I have not read it with Dr. Songer, no.
 4 Q. Did you read through it with the lawyers
 5 last week?
 6 A. Not last week, no.
 7 Q. When?
 8 A. We went through, they were asking me
 9 questions about why there was two
 10 dictations.
 11 Q. When did they ask you those questions?
 12 A. Just last night.
 13 Q. How long did you meet with them last night?
 14 A. 45 minutes to an hour maybe, at the most.
 15 Q. What else did -- did they show you these
 16 reports last night?
 17 A. Yes, because they wanted to know why there
 18 was two dictations.
 19 Q. What else did they show you last night?
 20 A. Well, the hospital chart. The progress
 21 notes.
 22 Q. They show you any of Dr. Songer's deposition
 23 exhibits?
 24 A. No.
 25 Q. Have you read his deposition?

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 501

1 A.No.
 2 Q.Have you heard about his deposition?
 3 A.No.
 4 Q.What did you tell them about why there were
 5 two reports?
 6 A.Same thing I just told you. That medical
 7 records, you dictate a report and they say,
 8 "You didn't dictate it," and you cuss and
 9 you say, "Yes, I did," and they say, "No,
 10 you didn't," and you dictate another one and
 11 both of them end up in the medical record.
 12 Q.Do you ever watch the program ER?
 13 A.Occasionally. I don't have much time to
 14 watch television.
 15 Q.Did you watch it last Thursday?
 16 A.No.
 17 Q.You sure?
 18 A.I've got so many patients, I don't have time
 19 to watch television. What was it about?
 20 (Discussion off the record.)
 21 Q.Doctor, one other question. Back, I don't
 22 mean to press this about your father, but do
 23 you have any health-related problems that
 24 you attribute to your father's cigarette
 25 smoking?

Page 502

1 A.I have asthma.
 2 Q.Do you attribute your asthma to your
 3 father's cigarette smoking?
 4 A.It's difficult to state, say that, because.
 5 since my asthma began at the age of 18 and I
 6 had moved out and I was in school, but it's
 7 difficult to define yes or no whether that
 8 is related to me.
 9 I do have multiple allergies. And my
 10 father had allergies, some allergies, but
 11 not as -- I have multiple, multiple
 12 allergies.
 13 Q.Are you allergic to fragrances?
 14 A.Yes.
 15 Q.Do you -- I mean, does it bother you if
 16 people wear perfume or aftershave in your
 17 presence?
 18 A.Yes.
 19 Q.When did you associate or consider whether
 20 your asthma might have been associated with
 21 your father's cigarette smoking?
 22 A.Well --
 23 Q.I'm not looking for a date. I mean, was it
 24 during medical school? Was it while you
 25 were living at home? Was it yesterday? You

Page 503

1 know what I'm saying.
 2 A.No. From about the age of 18 on I developed
 3 asthma, a certain amount of asthma. But in
 4 the last, probably the last 14 years it's
 5 gotten much worse.
 6 Q.So within 14 years ago did you begin to
 7 consider whether or if your asthma may have
 8 been associated?
 9 A.It's difficult to say. Probably off and on.
 10 Off and on. It's hard to say. I mean --
 11 Q.Off and on as long ago as 14 years ago.
 12 A.Or even longer.
 13 Q.Back to the two exhibits in front of you
 14 which are Nos. 29 and 30, Doctor. There's a
 15 change in the July 22nd report from the June
 16 6th report about the reasons for
 17 Mrs. Wiley's admission. Can you tell me why
 18 you made that change?
 19 A.Was admitted on 5/29 with a right lung mass,
 20 as well as severe bone pain. And that was
 21 from the June 6th. A myelogram revealed
 22 significant necrosis of L2 pedicle. Bone
 23 scan revealed widely metastatic lesions in
 24 the skull and femur.
 25 The other one, on July 22nd, was

Page 504

1 admitted with severe shortness of breath, as
 2 well as partial collapse of the right lower
 3 lobe. The patient had evidence of a
 4 metastatic lesion of the bone and
 5 lumbosacral spine. To obtain specimens.
 6 Highly suspect that she may have a lung
 7 cancer.
 8 I don't consider those that
 9 significantly different.
 10 Q.They're different, though, aren't they?
 11 A.Well, yeah, but --
 12 Q.They contain different facts?
 13 A.Well, essentially the same facts, as she did
 14 have bone pain, she had a right lung mass,
 15 and there was partial collapse of the right
 16 lower lobe on the 22nd. You know, on the
 17 July 22nd. I don't consider them that
 18 different.
 19 Q.Well, the June 6th report doesn't say it was
 20 highly suspected she may indeed have lung
 21 cancer, does it?
 22 A.She had a right lung mass.
 23 Q.It doesn't say it was highly suspected that
 24 she may indeed have lung cancer, does it?
 25 A.She had a right lung mass.

Page 505

1 Q. Doctor, this is a simple question. Does the
2 June 6th --
3 A. I know it is. But you're asking, as a
4 physician --
5 Q. Well, my --
6 A. -- if somebody has a right lung mass,
7 then -- I mean, what we're doing is a
8 bronchoscopy to obtain specimens. The
9 patient had severe bone pain, she had
10 necrosis of the L2 pedicle, and there was
11 widely metastatic lesions in the skull and
12 femur, was needed to affirm a primary
13 lesion.
14 Q. When Mrs. Wiley was admitted on the 29th of
15 May you had an x-ray.
16 A. Yes.
17 Q. That may or may not -- that the radiologist
18 who reviewed it said may or may not
19 represent a lung mass; it may also represent
20 an atypical pneumonia. Right?
21 A. Let's look at that. Let's look at the
22 x-ray, okay?
23 Q. It doesn't have to be that complicated.
24 Doctor. My question to you is, isn't it a
25 fact that there is a sentence in the July

Page 506

1 report that is not in the June report, and
2 that sentence is "It was highly suspected
3 that she may indeed have lung cancer"?
4 A. What does the other report say?
5 Q. Well, it does not say it was highly
6 suspected that she may indeed have lung
7 cancer; right?
8 A. To affirm a primary lesion. "Bronchoscopic
9 evaluation was needed to affirm a primary
10 lesion." On June 6th. So therefore, a
11 primary lesion is a lung mass.
12 Q. Well, Doctor, I'm not going to quibble with
13 you, we'll let the jury decide whether it
14 does or it does not say it was highly
15 suspected.
16 A. Well, I'm just telling you, from a
17 physician's standpoint, these are the same
18 histories.
19 Q. Well, my question to you is, that's my
20 question. Even though there are two
21 different descriptions here, your testimony
22 is these were the same histories, admission
23 histories.
24 A. From the same situation, yes.
25 Q. All right.

Page 507

1 A. Just because you use different words doesn't
2 mean you don't mean the same thing.
3 Q. Well, that's your testimony.
4 Now, Doctor, you didn't mention severe
5 shortness of breath in your 5/30 admission
6 history, did you?
7 A. 6/6 or 7/22?
8 Q. 5/30. May 30 admission note. Doesn't say
9 anything about severe shortness of breath:
10 right?
11 A. Let's see here. Let me look through here.
12 Q. Doctor, let me just, to move this along,
13 I'll just withdraw the question because it
14 doesn't, and I really don't need you to
15 agree or disagree with me. We can establish
16 that pretty simply.
17 MR. CROSS: We're making progress
18 now.
19 THE WITNESS: Well --
20 Q. Let me ask you this, Doctor. Do you mind,
21 Doctor?
22 A. Yes. Fine. Go ahead.
23 Q. In June, on June 6th of 1991, you've got a
24 woman who you suspect is having a primary
25 carcinoma of the lung; right?

Page 508

1 A. Yes.
2 Q. You have a history --
3 A. Well, I don't know if she's got a primary or
4 not. I'm saying she's got a lung mass on
5 her x-ray, she's got a full right hilum,
6 she's got volume loss, she's got metastatic
7 lesions to the bone. You know --
8 Q. She's got a history of environmental tobacco
9 smoke exposure; right?
10 A. She had that, yes. We surmised that.
11 Q. And so you're doing a bronchoscopy on June
12 6th and what you're looking for is an
13 endobronchial lesion; right?
14 A. What I'm looking for, this lady came in --
15 this lady came in with bone pain. Lower
16 lumbar bone pain. Well, when she came in,
17 we were concerned that there was something
18 eating away at her bone.
19 Now, when we look at the entire
20 picture, she had an abnormal chest x-ray.
21 That's when -- and with her history and the
22 fact that she had a cough, the fact that she
23 had hemoptysis, or coughing up blood, the
24 fact that she had been sick for some time,
25 then we decided that -- I mean, look at the

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 509

1 whole picture.
 2 Q. And what you were looking for would -- I
 3 mean, an endobronchial lesion would be
 4 consistent with the picture of a primary
 5 carcinoma of the lung in an individual with
 6 a history of environmental tobacco smoke
 7 exposure; right?
 8 A. You can get lung cancer from environmental
 9 tobacco smoke.
 10 Q. And you had a woman who you knew and
 11 believed to have been exposed to
 12 environmental tobacco smoke; right?
 13 A. Yes.
 14 Q. You suspected she had a lung cancer.
 15 A. I suspected from the history, from the
 16 clinical presentation, from the right hilar
 17 lesion, from the CT report.
 18 Q. And so you did a bronchoscopy.
 19 A. Yes.
 20 Q. And a significant observation in that
 21 bronchoscopy would have been the finding of
 22 an endobronchial lesion, in your opinion.
 23 A. We found that she had an endobronchial
 24 lesion.
 25 Q. As you put the scope into Mrs. Wiley's

Page 510

1 body --
 2 A. Yes. Yes.
 3 Q. -- you're saying to yourself, I'm looking
 4 for an endobronchial lesion.
 5 A. No, I wouldn't say that. I'm looking for
 6 tissue. You're putting words in my mouth.
 7 I'm looking for tissue. I was not
 8 suspecting an endobronchial lesion. I did
 9 not do the bronchoscope looking for an
 10 endobronchial lesion. I was looking for a
 11 source and a primary that would explain the
 12 rest of her symptoms.
 13 Q. And in the June 6th report, you note the
 14 absence of an endobronchial lesion in the
 15 right lung.
 16 A. Okay. What it says here, okay, this is in
 17 relation to the carina. "The carina
 18 appeared to be markedly broadened
 19 anteriorly," which means that there are
 20 lymph nodes involved in the subcarinal area.
 21 "The left upper, lower, and lingular
 22 segments were inspected carefully. All
 23 segments were patent," which means they were
 24 open, "and appeared normal."
 25 Q. My question is, is once you put the

Page 511

1 bronchoscope into the right main stem, you
 2 didn't find any evidence of endobronchial
 3 lesions.
 4 A. In the right -- "upon entering the right
 5 upper lobe segments, marked mucosal mounding
 6 was noted."
 7 Q. And no evidence of endobronchial lesions
 8 were noted in the right upper lobe.
 9 A. No evidence of endobronchial lesions were
 10 noted in the right upper lobe.
 11 Q. "However, with insertion --"
 12 A. "Insertion of the bronchoscope into the
 13 bronchus intermedius, there was total
 14 occlusion of the airway."
 15 Q. There's a period there, isn't there?
 16 A. I know but that's -- that has to do with
 17 dictation and has to do with when they --
 18 just like she is. She's trying to put all
 19 this together as we're talking. You know,
 20 they're going to do the same thing.
 21 Q. Well, Doctor, you read this dictation, don't
 22 you?
 23 A. Yes.
 24 Q. And you're doing it for a reason; right?
 25 That's to create an accurate and complete

Page 512

1 medical record. Right?
 2 A. I'm reading the dictation to you right now,
 3 yes.
 4 Q. No, when you, in June, when you dictate
 5 this.
 6 A. Yes. Well --
 7 Q. This isn't an idle, superfluous task for
 8 you, is it? It's important, isn't it?
 9 A. Well, yes.
 10 Q. And it says right here that there was no
 11 evidence of endobronchial lesions --
 12 A. Were noted.
 13 Q. -- noted.
 14 A. "However, with the insertion of the
 15 bronchoscope into the bronchus intermedius,
 16 there was total occlusion of the airway with
 17 tumor and mucosal edema."
 18 Q. And it does not say, in your impression
 19 here, that you have endobronchial lesions,
 20 does it?
 21 A. "Primary neoplastic process right main stem
 22 with total occlusion of the bronchus
 23 intermedius and obstruction of the middle
 24 and lower lobe segments." That's what it
 25 says.

Page 513

Page 515

1 Q. It does not say in the June 6th dictation
2 that you have probable carcinoma of the lung
3 with metastatic lesions to both vertebrae as
4 well as to the chest wall, does it?
5 A. In June 6th, my bronchoscopy note --
6 Q. Does not say probable carcinoma of the lung
7 with metastatic lesions to both vertebrae,
8 as well as to the chest wall, does it?
9 A. No.
10 Q. The June 6th report does not report any
11 abnormality of the right main stem bronchus.
12 does it?
13 THE WITNESS: Go back to the
14 question before this.
15 (The requested material was read back
16 by the reporter.)
17 Q. Those words do not appear there, do they,
18 Doctor?
19 A. No.
20 Q. They do appear in your July dictation, do
21 they not?
22 A. Yes.
23 Q. And the statement, "the impression of
24 widened carina suggestive of extensive
25 mediastinal lymph nodes --"

1 gathered the information, we're trying to
2 make an impression of what we believe is
3 going on.
4 Q. And am I correct that the impressions
5 described in your June report are different
6 than the impressions described in the July
7 report?
8 Let's put it this way: The language
9 you used to describe those impressions is
10 different in your June report than it is in
11 your July report.
12 A. The language described is different, but it
13 doesn't mean -- it doesn't seem -- say the
14 same. It means I didn't mimic my two
15 reports.
16 Q. Why did you mention suspect squamous cell in
17 the first report but not in the second
18 report?
19 A. Because when I saw the endobronchial lesion.
20 that is most -- you see that most
21 frequently -- I mean most typically, the way
22 it appeared, was a squamous cell carcinoma.
23 Q. Well, but we're only talking about one
24 bronchoscopy here; right? Just two
25 different dictations; right?

Page 514

Page 516

1 A. Yes.
2 Q. -- is likewise not contained in your June
3 6th report, is it?
4 A. Well, what it says is the left -- the carina
5 appeared to be markedly broadened
6 anteriorly.
7 Q. Under the impressions, 1. 2. 3. does it say
8 widened carina suggestive of extensive
9 mediastinal lymph nodes?
10 A. That's what it says, yes.
11 Q. In the July report.
12 A. Yes.
13 Q. It does not say that in the June report,
14 does it?
15 A. No.
16 Q. All right. Now, Doctor --
17 A. That does not mean -- in my dictation it
18 says "markedly broadened anteriorly." That
19 means, if you look at the carina, and it is
20 broadened, that is a sign of subcarinal
21 infiltration of tumor into the lymph nodes.
22 Q. What's the point, Doctor, of listing these
23 impressions the way you do here with a big,
24 all capital "IMPRESSION: 1. 2. 3"?
25 A. After doing the bronchoscopy and after we

1 A. Yes.
2 Q. In the first one, you say "suspect squamous
3 cell" --
4 A. Yes.
5 Q. -- as one of your impressions. You don't
6 include that in the second one, the July
7 one. Why not?
8 A. Because it's a different time. It doesn't
9 mean that it's not there. It just means
10 that I dictated it after the first one.
11 Q. You dictated it --
12 A. I mean, if you dictate two letters and don't
13 look and read it off, do you dictate it
14 exactly the same or do you change it?
15 Q. Well, you changed this one, didn't you?
16 A. I didn't change it. I just dictated it
17 differently.
18 Q. And in the second one, the July one --
19 strike that.
20 You don't include the impression of
21 suspect squamous cell in the July dictation;
22 right? The July report.
23 A. It does not say that I did, yes.
24 Q. Now, you dictated the July report after you
25 had dictated the death summary, didn't you?

Page 513 - Page 516

STEWART-RICHARDSON & ASSOCIATES
COURT REPORTERS (317) 237-3773

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 517

1 A. Well, what day is the death summary
2 dictated? Okay, the 21st.
3 Q. So you dictated the second report of the
4 bronchoscopy after you dictated the death
5 summary.
6 A. Yes.
7 Q. So you dictated the second report of the
8 bronchoscopy after you had concluded that
9 Mrs. Wiley suffered from a metastatic
10 adenocarcinoma of the lung secondary to
11 secondhand smoke.
12 A. Yes.
13 MR. OHLEMEYER: All right. Can we
14 take a very quick break and then let me try
15 to wrap this up. We've got to get out of
16 here by 5; right? Let me take a quick
17 break.
18 (A recess was taken.)
19 Q. Dr. Turner, if you don't understand a
20 question I ask will you let me know?
21 A. Yes. I don't understand about ER; what was
22 that about?
23 Q. Well, you know, just wondering.
24 Do you recall Mr. Wiley calling you or
25 your office and asking for a copy of the

Page 518

1 autopsy report?
2 A. If he did, I'm not aware of it. I mean, he
3 may have, I can't remember.
4 MR. OHLEMEYER: Well, let's mark
5 this as the next in order.
6 A. He must have.
7 (Deposition Exhibit(s) 31 marked for
8 identification.)
9 Q. It's a telephone note, Doctor, to you:
10 right?
11 A. Yes.
12 Q. Dated?
13 A. September '91.
14 Q. That's three, four months after Mrs. Wiley
15 died?
16 A. Yes.
17 Q. Do you recall talking with Mr. Wiley about
18 the autopsy at that point?
19 A. I do not recall that I talked to him. If I
20 did, I don't recall.
21 Q. Do you recall or have you become aware by
22 any reason why he was calling to ask for the
23 autopsy report? Do you know anything about
24 that?
25 A. No. I mean, a number of patients call and

Page 519

1 ask for autopsy reports. It's not unusual
2 to have that happen.
3 Q. Do you find that people do that who are
4 dissatisfied with the care they've received
5 or their patient -- their family members
6 have received at the hospital?
7 A. You know, it's interesting, in 14 years of
8 practice, I've never had anybody ask for an
9 autopsy report -- first of all, I can't
10 think of a time I've been sued. That I can
11 remember. I would think I would remember
12 that.
13 Q. And you can't ever remember somebody calling
14 and asking --
15 A. Calling and saying that I was dissatisfied
16 with the care and, therefore, I want the
17 autopsy report.
18 Q. Can you recall anyone calling and asking for
19 the autopsy report for any reason?
20 A. Yes. That's what I just said. I mean,
21 they -- people have autopsies, they have
22 questions, they want the autopsy report, and
23 we send it to them if they request it.
24 That's their -- I mean, that's their right.
25 Q. Doctor, let me hand you a copy of a page

Page 520

1 that is contained in Exhibit 15 that was
2 previously produced in your prior session of
3 deposition. Can you explain that for me?
4 MR. WAGNER: Is that Exhibit 32?
5 MR. OHLEMEYER: No, it's part of
6 Exhibit 15.
7 Q. Says "Roger Johnson" at the top. What's the
8 next word say there? Marion VA?
9 A. I can't read it.
10 Q. Something director?
11 A. I can't read it. I can't read it. Says
12 where or when or where does something
13 treatment stop, we need to fax a --
14 Q. Fix a point?
15 A. I don't know. I don't know.
16 Q. And who did you write this note to? That's
17 your note; right?
18 A. No, that's not my writing. My writing is
19 "What does this mean? NC Turner." I don't
20 know anything about the other.
21 Q. Okay.
22 A. I mean, I don't even know if I figured out
23 what that meant.
24 Q. So you don't have any idea what that means?
25 A. No. I mean, it does if you can explain it

Page 521

1 because I can't. "Where does --"
 2 Q. I'm asking you, Doctor.
 3 A. I can't read the -- Roger Johnson, I don't
 4 know who Roger Johnson is. And I can't --
 5 where does something stop. Treatment stop;
 6 I don't know what that is. We need to
 7 either fax or fix; I don't know which one.
 8 Where, when something, picks it up. That's
 9 all I know.
 10 Q. Doctor, is it fair to say that a factor, if
 11 not one of the most important factors in the
 12 process by which you reached your opinion
 13 about the cause of Mrs. Wiley's cancer was
 14 your inability to identify or rule out her
 15 exposure to other carcinogens?
 16 A. The question is, is the reason -- now, the
 17 question is --
 18 Q. My question, Doctor, is, how big a role, or
 19 how big a factor is it, in your opinion, the
 20 process by which you came to your opinion,
 21 was your inability to identify another
 22 potential cause of Mrs. Wiley's disease?
 23 A. There is no factor. I mean, I would not put
 24 that on a death certificate. I would not
 25 dictate that in my death summary if -- just

Page 522

1 because I didn't have any other etiology I
 2 would do that and would just kind of pull it
 3 out of the air?
 4 Q. Well, tell me, then, what process, by what
 5 process or by what method you ruled out
 6 other potential etiologies in this case.
 7 A. Well, the lady was not a primary smoker, she
 8 had no other risk factors that we were aware
 9 of, other than --
 10 Q. That's my question.
 11 A. -- environmental tobacco smoke.
 12 Q. What effort did you make or how did you
 13 investigate her exposure to other risk
 14 factors?
 15 A. Other risk factors being?
 16 Q. Did you ask her whether she was exposed to
 17 asbestos?
 18 A. I may have or may have not. If it's not in
 19 the dictation I can't tell you whether I did
 20 or not.
 21 Q. Did you ask her whether she was exposed to
 22 any other carcinogens?
 23 A. Carcinogens from?
 24 Q. Carcinogens.
 25 A. Well, you don't always ask that from a

Page 523

1 patient. I mean, what you do is you take a
 2 history. you get as complete a history as
 3 you can, and you go and look at the
 4 investigation. And again, when this lady
 5 came in, she had bone mets, and it was only
 6 after a thorough evaluation, looking at all
 7 the evidence, that we came up with primary
 8 lung cancer.
 9 Q. But my question, Doctor, is how did you
 10 assemble any evidence about her potential
 11 exposure to other risk factors?
 12 A. From my H&P. I mean, if she had been
 13 exposed to asbestos, I would have put that
 14 down there.
 15 Q. Do you know whether -- you can't tell me
 16 whether you even -- whether you asked her
 17 that question, did you? Did you ask her,
 18 "Were you exposed to asbestos?"
 19 A. It's not in my dictation.
 20 Q. Did you ask her whether she had been exposed
 21 to radon?
 22 A. It's not in my dictation.
 23 Q. Did you ask her about her diet?
 24 A. No. I did not ask her about her diet.
 25 Q. Did you ask her whether she had been exposed

Page 524

1 to any other chemicals suspected of causing
 2 cancer?
 3 A. If you look at the reasons of why people
 4 develop -- first of all, again, we had a
 5 patient that came in with metastatic tumor,
 6 we had a patient that had some type of
 7 lesion invading their bone. When I took
 8 this history, when I took the H&P, I was
 9 looking at why this patient had an abnormal
 10 chest x-ray, and of all the things that
 11 happened to her, what my most likely course
 12 of investigation would be.
 13 Q. But that was to diagnose her and treat her;
 14 right?
 15 A. Diagnose and treat her.
 16 Q. Now we're talking about determining what
 17 caused her disease.
 18 A. Yes.
 19 Q. What effort did you make to determine what
 20 other things she might have been exposed to
 21 that could have caused her disease?
 22 A. Well, the top sources of lung cancer include
 23 primary or secondary smoke. I did not ask
 24 her about radon; most individuals aren't
 25 aware of that.

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 525

1 Q. So how could you rule it out in this case?
 2 A. Because it's such a small level of
 3 incidence, I mean, it did not come up.
 4 Q. Well, you didn't ask her about it, did you?
 5 A. No. Apparently I didn't. Most people
 6 don't -- do you know if there's radon in
 7 your house?
 8 Q. How do you rule out an etiology in this case
 9 that you haven't been made aware of?
 10 A. You look at the statistics and you look at
 11 what's the most likely cause.
 12 Q. My question, Doctor, is exposure to
 13 environmental tobacco smoke the most likely
 14 cause of lung cancer in a nonsmoker?
 15 A. Is --
 16 Q. Look at the statistics.
 17 A. Yes.
 18 Q. Based on the statistics --
 19 A. There's approximately 4,000 --
 20 Q. -- is environmental tobacco smoke --
 21 A. -- lung cancer deaths due to environmental
 22 tobacco smoke.
 23 Q. And are there more or less than 4,000?
 24 A. There's approximately 4,000 nonsmoker
 25 tobacco deaths due to radon. Now, in this

Page 526

1 situation --
 2 Q. So using the statistics -- bear with me.
 3 Doctor. Using the statistics, environmental
 4 tobacco smoke is not the most likely cause
 5 of lung cancer in a nonsmoker, is it?
 6 A. I mean, it sounds -- if there's 4,000 and
 7 4,000 --
 8 Q. Then the answer is, it is not the most
 9 likely cause of lung cancer in a nonsmoker.
 10 if those numbers are correct.
 11 A. If those numbers are correct. However, in
 12 this situation --
 13 Q. In fact, Doctor --
 14 MR. CROSS: Let her finish her
 15 question. Quit arguing with the witness.
 16 let her finish.
 17 Q. Let me ask you this.
 18 MR. CROSS: Let her finish the
 19 answer.
 20 A. In this situation --
 21 Q. Say whatever you want.
 22 A. In this situation, with the exposure that I
 23 had, I mean, you look at the entire
 24 situation, you don't --
 25 Q. I understand. You can only do what you can

Page 527

1 do and you can only do based on the
 2 information you have.
 3 But my question, Doctor, is, leave
 4 aside diagnosing and treating. I'm not
 5 suggesting to you that you didn't diagnose
 6 or treat this woman correctly. What I'm
 7 asking you is, when it comes time for you to
 8 do something you did not have to do to
 9 diagnose and treat her, and that is to tell
 10 somebody, including a jury, including a
 11 judge, or including a room full of lawyers
 12 what you think was the cause of this woman's
 13 disease, I want you to tell me how you ruled
 14 out the possibility that something other
 15 than environmental tobacco smoke might have
 16 caused her disease.
 17 Can you do that for us?
 18 A. I took what the most likely culprit was in
 19 this situation and diagnosed that.
 20 Q. And is it your opinion, Doctor, that the
 21 most likely cause of lung cancer in a woman
 22 who does not smoke, who is not living with a
 23 smoker, but who claims a prior exposure to
 24 environmental tobacco smoke, is that prior
 25 exposure to environmental tobacco smoke?

Page 528

1 A. Does she have an increased risk of lung
 2 cancer, yes.
 3 Q. The question is, is it the most likely cause
 4 of that disease in that individual?
 5 A. In this situation, secondary to
 6 environmental tobacco smoke, I think you
 7 have to consider that in your differential.
 8 Q. My question to you, Doctor, and they're your
 9 words, is it the most likely cause of lung
 10 cancer in an individual who is not a smoker,
 11 who does not live with a smoker, who claims
 12 a prior exposure to environmental tobacco
 13 smoke?
 14 A. You're asking, is -- ask the question again.
 15 You keep moving it around.
 16 Q. Well, Doctor, quite honestly, I'm using your
 17 words. Is exposure to environmental tobacco
 18 smoke the most likely cause of lung cancer
 19 in a nonsmoking woman who does not live with
 20 a smoker who claims a prior exposure to
 21 environmental tobacco smoke at work?
 22 A. Depends on the exposure and it depends on
 23 the type of cancer.
 24 MR. YOUNG: 5:00 buzzer.
 25 Q. And do the statistics --

Page 529

1 MR. YOUNG: They've been in here
2 twice. Bill.
3 MR. OHLEMEYER: Well, then we'll
4 just have to continue later.
5 (Discussion off the record.)
6 Q. Doctor, I'm still -- I understand that you
7 have an opinion about the cause of
8 Mrs. Wiley's cancer.
9 A. Yes.
10 Q. And we've asked you about when and how you
11 formed that opinion. But the question I
12 have is a little bit different and it
13 relates to how you ruled out other possible
14 causes of that cancer. And I want you to
15 describe for me the process by which you
16 ruled out the other possible causes of her
17 cancer.
18 A. By my history and by her clinical
19 presentation and by what she told me during
20 the time that she was with me and her
21 husband told me during the time that she was
22 a patient on that ward.
23 Q. So once you heard her history and once you
24 arrived at a diagnosis of her disease, you
25 had all the information you needed to reach

Page 530

1 a conclusion about the cause of her disease.
2 A. Once I had her history, talked to the
3 family, looked at her risk factors from the
4 history that was given to me, both in my H&P
5 as well as through the how many days I took
6 care of her, ruled out other -- I mean, as
7 far as a normal, I would like you to look at
8 number of -- I mean, it is not normal. I
9 mean, to ask about radon because, I mean,
10 that is somewhat reaching.
11 Q. How many doctors in 1991 do you think were
12 asking their patients whether they've been
13 exposed to environmental tobacco smoke?
14 A. I don't know. I can't tell you that.
15 Q. Do you think some doctors might have thought
16 that was reaching in 1991?
17 A. It depends on their educational level, it
18 depends on their interests, what kind of
19 experience they have.
20 Q. And their bias? And by bias --
21 A. It's not bias.
22 Q. Doctor, by bias I mean how they approach a
23 subject and how they analyze a subject?
24 A. Their bias.
25 Q. Some people have a, I mean -- well, strike

Page 531

1 that.
2 You said you looked at other risk
3 factors; what other risk factors did you
4 look at?
5 A. Whether she was a primary smoker.
6 Q. What else?
7 A. Well, her history in the fact that she did
8 not -- I mean, if she said that she had been
9 exposed to asbestos, I would have put that
10 in there.
11 Q. But we've already established, Doctor, that
12 you probably didn't ask her that question;
13 right?
14 A. From the -- I can tell you what's in the
15 history and if it's not in the history --
16 Q. If you had asked her that question, the
17 history would say denies exposure to
18 asbestos; right?
19 A. Yes.
20 Q. Okay. The history doesn't say denies
21 exposure to asbestos, the history doesn't
22 say denies exposure to radon, the history
23 doesn't say anything except denies --
24 A. Primary smoker.
25 Q. -- tobacco and alcohol; and exposed to

Page 532

1 environmental tobacco smoke.
2 A. Yes.
3 Q. So is that the extent to which you looked at
4 other risk factors?
5 A. During the time I took care of her, yes.
6 Q. So how did you rule out the possibility that
7 Mrs. Wiley was exposed to or in proximity to
8 a risk factor that she didn't tell you
9 about, either because of inadvertence,
10 ignorance, or some other reason?
11 A. How did I rule out other risk factors; is
12 that what you're asking?
13 Q. There came a point in time where you had to
14 sit down and say to yourself, I've diagnosed
15 this woman, I've done everything I can to
16 treat her --
17 A. Yes.
18 Q. -- and now I'm going to decide what caused
19 her disease.
20 A. I'm going to decide the most likely cause,
21 yes.
22 Q. And in doing so, my question to you is,
23 aside from the history you have in front of
24 us, what effort did you make to investigate
25 or rule out other potential causes of lung

Page 533

1 cancer in nonsmoking women?
 2 A. I mean --
 3 Q. Maybe -- are you telling me it's not that
 4 complicated? You've got a nonsmoking woman
 5 who's exposed to environmental tobacco
 6 smoke?
 7 A. I'm just telling you that when you take a
 8 history and you look at the most likely
 9 diagnosis, the fact when we did the biopsies
 10 and the biopsy -- the transthoracic biopsy,
 11 this was consistent with adenocarcinoma.
 12 Q. Let me stop you right there. Adenocarcinoma
 13 of the lung doesn't tell you that you're
 14 dealing with an adenocarcinoma caused by
 15 environmental tobacco smoke, does it?
 16 A. No.
 17 Q. The mere diagnosis doesn't suggest the
 18 etiology, does it?
 19 A. The diagnosis of adenocarcinoma,
 20 adenocarcinoma does occur in environmental
 21 tobacco smoke exposure.
 22 Q. A diagnosis of adenocarcinoma does not
 23 compel you to conclude that your patient
 24 suffers from a cancer caused by
 25 environmental tobacco smoke: right?

Page 534

1 A. Adenocarcinoma can occur in, and, in fact, I
 2 believe it's the highest type of cancer in
 3 environmental tobacco smoke. And the fact
 4 that this was an endobronchial lesion, the
 5 fact that this lady told me, and her husband
 6 told me throughout the stay or -- or several
 7 times through the stay that she had been
 8 exposed to environmental tobacco smoke, that
 9 she worked in a haze --
 10 Q. So that's my question, Doctor, is what more
 11 did you need to know beside the fact that
 12 you had a patient with adenocarcinoma of the
 13 lung, that you believed to have arisen in
 14 the bronchus, who claimed a history to
 15 exposure to environmental tobacco smoke to
 16 conclude that this was the cause of her
 17 cancer? I mean, is that all you needed to
 18 know?
 19 A. In my differential and from my examination
 20 of her and from all the information I had
 21 from the biopsies and everything, that was
 22 my diagnosis.
 23 Q. So you didn't look at any other risk factors
 24 except for primary smoking, alcohol, and
 25 environmental tobacco smoke.

Page 535

1 A. Well, the thing is, asbestos is usually --
 2 Q. Doctor, can you answer that question?
 3 A. I'm trying to explain it to you.
 4 MR. CROSS: She's trying to. Let
 5 her.
 6 A. I mean, you don't look at a patient and you
 7 split them up into little squares. What you
 8 look at is the H -- what you look at is the
 9 presentation. This was an endobronchial
 10 lesion. It was a central lesion. If this
 11 was asbestos, I would expect we would have
 12 had a -- you would have had calcification,
 13 we would have had a different presentation
 14 than what was presented.
 15 Q. Well, what is it about her presentation that
 16 led you to believe that the cause of her
 17 disease was environmental tobacco smoke?
 18 Presentation. Not history.
 19 A. She had a cough.
 20 Q. Let me stop you there.
 21 A. Yes.
 22 Q. Do individuals with coughs inevitably have
 23 cancer?
 24 A. Okay. Individuals with coughs inevitably
 25 have cancer. Well, there's lots and lots

Page 536

1 and lots of people with coughs.
 2 Q. I interrupted you, Doctor, go ahead, tell me
 3 what it is about Mrs. Wiley's presentation
 4 that led you to believe she had a cancer
 5 caused by exposure to environmental tobacco
 6 smoke.
 7 A. Her presentation was she had a lung mass.
 8 She had a cough. She had hemoptysis.
 9 Normally people do not have hemoptysis for
 10 several months unless there's some type of
 11 process occurring. That is a significant
 12 process. The fact that she had
 13 metastatic --
 14 Q. Does that process necessarily have to be
 15 cancer?
 16 A. Hemoptysis?
 17 Q. Can it be an infection?
 18 A. It could be an infection, AFB; Mycobacterium
 19 tuberculosis. It could have been that, yes.
 20 You're asking about hemoptysis and a cough.
 21 in a patient with weight loss, that
 22 presentation could be consistent with
 23 tuberculosis.
 24 Q. But here's my point. If I walk down to one
 25 of your partner's offices and they got a

Page 537

1 chest x-ray on the thing, and they say I got
 2 a patient with an abnormal chest x-ray,
 3 hemoptysis and a cough, you don't say
 4 environmental tobacco smoke lung cancer. do
 5 you?
 6 A.No.
 7 Q.Because you need more information; right?
 8 A.I would say risk of lung cancer. Or --
 9 Q.Caused -- you don't say risk of lung cancer
 10 caused by environmental tobacco smoke, do
 11 you?
 12 A.No.
 13 Q.You need more information.
 14 A.From that information that you gave me.
 15 Q.So my question to you, Doctor, is really
 16 simple: What information did you assemble
 17 or collect about Mrs. Wiley's exposure to
 18 other substances that can cause lung cancer
 19 before you reached the conclusion that she
 20 had an adenocarcinoma of the lung secondary
 21 to secondhand smoke?
 22 A.Again, which is what I've explained before,
 23 has to do with the presentation. Asbestos,
 24 there was no evidence of calcification
 25 peripherally. The presentation was not the

Page 538

1 same. If she had had calcification in her
 2 chest x-ray, or in the CT scan, we would
 3 have said -- we would have come back to her
 4 and said, "Have you had exposure to
 5 asbestos? We see calcification here." But
 6 that's not what happened.
 7 Q.Well, what do you see in a lung cancer that
 8 might be caused by exposure to radon that
 9 makes it different looking than a lung
 10 cancer that might be caused by exposure to
 11 tobacco smoke or environmental tobacco smoke
 12 or polyvinyl chloride or formaldehyde or
 13 benzene or arsenic?
 14 A.Okay, now, your question was, what's the
 15 difference from --
 16 Q.Well, you're telling me lung cancer that you
 17 associate with an exposure to asbestos
 18 presents differently because it demonstrates
 19 objective findings that you associate with a
 20 prior exposure to asbestos; right?
 21 A.Yes.
 22 Q.Same questions about other suspected
 23 carcinogens. What is it about the
 24 presentation of a cancer in an individual
 25 who has a lung cancer that indicates to you

Page 539

1 it was caused by exposure to tobacco smoke
 2 as opposed to environmental tobacco smoke as
 3 opposed to formaldehyde as opposed to
 4 arsenic as opposed to radon?
 5 A.Where were you going to pick up a high
 6 enough level of formaldehyde and arsenic to
 7 cause, I mean, except in environmental
 8 tobacco smoke. I mean, you're kind of
 9 putting those in different sections here.
 10 Q.Well, where, Doctor, are you going to look
 11 at somebody's presentation and determine how
 12 much environmental tobacco smoke they were
 13 exposed to?
 14 A.Has to do with their history.
 15 Q.History. Because you can look at somebody's
 16 presentation with asbestos and make some
 17 reasonably certain conclusions about their
 18 level of exposure based on their objective
 19 findings; right?
 20 A.Not really.
 21 Q.Well, let's talk about asbestosis. People
 22 don't develop asbestosis living in a house
 23 with asbestos pipes; right?
 24 A.They do or do not?
 25 Q.Do not.

Page 540

1 A.It has to do with whether they're exposed to
 2 it.
 3 Q.And people who develop asbestosis --
 4 A.Because asbestos particles --
 5 Q.You've got to let me finish.
 6 When you look at an x-ray and you see
 7 asbestosis, or you see radiological and
 8 pathological findings that allow you to
 9 diagnose asbestosis, you know something
 10 about the level of exposure to asbestos that
 11 individual encountered, don't you?
 12 A.I can't tell you about the level of
 13 exposure.
 14 Q.You know it was occupational.
 15 A.Doesn't always have to be. It can occur in
 16 their house, it can occur in their schools.
 17 But the level -- I mean, the fact that
 18 asbestosis, I mean -- well, doesn't matter.
 19 Go ahead.
 20 Q.The fact of the matter is, Doctor, you can't
 21 look at Mrs. Wiley's lung cancer without the
 22 history and say this is a lung cancer caused
 23 by exposure to environmental tobacco smoke;
 24 right?
 25 A.The one reason -- a major reason that was

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 541

1 done is because of its location, because --
 2 Q. Doctor, let me ask the question again, I
 3 don't mean to interrupt you.
 4 MR. CROSS: Then don't.
 5 Q. Without knowing the history, you can't look
 6 at the lung cancer and say this is a lung
 7 cancer caused by exposure to environmental
 8 tobacco smoke; right?
 9 A. Without knowing the history, I cannot say
 10 that that endobronchial lesion was not
 11 related? Is that what you're asking?
 12 Q. No. Was caused by exposure to environmental
 13 tobacco smoke.
 14 A. Well, looking at -- adenocarcinoma is
 15 usually a peripheral presentation. It does
 16 not occur very frequently in the airway.
 17 The air- -- I mean, it's usually a mounding
 18 up. It's usually a peripheral lesion. I
 19 mean --
 20 Q. What's the route of exposure to radon?
 21 A. Inhalation.
 22 Q. So --
 23 A. Well --
 24 Q. Tell me how you look at a lung cancer in
 25 somebody.

Page 542

1 A. It's radioactive. Essentially exposure.
 2 Q. Tell me how you look at a lung cancer
 3 without a history and tell me it was caused
 4 by exposure to radon.
 5 A. Tell me how -- do it again.
 6 Q. My question to you, Doctor, is can you look
 7 at a lung cancer without knowing a person's
 8 history and determine what its cause was
 9 absent some sort of pathological
 10 manifestation of a prior exposure to the
 11 substance like you have with asbestos;
 12 plaques, scarring, fibrosis, those kinds of
 13 things.
 14 A. Was it an endobronchial lesion? Was it a
 15 peripheral? Is that what you're asking?
 16 Q. Let's put it this way, Doctor: Dr. Kocoshis
 17 looked at this lung cancer under a
 18 microscope; right?
 19 A. Yes.
 20 Q. He didn't say it was caused by exposure to
 21 environmental tobacco smoke based on his
 22 observation of the tumor; right?
 23 A. He did not say that.
 24 Q. You have concluded that this was a tumor
 25 caused by exposure to environmental tobacco

Page 543

1 smoke; right?
 2 A. Yes.
 3 Q. And you've done that based on the history
 4 you took from Mrs. Wiley.
 5 A. And the presentation.
 6 Q. If you didn't have the history, you couldn't
 7 come to the same conclusion, could you?
 8 A. Well, you'd have to explain an endobronchial
 9 lesion that had been going on that was an
 10 adenocarcinoma.
 11 Q. And now we're right back to my question.
 12 How did you assure yourself that something
 13 other than environmental tobacco smoke
 14 didn't cause Mrs. Wiley's cancer?
 15 A. You're asking me to diagnose something --
 16 you're asking me to --
 17 Q. Rule out other potential causes of
 18 Mrs. Wiley's cancer.
 19 A. Even though -- even though it's -- even
 20 though the most likely cause, and the most
 21 likely exposure is there and that's the
 22 history they gave you. What you're asking
 23 me to do is change her history.
 24 Q. What I'm asking you to do, Doctor, is to
 25 tell me, first of all, the only exposure

Page 544

1 they gave you was environmental tobacco
 2 smoke; right?
 3 A. They told me they were exposed to
 4 environmental tobacco smoke, yes.
 5 Q. And we've already established that the
 6 statistics necessarily don't suggest that is
 7 the most likely cause of her cancer; right?
 8 A. They're about equal, 4,000 and -- in
 9 nonsmokers.
 10 Q. Trust me, we'll get the statistics out and
 11 we'll let the jury decide whether they're
 12 equal or not.
 13 But my question to you is --
 14 A. And again, it's in --
 15 Q. -- is how --
 16 A. And again, it's in nonsmokers.
 17 Q. How did you go about ruling out other
 18 potential causes of the disease?
 19 A. If you're asking if she was exposed to
 20 radon, I did not ask that. At least it's
 21 not documented here.
 22 Q. So let's start right there. How did you
 23 rule out the possibility that radon might
 24 have caused her cancer?
 25 A. How did I rule that out?

Page 545	Page 547
<p>1 Q.Exactly.</p> <p>2 A.I did not ask but that doesn't mean -- I</p> <p>3 mean, the point is, is that her presentation</p> <p>4 was such, I mean, if -- if somebody comes to</p> <p>5 you and is drinking a 12-pack a day of beer,</p> <p>6 you don't say, Well, this patient -- I mean,</p> <p>7 you look at what's the most --</p> <p>8 Q.What if somebody comes to you, Doctor, and</p> <p>9 says I live in a house where we've</p> <p>10 demonstrated the presence of radon above the</p> <p>11 level that the EPA says should require some</p> <p>12 action on my part to abate that radon.</p> <p>13 A.Yes.</p> <p>14 Q.Would that be something you'd want to</p> <p>15 consider in determining whether or if radon</p> <p>16 played a role in causing that cancer?</p> <p>17 A.Yes.</p> <p>18 Q.All right. My question to you is, how did</p> <p>19 you go about assuring yourself that that</p> <p>20 type of information for radon or other</p> <p>21 carcinogens didn't exist with respect to</p> <p>22 Mrs. Wiley?</p> <p>23 A.If I did not ask her about radon, it's not</p> <p>24 here.</p> <p>25 Q.Or anything else.</p>	<p>1 tell me the process by which you -- here's</p> <p>2 what I want to do. I want to critically</p> <p>3 analyze your opinion.</p> <p>4 A. Yes.</p> <p>5 Q.And to do that I want to know how you</p> <p>6 arrived at your opinion. And I want to know</p> <p>7 whether or if you considered and ruled out</p> <p>8 Mrs. Wiley's potential exposure to other</p> <p>9 carcinogens. I mean, it's not really as</p> <p>10 adversarial as it sounds. That's exactly.</p> <p>11 you know, what I'm trying to do.</p> <p>12 A. What I did is I took a history and her</p> <p>13 history was such that she had been heavy</p> <p>14 exposure to secondhand smoke, okay? She was</p> <p>15 not a primary smoker. I diagnosed when I</p> <p>16 did the bronchoscope --</p> <p>17 It's not like you set it up so that I</p> <p>18 am out there looking for a case such as</p> <p>19 this. The only -- the only diagnosis that</p> <p>20 would fit, in this situation, from all the</p> <p>21 history that I had, including an</p> <p>22 endobronchial lesion, including the</p> <p>23 presentation, including all the things that</p> <p>24 I had, was related to environmental tobacco</p> <p>25 smoke. And I'm sorry --</p>
Page 546	Page 548
<p>1 A.What else is there?</p> <p>2 Q.Well, there are other things that are</p> <p>3 suspected of causing lung cancer in</p> <p>4 individuals besides radon, asbestos, and</p> <p>5 tobacco smoke: right?</p> <p>6 A.But they're very, very rare.</p> <p>7 Q.Well, what effort did you make to determine</p> <p>8 whether or if Mrs. Wiley was exposed to any</p> <p>9 of those things?</p> <p>10 A.So you're saying that I should ask her about</p> <p>11 vinyl chloride and --</p> <p>12 Q.Doctor, here's what I'm saying to you, if</p> <p>13 you're going to come to court and offer an</p> <p>14 opinion --</p> <p>15 A. Yes.</p> <p>16 Q.-- about the cause of this woman's</p> <p>17 disease --</p> <p>18 A. Yes.</p> <p>19 Q.-- which is an opinion that you've agreed</p> <p>20 with me was not necessary to your diagnosis</p> <p>21 or treatment of her, I want to know the</p> <p>22 process --</p> <p>23 A. Wait a minute. Wait a minute. Rephrase</p> <p>24 this.</p> <p>25 Q. Let me rephrase the question. I want you to</p>	<p>1 Q.Well, let's put it this way. I think we</p> <p>2 understand each other. This is not what you</p> <p>3 do every day at the hospital; right?</p> <p>4 A. These depositions?</p> <p>5 Q.No.</p> <p>6 A.No.</p> <p>7 Q.Trying to determine, you know, trying to</p> <p>8 engage in an exercise to determine what</p> <p>9 might have caused somebody's death who died</p> <p>10 six years ago; right?</p> <p>11 A.Okay. You're asking -- okay. The patient</p> <p>12 died six years ago and now I'm trying to</p> <p>13 decide?</p> <p>14 Q.Dr. Turner, you understand why we're here;</p> <p>15 right?</p> <p>16 A. Yes.</p> <p>17 Q.Why we're here is because Mr. Wiley, as is</p> <p>18 his right, is going to ask a jury to</p> <p>19 determine whether environmental tobacco</p> <p>20 smoke caused his wife's disease.</p> <p>21 A. Yes.</p> <p>22 Q. You understand that.</p> <p>23 A. Yes.</p> <p>24 Q. And you understand that you were involved in</p> <p>25 that exercise not because it has any effect</p>

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 549

1 on Mrs. Wiley's diagnosis or treatment;
 2 right? Because, unfortunately, Mrs. Wiley
 3 is dead.
 4 A. It has to do with diagnosis, not treatment.
 5 Q. I understand. The issues involved have to
 6 do with the diagnosis. But your opinion
 7 about the cause of Mrs. Wiley's death --
 8 A. Yes.
 9 Q. -- is not an opinion you have come to or
 10 necessarily needed to come to in connection
 11 with your treatment of her while she was
 12 alive.
 13 MR. CROSS: Asked and answered at
 14 least ten times today.
 15 A. Okay.
 16 Q. Do you understand what I'm saying? The
 17 process?
 18 A. You're asking me whether my diagnosis and
 19 the cause, cause of that diagnosis would
 20 have made any difference whether she died or
 21 not. That's what you're asking; is that
 22 correct?
 23 Q. You didn't need to determine what caused
 24 Mrs. Wiley's disease before she died.
 25 A. Did I need to determine that. No.

Page 550

1 Q. It wouldn't have prolonged her life.
 2 A. No.
 3 Q. We're now engaged in an exercise by which
 4 we, you, the lawyers and a jury, are going
 5 to be asked to try to make that
 6 determination. And what I want to know is,
 7 when you got involved in that process, and
 8 you had to say to yourself, here are the
 9 things that could have caused it, here's
 10 what I think is the most likely cause of it,
 11 how did you go about assuring yourself that
 12 Mrs. Wiley wasn't exposed to something other
 13 than environmental tobacco smoke that might
 14 have caused her lung cancer?
 15 A. Because when I was talking to her, that is
 16 the only -- and from my history, as well as
 17 from other things that came to me, that they
 18 told me during the time that she was on that
 19 ward -- and I remember talking to the
 20 husband during that time. My God, she was
 21 dying, okay? Or she was extremely ill. And
 22 I talked to the family members, and I asked,
 23 because we had -- I mean, it was, the fact
 24 that she presented one way, they had treated
 25 her one way, she comes to us, we have to

Page 551

1 find the diagnosis. And from all of that
 2 information, I put that down.
 3 Now, I would not have put secondary to
 4 environmental tobacco smoke unless I truly
 5 believed that was the diagnosis.
 6 Q. I'm not saying that you don't truthfully
 7 believe that. What I want to know, Doctor,
 8 is how you went about determining whether
 9 there might have been something else that
 10 caused it. Or are you telling me that it's
 11 a nonsensical question because you didn't --
 12 you didn't need to consider anything else?
 13 A. No, that's not what I'm saying. I'm saying
 14 from all the information that was given to
 15 me at that time I made that diagnosis.
 16 It's like if somebody has an abdominal
 17 aortic aneurysm and ruptures, or has severe
 18 peripheral vascular disease and loses a
 19 limb, on my history it says I smoke two
 20 packs of cigarettes a day or I have
 21 diabetes, all of that information is put
 22 there and I'll put on the death certificate
 23 and I'll put on the death summary that this
 24 patient had a ruptured abdominal aneurysm
 25 from this cause.

Page 552

1 Q. But my question to you, Doctor, is how did
 2 you go about investigating whether the
 3 information that was available to you was
 4 complete and was accurate or contained a
 5 sufficient amount of information about other
 6 things she might have been exposed to that
 7 could have caused the cancer?
 8 A. I discussed it with her husband, I discussed
 9 it with her, and it's right here. Now, I'm
 10 not a private investigator.
 11 Q. Here?
 12 A. In the H&P.
 13 Q. Exhibit 14.
 14 A. I am not a private investigator, I did not
 15 check on the truthfulness of what they gave
 16 me. When somebody comes to me and I'm
 17 discussing things and we're going through
 18 the differential diagnosis, you know, these
 19 are intelligent people.
 20 Q. Well, you wouldn't disagree with me, would
 21 you, Doctor, that there are facts that could
 22 be proved or brought to your attention about
 23 Mrs. Wiley that might have an effect on your
 24 opinion about the cause of her disease.
 25 A. You say there are facts.

Page 553

Page 555

1 Q. Well, are you telling me that there's --
 2 A. I don't know. I don't know. You'll have to
 3 bring it to me.
 4 Q. Well, how about facts about the duration or
 5 the intensity of her exposure?
 6 A. If you bring that to me.
 7 Q. Could they have an effect on your opinion?
 8 A. The intensity or duration to the exposure to
 9 environmental tobacco smoke.
 10 Q. Sure.
 11 A. You're asking the same question in a
 12 different way. You're looking at level of
 13 exposure. There's no safe exposure level
 14 for environmental tobacco smoke. Right?
 15 Q. Well, that's what you're telling me, Doctor.
 16 So what you're telling me is you don't need
 17 to know -- that nothing I could tell you
 18 about the duration or the intensity or the
 19 frequency or the efforts Mrs. Wiley made to
 20 avoid exposure to environmental tobacco
 21 smoke would change your opinion about the
 22 cause of her lung cancer?
 23 A. I'm saying from the history that I got, from
 24 her, that's my diagnosis.
 25 Q. I understand what you're saying, Doctor.

Page 554

1 Can you answer the question I asked you?
 2 A. You're asking me, if you ask -- if you give
 3 me additional information of exposure and
 4 duration, would that make a difference. I
 5 don't know. I'd have to hear the
 6 information. And I would have, you know, we
 7 would -- we would have to look at all of the
 8 information.
 9 Q. What about if I gave you information about
 10 Mrs. Wiley's exposure to other class A or
 11 group A carcinogens? Would that have an
 12 effect on your opinion about the cause of
 13 her disease?
 14 A. You'd have to look at the exposure and
 15 whether there's other factors involved.
 16 Q. And am I correct, though, that that
 17 exercise, developing those facts, looking at
 18 those facts, comparing them to the medical
 19 or scientific literature is not an exercise
 20 that you've engaged in as it relates to
 21 anything except environmental tobacco smoke
 22 as it relates to Mrs. Wiley.
 23 A. I don't think that's true. I looked at the
 24 history, and, I mean, looking --
 25 Q. The history being what you've described --

1 A. H&P, as well as whatever --
 2 Q. -- as Exhibit 14.
 3 A. 14. And what they told me during my --
 4 during the hospital time. And when we
 5 decided -- and when I was called for this
 6 case to verify whether this is, indeed, if I
 7 was still standing by my diagnosis, and
 8 whether there was independent observers
 9 looking at all the facts, I mean, even
 10 looking at the slides and having the
 11 pathologist look, that diagnosis, there was
 12 no other conclusion that we could come to.
 13 Q. And that verification didn't occur in
 14 connection with any quality control program
 15 at the hospital; right? It occurred in
 16 connection --
 17 A. Not that I'm aware of.
 18 Q. It occurred in connection with a lawsuit or
 19 a claim made by Mr. Wiley about the cause of
 20 his wife's cancer.
 21 A. It came after I was requested to look at the
 22 case and to see if it would still be
 23 consistent with that. And I believe it was.
 24 And the other individuals that looked at the
 25 case, looked at all the data, agreed with

Page 556

1 that.
 2 Q. And you don't know whether those individuals
 3 got all the data, do you, about her exposure
 4 to other potential carcinogens?
 5 A. I can't tell you that. You'll have to ask
 6 them.
 7 MR. OHLEMEYER: Let me pass the
 8 witness and take a look at my notes.
 9 MR. CROSS: Let's take a few
 10 minutes off the record.
 11 (A recess was taken.)
 12 DIRECT EXAMINATION CONTINUING
 13 BY MR. FURR:
 14 Q. Dr. Turner, my name is Jeff Furr, I'm going
 15 to ask a few questions, I'll be as brief as
 16 I can so you get done tonight.
 17 Let's start with, are you familiar with
 18 how many new cases of lung cancer in
 19 nonsmokers occur annually in this country?
 20 A. I believe it's approximately 3,000. Are you
 21 talking about nonsmokers?
 22 Q. New cases of lung cancer in nonsmokers in
 23 the U.S. population on an annual basis.
 24 A. That are exposed to secondhand smoke, no.
 25 Q. No, just exactly the question I asked.

Page 553 - Page 556

STEWART-RICHARDSON & ASSOCIATES
COURT REPORTERS (317) 237-3773

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 557

1 Total.
 2 A. I do not know the exact number, no.
 3 Q. If Dr. Burns testified that that number is
 4 somewhere between 15- and 20,000, would you
 5 have any reason to disagree with that?
 6 A. If Dr. Burns stated that, that's his
 7 statement.
 8 Q. And my question is, would you have any
 9 reason to disagree with that?
 10 A. If that is, indeed, his statement, then -- I
 11 mean, you know, if that's what you're
 12 saying, if, you know, Dr. Burns was sitting
 13 here and he stated that I would believe him
 14 if that was his statement. I mean from his
 15 knowledge.
 16 Q. But you simply aren't familiar with those
 17 statistics, I take it.
 18 A. No.
 19 Q. What are the causes of lung cancer among
 20 nonsmokers?
 21 A. It can have to do with secondhand smoke, it
 22 can have to do with, as this gentleman
 23 stated, radon. It could have to do with
 24 some other type of -- I mean, there's --
 25 those are the primary causes. There may be

Page 558

1 other environmental.
 2 Q. And when you say "other environmental" can
 3 you be any more specific?
 4 A. No.
 5 Q. You can't. A number of times today you said
 6 you thought there were 4,000 annual cases of
 7 lung cancer among nonsmokers attributable to
 8 environmental tobacco smoke; is that right?
 9 A. That is the statistics.
 10 Q. Where do you get that statistic from?
 11 A. From the Environmental Protection Agency.
 12 Q. Are you sure it's not 3,000?
 13 A. No, I believe it's 3- to 4,000.
 14 Q. Okay. When is the last time you looked at
 15 that?
 16 A. At noon.
 17 Q. And how many cases -- you said there were
 18 about 4,000 cases of radon-induced lung
 19 cancer in nonsmokers each year; right?
 20 A. Yes.
 21 Q. But you don't know, besides those cases that
 22 you would attribute to either environmental
 23 tobacco smoke or radon, you don't know the
 24 number of lung, additional lung cancer cases
 25 that occur annually in the U.S. in

Page 559

1 nonsmokers; is that right?
 2 A. I don't know the exact numbers.
 3 Q. Do you have an estimation?
 4 A. No.
 5 Q. As I've listened to your testimony, you seem
 6 to be attaching some special significance to
 7 your opinion that Mrs. Wiley had an
 8 endobronchial adenocarcinoma as opposed to
 9 an adenocarcinoma in the periphery of her
 10 lung; is that correct?
 11 A. There is some -- is that what you're asking,
 12 is there some significance, the fact that it
 13 was an endobronchial lesion versus a
 14 peripheral lesion?
 15 Q. In your opinion, yes.
 16 A. Yes.
 17 Q. Why is that?
 18 A. I thought it was very odd that a patient
 19 that would have an endobronchial lesion,
 20 that was that apparent, it was not a
 21 mounding, it was a definite endobronchial
 22 lesion that was obstructing that bronchus
 23 intermedius.
 24 Q. But why, what significance does that finding
 25 have for the etiology of that tumor?

Page 560

1 A. That may indicate, and I felt that it
 2 indicated, with the history that she had of
 3 environmental tobacco smoke, that -- and as
 4 you can note on my bronchoscopy note, on one
 5 of them, I believe it was on the 6th,
 6 that -- no, it was on the -- yes, I believe
 7 the 6th, that my concern was squamous cell
 8 carcinoma because of the presentation.
 9 Q. But my question goes to the etiology and
 10 what the significance of the tumor in your
 11 opinion was with respect to the etiology.
 12 A. The tumor, the presentation? The fact that
 13 it was an endobronchial lesion, the fact
 14 that, with her history that I obtained when
 15 she was admitted, that that was, again, I
 16 felt very strongly that it was -- that would
 17 increase the chance, certainly, and
 18 diagnostic of an endobronchial lesion
 19 related to environmental tobacco smoke.
 20 Q. What scientific data are you aware of that
 21 suggests that tumors in the endobronchus are
 22 more related to environmental tobacco smoke
 23 than, say, adenocarcinomas in the periphery
 24 of the lung?
 25 A. I can't tell you that. The fact that I do

Page 561

1 know that -- I can't tell you that. You
2 mean will environmental tobacco smoke more
3 likely be endobronchial versus peripheral;
4 is that what your question is?

5 Q.No. I understand that, you keep using the
6 word feel, that you feel that the fact that
7 in your opinion the tumor was in the
8 endobronchus has some significance for the
9 etiology.

10 A.I felt that with her history of being heavy
11 exposure and, as they told me, when the
12 husband was telling me that she was working
13 in a haze most of the time, that it
14 increased strongly my suspicions that this
15 was related to environmental tobacco smoke.

16 Q.Doctor, I'm not going to interrupt you. You
17 can keep answering that way as long as you
18 want to, but I will keep asking questions.
19 I mean, I don't know quite how to convey to
20 you what I'm asking.

21 I'm not asking about any factor other
22 than the location of the tumor in her lung.
23 in your opinion, the fact that it was in the
24 endobronchus versus the periphery: I'm not
25 asking you about what you think how much

Page 562

1 Q.Almost. Not the reason. Is it a reason
2 that you called it as related to
3 environmental tobacco smoke.

4 A.Is it a reason. I would suspect, from the
5 presentation of that patient, it would go
6 along with the diagnosis of inhaled, some
7 type of inhaled toxin.

8 Q.Okay. And my next question was, could you
9 point me to any scientific literature that
10 suggests that inhaling environmental tobacco
11 smoke is associated with adenocarcinomas in
12 the bronchus.

13 A.I can't pull them directly towards you. I
14 do know that adenocarcinoma is the -- I
15 mean, if you look at all the differentials
16 of lung cancers related to environmental
17 tobacco smoke, I believe the prominent one
18 is adenocarcinoma.

19 Now, from what I've read, I do not
20 believe that they define, I mean, where the
21 most likely -- or where they are most likely
22 found.

23 Q.I think you're right, and so what I'm trying
24 to understand is, every time Mr. Ohlemeyer
25 has asked you to explain the basis for your

Page 562

1 smoke she was exposed to, or how hazy you
2 think her work environment was.

3 I'm asking you, because I haven't
4 understood this yet, do you attach
5 significance with respect to the etiology of
6 the tumor to the location of the tumor in
7 the endobronchus?

8 A.You're asking can environmental tobacco
9 smoke cause a peripheral lesion. Is that
10 what you're asking?

11 Q.No. I'm asking exactly the question.

12 MR. FURR: Would you please read my
13 question back.

14 (The requested material was read back
15 by the reporter.)

16 Q.You want me to try again, Doctor? You
17 think --

18 A.No. The answer is, is that I was not
19 suspecting, until I looked down there, that
20 this patient had an endobronchial lesion.

21 The answer to your question is, is
22 that -- is the fact that she had an
23 endobronchial lesion the reason I called it
24 environmental tobacco smoke? No. The
25 reason -- am I not answering your question?

Page 564

1 determination that the tumor was
2 attributable to her tobacco smoke exposure,
3 you've listed a number of factors for him,
4 and I appreciate that you look at it all in
5 the totality in your opinion. I'm trying to
6 break them out one at a time to see which
7 ones mean what to you.

8 And as I understand what you're saying
9 now, when you're describing it as an
10 endobronchial lesion, you're simply
11 describing the location of the tumor and
12 you're not attaching any etiologic
13 significance to the fact that that's where
14 you believe it originated; is that correct?

15 A.I'm not attaching any etiological
16 significance to that's where it originated;
17 is that the question?

18 Q.Yes.

19 A.Not attaching any etiological relationship
20 that's where it originated.

21 Well, if a tumor is sitting in the
22 airway, and the lady had a right middle lobe
23 syndrome, which is in the history,
24 therefore, she had partial collapse of her
25 right middle lobe, then, I mean, the chances

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 565

1 are -- I mean, it would seem to me. I would
 2 surmise, that most likely that probably
 3 originated there or close to there, yes.
 4 Q. Let me try to get at it another way.
 5 If you had formed the opinion that her
 6 adenocarcinoma had originated in the
 7 periphery of the lung, would that have made
 8 you any more or less likely to attribute it
 9 to environmental tobacco smoke exposure?
 10 A. I would still attribute it to environmental
 11 tobacco smoke because of her history.
 12 Q. Okay, that's what I wanted to know.
 13 Dr. Turner, again, as I've listened to
 14 your testimony over the past day, you don't
 15 really consider yourself to be an expert on
 16 environmental tobacco smoke, do you?
 17 A. I have read a number of articles, I
 18 correlate those with my patients, and I've
 19 tried to be as familiar as I can with the
 20 articles that are out there.
 21 Am I an expert? Am I a research
 22 scientist? I'm not a research scientist.
 23 I'm a clinician. I treat patients at the
 24 bedside. I help make the diagnoses. I try
 25 to get them treatment. I try to save their

Page 566

1 lives. Or at least palliate them.
 2 Q. Okay. That's fair.
 3 These articles that you've read on
 4 environmental tobacco smoke, what topics
 5 have they addressed?
 6 A. They have to do with asthma; it has to do
 7 with childhood illnesses; it has to do with
 8 heart attacks; it has to do with heart
 9 disease; it has to do with cancer.
 10 Q. Okay. Let me ask it a different way. What
 11 scientific disciplines have these articles
 12 that you read dealt with? And what I mean
 13 by that, were they epidemiologic articles or
 14 toxicology articles or chemistry or exposure
 15 or some combination of all of that?
 16 A. Toxicology, scientific, clinical
 17 presentation. I mean, probably kind of
 18 across the gamut.
 19 Q. Okay.
 20 A. I mean, I have to look at the article and
 21 then -- I'm trying to answer your questions.
 22 I'd have to look at each article and say,
 23 well, this deals more with toxicology, this
 24 deals more with clinical presentation, these
 25 are studies.

Page 567

1 Q. Okay. Let's talk about these scientific
 2 disciplines and the articles from those
 3 disciplines related to ETS one at a time.
 4 Let's start with epidemiology.
 5 You've told us you're not an
 6 epidemiologist; is that correct?
 7 A. That's correct.
 8 Q. Have you actually systematically identified,
 9 retrieved, and reviewed the epidemiologic
 10 studies of lung cancer in nonsmokers, the
 11 original epidemiologic studies versus review
 12 articles written by others?
 13 A. Well, given the fact I've reviewed a number
 14 of articles, I have most likely read some of
 15 the original articles, such as 1981. I have
 16 read some of the most recent articles. You
 17 know, without them in front of me --
 18 Q. Well, but I'm not asking you about specific
 19 ones yet. I'm asking you whether you've
 20 actually taken the step of rigorously
 21 reviewing all of the literature that you
 22 could identify. Have you taken a step of
 23 saying I want to know what the totality of
 24 the epidemiologic evidence looks like for
 25 myself, and gone out and found all those

Page 568

1 articles and reviewed them using standard
 2 epidemiologic criteria?
 3 A. I've looked at epidemiologic studies and
 4 tried to look at what the preponderance of
 5 evidence was, what those epidemiologic
 6 studies show.
 7 Q. And did you do that by retrieving the
 8 original epidemiologic articles?
 9 A. The original epidemiological articles.
 10 You're talking about the ones that are
 11 published?
 12 Q. Yeah. I really, I'm at a loss. I don't
 13 think this is -- I'm making this a lot
 14 harder than it should be.
 15 I want to know whether you've -- does
 16 the term "original" article have a meaning,
 17 any meaning to you?
 18 A. You're talking about the one -- the article
 19 that was published at the time the data came
 20 out.
 21 Q. As opposed to a review article, for
 22 instance. Is that a distinction that you
 23 can draw in your mind?
 24 A. A review article means to me that someone
 25 was reviewing that article as well as

Page 569

1 possibly comparing it to other articles.
 2 Q. Right.
 3 A. The original epidemiologic studies, they did
 4 the study themselves, those authors
 5 conducted a study themselves.
 6 Q. That's exactly what I mean when I use those
 7 terms.
 8 And my question is, have you gone out
 9 and obtained and reviewed the original
 10 epidemiologic studies of lung cancer in
 11 nonsmokers?
 12 A. I have reviewed, again, my memory, I have
 13 reviewed epidemiological studies that were
 14 conducted by the researchers.
 15 Q. Okay. But did you -- it's obvious that your
 16 testimony is that you've reviewed some of
 17 them. Have you attempted, in some
 18 systematic scientific fashion, to determine
 19 whether or not you reviewed them all so that
 20 you would know what the total epidemiologic
 21 evidence looks like?
 22 A. Well, let me tell you, I have reviewed as
 23 many articles as I can find over the last --
 24 since 1984, and probably before that.
 25 Now --

Page 570

1 Q. Are you fairly familiar with those studies
 2 then?
 3 A. Well, there's been a number of articles with
 4 a number of authors and I don't have them in
 5 front of me, but I have read -- now, it
 6 doesn't mean that I've read them in the last
 7 one week, but I have read a number of
 8 articles over the last -- since 1984, or
 9 before, having to do with these subjects,
 10 primary or secondary smoke.
 11 Q. What I'm trying to understand is how
 12 familiar you are with those articles and the
 13 data reported in those articles as you sit
 14 here today.
 15 How many of those articles -- can you
 16 even name for me the first investigator, for
 17 instance?
 18 A. I think it's an unfair question. I mean,
 19 with all the literature that's out there, I
 20 think that's an unfair question.
 21 Q. Well, go ahead and answer it anyway.
 22 A. I don't have an answer for you. I think
 23 it's an unfair question. I mean, there's a
 24 number of articles with a number of authors.
 25 And the point is, what you're asking me is,

Page 571

1 if I can't remember the author, then I
 2 haven't reviewed the literature. And that's
 3 essentially what you're insinuating and
 4 that's not what --
 5 Q. We can all draw what inferences we want to.
 6 I'm just asking you whether you can do it or
 7 not.
 8 A. Well, so what you're saying, if I can't
 9 remember the author, then, obviously, I
 10 don't know what that article stated.
 11 Q. Can you --
 12 A. Is that right?
 13 Q. No. And I'm not here to answer your
 14 questions today, frankly, I'd like for you
 15 to answer mine. Unless it deals with a
 16 clarification of my question, I'll be glad
 17 to try to help you out.
 18 A. Okay. If you would like me to go get the
 19 articles I can sit here and I can look at
 20 the author and I could, you know, summarize
 21 those articles for you.
 22 Q. As you sit here now how many of them can you
 23 name for me?
 24 A. Well, there's the gentleman in 1981.
 25 Q. Now you're looking at your notes --

Page 572

1 A. Hirayama.
 2 Q. -- that you gave us today.
 3 A. Yes. Yes. And Trichopoulos.
 4 Q. Hirayama and Trichopoulos.
 5 A. Yes.
 6 Q. Any others?
 7 A. I believe Glantz did some. I mean, there's
 8 a number of articles that have been done.
 9 U.S. Surgeons General has a number of
 10 bibliography -- a series of bibliography
 11 articles that can be quoted. But just
 12 because I don't know the author doesn't mean
 13 that I have not reviewed that information.
 14 Q. Okay. Let me ask you about Glantz. A
 15 number of times today you have cited Stanley
 16 Glantz as a source of information that you
 17 relied upon; is that correct?
 18 A. A few times today.
 19 Q. Who is Stan Glantz?
 20 A. He's a professor I believe at the University
 21 of Southern California.
 22 Q. Is he a medical doctor?
 23 A. I believe he's a Ph.D.
 24 Q. In what --
 25 A. I might be mistaken.

1 Q. -- do you know?
2 A. I don't know his exact Ph.D. I believe it's
3 in biochemistry. I believe it's in
4 biochemistry, but I'm not -- I can't tell
5 you for sure.
6 Q. Go back to the literature on environmental
7 tobacco smoke. Have you ever attempted to
8 systematically identify, retrieve, and
9 review the toxicology studies of
10 environmental tobacco smoke that are
11 relevant to lung cancer risk?
12 A. I've reviewed some literature on that
13 subject, yes.
14 Q. What have you reviewed?
15 A. Well, there was articles that were brought
16 out by the U.S. Surgeons General in their
17 reports. I believe in 1984, if I'm not
18 mistaken. And there was some other
19 information. I believe it was from Stan
20 Glantz. I think he -- I was looking into
21 this subject and I talked to him, I talked
22 to Dr. Glantz, and I believe he sent me some
23 articles. So is that what you're asking?
24 Q. Well, no, I probably didn't ask you
25 specifically enough. What I meant is, have

1 you ever gone out and gotten the primary
2 literature from the toxicology studies of
3 environmental tobacco smoke that would be
4 relevant to lung cancer risk and reviewed
5 them?
6 A. Primary literature which means they -- the
7 primary literature --
8 Q. As we defined it earlier.
9 A. So that would not include the U.S. Surgeon
10 General's Report; correct?
11 Q. That's correct.
12 A. Okay. The primary literature. It may
13 not -- I may have and it's been a number of
14 years.
15 Q. Okay. What about, same type of question
16 only this time with respect to the studies
17 of environmental tobacco smoke chemistry:
18 have you ever gone out and reviewed the
19 original work in that area?
20 A. The biochemistry of environmental tobacco
21 smoke?
22 Q. No, the chemistry.
23 A. The chemistry of environmental tobacco
24 smoke.
25 Q. Right.

1 A. That has to do with -- what's the difference
2 between that and toxicology?
3 Q. Well, Doctor, do you know the difference
4 between toxicology and chemistry?
5 A. Chemistry means the chemicals that are
6 involved. Toxicology means the effect on
7 the tissue and how that affects the tissue.
8 Q. Okay. Sounds like reasonable definitions to
9 me. Let's use those.
10 A. Okay.
11 Q. Have you obtained and reviewed the original
12 chemistry studies of environmental tobacco
13 smoke?
14 A. What is in environmental tobacco smoke?
15 Q. The chemistry studies as you just defined
16 them.
17 A. I may have, you know, earlier on, several
18 years ago. I'm sure I have, in fact,
19 because I've given lectures on this subject
20 to the public and so, therefore, I have.
21 Q. Okay. Let's talk about those chemistry
22 studies then. Maybe this is a blend of the
23 chemistry and other types of studies.
24 A number of times today in response to
25 Mr. Ohlemeyer's questions you stated that

1 you believed that there were, I think the
2 figure you used most often was approximately
3 50 carcinogens in environmental tobacco
4 smoke; is that right?
5 A. Yes. Yes.
6 Q. When you say that, what does the word
7 "carcinogen" mean?
8 A. Carcinogen means that that chemical, by
9 itself, or with another co-carcinogen, can
10 cause cancer.
11 Q. Can cause cancer or has been demonstrated to
12 cause cancer?
13 A. Has been demonstrated to cause cancer.
14 Q. In humans or animals?
15 A. Well, most -- I would not think it would be
16 ethical to have a human inhale specifically
17 a specific organism, and that would be the
18 only thing it would inhale and see if that
19 caused cancer; I think that would probably
20 be unethical. I would suspect that some of
21 the original studies were done on animals.
22 However, the fact is, is that, as we
23 know, primary smoke does cause lung cancer
24 and, after investigation, has been found
25 that that primary smoke does contain those

1 chemicals and, therefore, the -- I don't
2 know what the right term is -- they have
3 felt that the cigarette smoke was the cause
4 of the primary lung cancer.
5 Q. Let me ask you the question this way, then:
6 How many of the chemicals in environmental
7 tobacco smoke have been identified by an
8 authoritative body as human carcinogens?
9 A. I believe it's over 40.
10 Q. Over 40. You and Mr. Ohlemeyer also talked
11 for some length of time about relative risk
12 and epidemiologic topics. A few questions
13 in this area that I want to follow up on.
14 What is your interpretation of a
15 relative risk of 1.3?
16 A. My interpretation --
17 Q. As the central estimate.
18 A. My interpretation of a 1.3, according to
19 what I've understood, is that there is a
20 risk of about a 30 percent increased risk of
21 lung cancer.
22 Q. 30 percent increased risk above the base
23 line experienced by the general population.
24 A. Which is 1.
25 Q. Is that correct?

1 A. I believe that 10 percent of lung cancers
2 occur in nonsmokers.
3 Q. Okay. Can you answer the question I asked,
4 though?
5 A. You asked is --
6 Q. What's the likelihood that a U.S. nonsmoker
7 will develop lung cancer at some point
8 during their lifetime?
9 A. And they're not exposed to secondhand smoke,
10 they're not exposed --
11 Q. I said without regard, talking about for the
12 whole population, including those people
13 that are exposed and those people that
14 aren't exposed to ETS, just on a statistical
15 basis for the U.S. population, what's the
16 likelihood that someone, that a nonsmoker
17 will develop lung cancer at some point
18 during their lifetime?
19 A. I don't think -- I think what you're doing
20 is trying to --
21 Q. Ask a question.
22 A. In my -- I know you're asking a question.
23 I'm trying to answer it, believe me.
24 In my -- in my experience -- not my
25 experience. In my opinion, and what I

1 A. Yes.
2 Q. At one point in your answer you began
3 drawing in an analogy for Mr. Ohlemeyer and
4 you started talking about, I think a gun
5 with three chambers in it and putting a
6 bullet in one. What was that all about?
7 What did you mean by that?
8 A. I meant that the fact that if you have one
9 out of three bullets, and that's a 30
10 percent risk of getting hit by that bullet,
11 that that, to me, that would increase your
12 risk by 30 percent.
13 Q. Well, but those are two very different
14 statistical concepts, aren't they? The
15 concept of a 30 percent risk versus a 1.3
16 relative risk?
17 A. 1.3 relative risk versus -- 1.3 relative
18 risk to me means that there's a 30 percent
19 or increased risk over base line of
20 developing lung cancer. That's 30 percent.
21 Q. All right. Without regard to whether or not
22 a person is exposed to environmental tobacco
23 smoke, what is the likelihood that a
24 nonsmoker in the United States will develop
25 lung cancer during their lifetime?

1 understand is, and from what your question
2 is, you're kind of mixing everybody. I
3 believe the statistics say that 10 percent
4 of nonsmokers will develop lung cancer.
5 Now, from that point of view, if you're
6 exposed to secondhand smoke, your risk is 30
7 percent higher to develop lung cancer. You
8 see my point?
9 Q. Yes. Let me make sure I understand you.
10 You just -- did you just testify that 10
11 percent of nonsmokers develop lung cancer?
12 A. That's the statistics. That's my
13 understanding, yes.
14 Q. So is it your understanding that one out of
15 ten nonsmokers in the United States will
16 develop lung cancer at some point during
17 their lifetime?
18 A. That's the statistics, my understanding.
19 Now, an epidemiologist would be much more
20 likely to be able to, you know, answer that.
21 Q. Let's, for the purpose of my next question
22 only, let's assume you're right about that.
23 If that's the case, that an average person
24 has a one in ten chance of developing lung
25 cancer -- average nonsmoker has a one in ten

1 chance of developing lung cancer at some
2 time during their life, if they are exposed
3 to an exposure of environmental tobacco
4 smoke --
5 A. Let's rephrase the question. 10 percent of
6 lung cancers occur in nonsmokers. Okay?
7 Q. Well, that's a very different -- that's very
8 different testimony than what you gave to
9 me.
10 A. Than what you just said.
11 Q. Than what you said.
12 A. 10 percent of lung cancers occur in
13 nonsmokers. Not one in ten people that are
14 nonsmokers will develop lung cancer. 10
15 percent of lung cancers. 90 percent of lung
16 cancer are related to tobacco smoke.
17 Q. All right. Let me reask my original
18 question then, Doctor. If you don't know,
19 it's fine, just tell us. Are you familiar
20 with the incidence of lung cancer among
21 nonsmokers in the U.S.?
22 A. You're talking about people that are not
23 exposed to --
24 Q. Without regard to exposure.
25 A. I don't have the answer to that. I don't

1 want to be quick -- you know, tricked into
2 answering a question. I want to make sure I
3 answer the question so that it does not get
4 turned around.
5 Q. Well, do you feel as though anyone is trying
6 to trick you here today?
7 A. Yes.
8 Q. Who is that?
9 A. I mean (indicating). Let's go on.
10 Q. Well, have I done something that makes you
11 think I'm trying to trick you, Doctor?
12 A. Let's just go on.
13 MR. OHLEMEYER: Well, I think
14 Mr. Furr is entitled to an answer to the
15 question, because I'm, frankly, entitled to
16 an answer to the same question, Doctor.
17 THE WITNESS: I think when you ask
18 a question 10 times or 15 times in different
19 ways, and -- I'm not trying to change -- I'm
20 not trying to tell an untruth. I'm not
21 trying to tell a lie. I'm trying to tell
22 what I believe is the best answer that I
23 believe from the history and from the
24 evidence that is in this case. But when you
25 ask a question 10 times, but just change an

1 adverb or an adjective --
2 MR. OHLEMEYER: Doctor, I don't
3 want to interrupt but you haven't been shy.
4 nor have your attorneys, about pointing out
5 questions that you didn't understand or
6 wanted to be rephrased, you couldn't answer;
7 isn't that right?
8 MR. YOUNG: Well, I guess I'll
9 object. She's giving you an answer to the
10 question.
11 MR. OHLEMEYER: I want the record
12 to be very clear, counsel. I don't mean to
13 interrupt, but I want the doctor to tell
14 us --
15 MR. YOUNG: Let me just finish
16 before you say your piece and then you'll
17 have ample time. I think she's given you an
18 answer as to why she felt she was being
19 tricked, and this is just getting into an
20 area where we're just arguing back and forth
21 whether she is or isn't; she has her opinion
22 and you have yours.
23 MR. OHLEMEYER: Well, counsel, it's
24 a very serious charge.
25 And Doctor, I want to make sure the

1 record is very clear that you've been asked
2 to let me know whether or if you didn't
3 understand the question I've asked you.
4 Haven't I asked you that?
5 THE WITNESS: Yes.
6 MR. OHLEMEYER: And you certainly
7 have had an opportunity to let me know at
8 any point in time whether you did or didn't
9 understand the question I asked you; right?
10 THE WITNESS: Yes.
11 MR. OHLEMEYER: You had an
12 opportunity to ask the court reporter to
13 read back questions and answers at various
14 points in the day; isn't that right?
15 THE WITNESS: Yes.
16 MR. OHLEMEYER: All right. Thank
17 you, Doctor.
18 THE WITNESS: But, again, the point
19 is, is when you ask a question 10 times, you
20 act like I'm trying to lie to you. And
21 believe me, I'm not trying to lie to you.
22 MR. OHLEMEYER: Doctor, have I
23 suggested to you at any point in time today
24 that I thought you were lying to me?
25 THE WITNESS: It would appear to

Page 585

Page 587

1 me. when somebody asks a question 10 or 12
2 times. with different adverbs, different
3 adjectives. rephrasing the same question.
4 that. you know, you want me to change my
5 testimony or get mixed up or forget what I'm
6 saying.

7 MR. FURR: Let's not waste any more
8 time on this.

9 THE WITNESS: Okay. I'm just
10 answering your question.

11 Q. Okay, Doctor, do you have Exhibit 22 down
12 there which you've told us are a compilation
13 of notes you've made over the past week?

14 A. Yes.

15 Q. What was the purpose of your making these
16 notes?

17 A. To try to summarize a series of articles
18 that I obtained.

19 Q. Okay.

20 A. Well, not really. Well, yes. Go ahead.

21 Q. Okay. To try to summarize a series of
22 articles you obtained. How did you decide
23 to obtain those articles and why did you
24 obtain them?

25 A. Well, I had reviewed the other articles that

1 trying to be prepared for this deposition.

2 Q. You mean it was in articles that you read
3 that related the incidence of lung cancer
4 among nonsmokers to radon exposure?

5 A. No. Well, okay. The incidence of lung
6 cancer due to radon exposure. That is in
7 the differential.

8 Q. Okay. And you read it here because you're
9 concerned about the role that radon --
10 excuse me, you wrote it here because you
11 were concerned about the role that radon may
12 have played in Mrs. Wiley's lung cancer; is
13 that right?

14 A. No, I wrote it here to try to be prepared
15 for your questions and to review, in my
16 mind -- I had no idea this was going to be,
17 to be entered as an exhibit, so I'm writing
18 down all the things that I -- even the fact
19 that it's 900 degrees centigrade, the fact
20 that -- some of these other notes --

21 Q. Well, I'm only asking you about the radon
22 note now.

23 A. Okay. Well, your question is?

24 Q. Okay. Isn't it a fact, Doctor, that you are
25 concerned about the role that radon exposure

Page 586

Page 588

1 were there and I have a series of updated
2 articles that are sent by the Society of
3 Critical Care Medicine, it has to do with
4 pulmonary and critical care medicine, and
5 it's updated, and I decided I would want to
6 try to get the most recent information that
7 I could find, as well as the other
8 information that I had there, to prepare for
9 this deposition.

10 Q. Okay. Let me ask you about a few entries in
11 these notes, if I could. And let's start on
12 page 1. Would you read to us the last three
13 lines on the first page of your notes.

14 A. "Radon - 222 - a noble gas, is produced in
15 the decay of naturally occurring uranium
16 238. Source - gas in soil that penetrates
17 into homes."

18 Q. And what's the significance of this entry in
19 your notes?

20 A. Exactly what it says, to describe radon.

21 Q. Why were you doing that?

22 A. To prepare for this deposition.

23 Q. But what made you think you needed to be
24 ready to testify about radon?

25 A. It was in the articles that I read and I was

1 may have played in Mrs. Wiley's lung cancer?

2 A. No, I'm not.

3 Q. Then what was the purpose of this note,
4 Doctor?

5 A. Because, again, I'm summarizing, I'm reading
6 through this article, all through the
7 article, and I'm putting down things that I
8 thought if you asked me I could explain to
9 you and that would remind me of just
10 notations and thoughts.

11 Q. What thoughts does this note remind you of?

12 A. What thoughts does this note remind me of.
13 Radon is a noble gas, it's produced in the
14 decay of naturally occurring uranium 238.
15 It occurs in soil.

16 Q. It doesn't remind you of anything other than
17 what you wrote down on this page?

18 A. No.

19 Q. I must have misunderstood you a moment ago.

20 Would you go to the fourth page of your
21 notes. There's a heading at the top of that
22 page, "Bronchogenic carcinoma"; is that
23 correct?

24 A. Yes.

25 Q. I want to go down one, two, three, four, six

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 589	Page 591
<p>1 lines. And I believe it reads on that line</p> <p>2 "ETS 2-3X risk."</p> <p>3 A. Uh-huh.</p> <p>4 Q. What's that mean?</p> <p>5 A. Two to three times the risk of environmental</p> <p>6 tobacco smoke of lung cancer.</p> <p>7 Q. I'm sorry, could you say that again?</p> <p>8 A. Two to three times the risk of environmental</p> <p>9 tobacco smoke causing lung cancer. It</p> <p>10 increases two to three times the risk.</p> <p>11 Q. Wait a minute, Doctor. I thought you told</p> <p>12 us that the relative risk for ETS exposure</p> <p>13 is 1.3.</p> <p>14 A. 30 percent higher risk. That's in that</p> <p>15 article that I was quoting in my memory.</p> <p>16 This article presents it in a different way.</p> <p>17 It's two to three times the risk of normal</p> <p>18 for environmental tobacco smoke. I mean,</p> <p>19 you know. I mean, people present data in</p> <p>20 different ways.</p> <p>21 Q. But two to three times the risk correlates</p> <p>22 to a relative risk of two to three, doesn't</p> <p>23 it, Doctor?</p> <p>24 A. Two to three times?</p> <p>25 Q. Yes.</p>	<p>1 A. Because I'm not an epidemiologist.</p> <p>2 Q. Do you believe that this mathematical</p> <p>3 exercise that you and I are going through</p> <p>4 right now requires epidemiologic expertise?</p> <p>5 A. No, I think that it -- when I read two to</p> <p>6 three times the risk, I mean doubles or</p> <p>7 triples the risk of lung cancer. Just like</p> <p>8 ten to 25-fold increase in lung cancers</p> <p>9 related to smokers.</p> <p>10 Q. Okay. Let's go to the next line. Looks to</p> <p>11 me like I have a markout on this line, maybe</p> <p>12 two of them. Could you read me the next</p> <p>13 line on the fourth page?</p> <p>14 A. Asbestos? You're talking about the fourth</p> <p>15 page?</p> <p>16 Q. The next line, two lines.</p> <p>17 MR. YOUNG: Same page?</p> <p>18 MR. FURR: Same page, yes.</p> <p>19 A. The next line. 15 to 20 percent of lung</p> <p>20 cancers in nonsmokers.</p> <p>21 Q. What's that mean, Doctor?</p> <p>22 A. Well, I'd have to, since I was just writing</p> <p>23 these notes --</p> <p>24 Q. Go ahead, take a look at them.</p> <p>25 A. 15 to 20 percent of lung cancers in</p>
Page 590	Page 592
<p>1 A. That means if there was a 10 percent chance.</p> <p>2 it's been increased to 30 percent chance of</p> <p>3 environmental tobacco smoke?</p> <p>4 Q. No. You told us that describing the risk of</p> <p>5 environmental tobacco smoke as a relative</p> <p>6 risk of 1.3 --</p> <p>7 A. Which is 30 percent.</p> <p>8 Q. Which is 30 percent; right?</p> <p>9 A. Above the normal.</p> <p>10 Q. Two to three times the risk would be 200 to</p> <p>11 300 percent above the normal, wouldn't it,</p> <p>12 Doctor?</p> <p>13 A. No, it's two to three times the normal risk.</p> <p>14 I take this as --</p> <p>15 Q. And that would be 200 to 300 percent of the</p> <p>16 normal risk.</p> <p>17 A. I don't read it as such. I read it as it</p> <p>18 increases your risk of two to three times</p> <p>19 the normal risk.</p> <p>20 Q. Okay. If my risk is twice the normal risk,</p> <p>21 wouldn't you agree with me, Doctor, that</p> <p>22 that means that my risk is 200 percent</p> <p>23 normal risk?</p> <p>24 A. I can't tell you. I really can't.</p> <p>25 Q. Why is that?</p>	<p>1 nonsmokers. ETS 15 to 20 percent. That</p> <p>2 means that environmental tobacco smoke most</p> <p>3 likely is the cause of 15 to 20 percent of</p> <p>4 lung cancers in nonsmokers. I mean, I could</p> <p>5 go back and look at the original article.</p> <p>6 Q. No, I'll take it; if that's your</p> <p>7 understanding, that's fine.</p> <p>8 Let's try to turn that around, Doctor.</p> <p>9 Doesn't that also mean that 75 to 80 percent</p> <p>10 of the lung cancers in nonsmokers are caused</p> <p>11 by something other than tobacco smoke?</p> <p>12 A. Yes.</p> <p>13 Q. So just as a purely statistical matter, if</p> <p>14 someone tells you I have a nonsmoker with</p> <p>15 lung cancer, wouldn't you agree, Doctor,</p> <p>16 that the chances are about three out of four</p> <p>17 that that lung cancer was caused by</p> <p>18 something other than environmental tobacco</p> <p>19 smoke?</p> <p>20 A. Depends on the risk factors. What's the</p> <p>21 risk factors?</p> <p>22 Q. I said purely as a statistical matter.</p> <p>23 A. You can't do that. I think you have to look</p> <p>24 at the whole picture. I mean, if somebody</p> <p>25 told me they had lung cancer, they were a</p>

Page 593	Page 595
<p>1 nonsmoker, I would immediately say, okay.</p> <p>2 what are your risk factors? Why did you</p> <p>3 develop lung cancer?</p> <p>4 Q. Okay, Doctor, what are the risk factors to</p> <p>5 which the 75 to 80 percent of lung cancer</p> <p>6 cases in nonsmokers, that aren't</p> <p>7 ETS-related, what are the risk factors that</p> <p>8 are responsible for the other 75 or 80</p> <p>9 percent of the cases?</p> <p>10 A. Well, perhaps environmental, perhaps radon,</p> <p>11 perhaps other things.</p> <p>12 Q. Again, I just want to make sure, when you</p> <p>13 say "perhaps environmental," what do you</p> <p>14 mean?</p> <p>15 A. Environmental. Environmental. Any other</p> <p>16 environmental -- any other environmental</p> <p>17 factor that may cause lung cancer, I really</p> <p>18 can't tell you. I mean, there's other</p> <p>19 environmental factors that can occur.</p> <p>20 Q. Doctor, I don't want you to accuse me of</p> <p>21 tricking you here so I want you to</p> <p>22 understand what I'm talking about.</p> <p>23 You and Mr. Ohlemeyer had a discussion</p> <p>24 between 5 and 5:30 today about how you</p> <p>25 determined that Mrs. Wiley's lung cancer was</p>	<p>1 reason behind that, to diagnose from the</p> <p>2 exposure that they gave you, that's the</p> <p>3 diagnosis you give.</p> <p>4 Q. Okay. I don't want to go through all that</p> <p>5 again, but what was it about Mrs. Wiley's</p> <p>6 presentation that led you to believe that</p> <p>7 her cancer was caused by environmental</p> <p>8 tobacco smoke exposure? Not that she had</p> <p>9 cancer, but that the cancer that she had was</p> <p>10 caused by environmental tobacco smoke</p> <p>11 exposure.</p> <p>12 A. The cancer that she had was caused by</p> <p>13 environmental tobacco smoke. Her history.</p> <p>14 Q. Wait a minute. You gave me history and</p> <p>15 presentation as separate factors a moment</p> <p>16 ago.</p> <p>17 A. No, it's not. It's the same.</p> <p>18 Q. It's the same factor?</p> <p>19 A. You put the patient together, you don't</p> <p>20 split them apart, the history and</p> <p>21 presentation. I mean, it's like a puzzle:</p> <p>22 you fit all the pieces together that make</p> <p>23 the most sense and the most diagnosis.</p> <p>24 The presentation of hers, the fact that</p> <p>25 the adenocarcinoma, the fact that she had</p>
Page 594	Page 596
<p>1 attributable to environmental tobacco smoke,</p> <p>2 and part of that discussion focused on the</p> <p>3 process that you went through in ruling out</p> <p>4 other causes.</p> <p>5 Is that a fair characterization,</p> <p>6 Doctor?</p> <p>7 A. We went through -- we went through the</p> <p>8 reasoning of why I made the diagnosis that I</p> <p>9 did.</p> <p>10 Q. That's right. And wasn't part of that</p> <p>11 reasoning an exercise in ruling out other</p> <p>12 potential causes?</p> <p>13 A. Yes.</p> <p>14 Q. My question to you, that I didn't understand</p> <p>15 from your discussion with Mr. Ohlemeyer, is</p> <p>16 how did you go about ruling out the</p> <p>17 causes -- the causes that account for 75 to</p> <p>18 80 percent of the lung cancer in nonsmokers</p> <p>19 with respect to Mrs. Wiley's case?</p> <p>20 A. Again, you know, when you look at a patient,</p> <p>21 you look at what their presentation is. You</p> <p>22 look at what's the most likely cause from</p> <p>23 the history that they give you and the</p> <p>24 presentation that they give you.</p> <p>25 If it makes the most sense and the most</p>	<p>1 heavy inhalation by history of environmental</p> <p>2 tobacco smoke --</p> <p>3 Q. Doctor, I don't want to interrupt but I'm</p> <p>4 trying to move this along for all of us.</p> <p>5 A. Yes.</p> <p>6 Q. The question I'm trying to ask now is, I</p> <p>7 don't want to know about her history now, if</p> <p>8 we could set that aside. What can you tell</p> <p>9 me about her presentation and how that aided</p> <p>10 your effort in determining what the cause of</p> <p>11 her lung cancer was? Not that it was cancer</p> <p>12 but the cause of it.</p> <p>13 A. Well, it had to do with her presentation.</p> <p>14 Q. Yes, ma'am.</p> <p>15 A. Her history. And at the time there was</p> <p>16 nothing else that would make sense in this</p> <p>17 situation. I'm trying to answer your</p> <p>18 questions and I can't change the reality.</p> <p>19 Q. Doctor, are the words --</p> <p>20 A. I mean, I didn't go out and look for this</p> <p>21 patient. Believe me.</p> <p>22 Q. I'm not suggesting -- I haven't suggested</p> <p>23 here today that you did.</p> <p>24 A. And I'm not trying to make things up.</p> <p>25 Q. Do the words "presentation" and "history,"</p>

<p style="text-align: right;">Page 597</p> <p>1 are those synonymous in your mind?</p> <p>2 A. History is the past medical history, history</p> <p>3 is exposure, history is -- history and</p> <p>4 physical examination have to do with their</p> <p>5 family history, has to do with their</p> <p>6 environment, has to do with their</p> <p>7 occupation, it has to do with their work</p> <p>8 history, it has to do with their present</p> <p>9 illness, and their past medical illness.</p> <p>10 That's if you look at what the present -- I</p> <p>11 mean what an H&P is.</p> <p>12 Q. That all comes under the term "history"; is</p> <p>13 that correct, Doctor?</p> <p>14 A. Yes.</p> <p>15 Q. Now, can you tell us what presentation</p> <p>16 means?</p> <p>17 A. Presentation is, has to do with history as</p> <p>18 well, what they present you -- how a patient</p> <p>19 presents to you. If I had a patient in the</p> <p>20 emergency room that presented to me, I would</p> <p>21 take their history, plus their examination,</p> <p>22 plus the x-rays, plus all the data that they</p> <p>23 presented to me.</p> <p>24 Q. I'm having a hard time understanding what</p> <p>25 presentation means when you use the word</p>	<p style="text-align: right;">Page 599</p> <p>1 she have a persistent cough? And why did</p> <p>2 she have hemoptysis?</p> <p>3 Does that answer your question?</p> <p>4 Q. No, it doesn't.</p> <p>5 A. Okay, I'm sorry.</p> <p>6 Q. What would any of that tell you about</p> <p>7 environmental tobacco smoke?</p> <p>8 A. It would not.</p> <p>9 Q. Okay. That answered my question.</p> <p>10 Let's go to the history now. A number</p> <p>11 of times today you've told me --</p> <p>12 A. Let me go back. The fact that it was an</p> <p>13 endobronchial lesion makes me concerned</p> <p>14 that -- and you have to understand, and you</p> <p>15 can ask any of the other physicians that</p> <p>16 I've worked with over the last 14 to 18</p> <p>17 years that, when I see a patient, I like to</p> <p>18 have everything fit together. And I like to</p> <p>19 make sure, as much as possible, that things</p> <p>20 make sense.</p> <p>21 If I saw a lesion in the airway, I</p> <p>22 would wonder what type of inhalation this</p> <p>23 patient had to cause an endobronchial</p> <p>24 lesion. So I wanted to put that in there.</p> <p>25 I mean, you know, that is -- that, to me, is</p>
<p style="text-align: right;">Page 598</p> <p>1 "presents" to define it. Is there any way</p> <p>2 you can define it without using the word</p> <p>3 "presents"?</p> <p>4 A. Presentation -- essentially the patient and</p> <p>5 all the data that occurs with that patient.</p> <p>6 And all the x-rays.</p> <p>7 Q. Let me ask the question this way: If</p> <p>8 Mrs. Wiley had never said anything to you</p> <p>9 about environmental tobacco smoke, if no one</p> <p>10 else ever said anything to you about her</p> <p>11 having been exposed to environmental tobacco</p> <p>12 smoke, was there anything about Mrs. Wiley's</p> <p>13 body, including her lung and the tumor that</p> <p>14 you think was in her lung, that indicated to</p> <p>15 you that she had been exposed to</p> <p>16 environmental tobacco smoke, or that</p> <p>17 environmental tobacco smoke was the cause of</p> <p>18 any disease that she had?</p> <p>19 A. If -- if this patient could not speak to me</p> <p>20 and I had no other history available, when I</p> <p>21 did the bronc I would ask myself, Why does</p> <p>22 this patient have an endobronchial lesion</p> <p>23 that is totally obstructing the right</p> <p>24 bronchus intermedius? Why did she have a</p> <p>25 right middle lobe syndrome before? Why did</p>	<p style="text-align: right;">Page 600</p> <p>1 part of the presentation. As well as the</p> <p>2 fact that she had a right lung mass.</p> <p>3 Q. Okay. Tell me if I'm being unfair, Doctor,</p> <p>4 but the bottom line, from all that you just</p> <p>5 told us, is that there's nothing about</p> <p>6 Mrs. Wiley's physical presentation that</p> <p>7 indicated anything about environmental</p> <p>8 tobacco smoke and its involvement in her</p> <p>9 disease.</p> <p>10 A. I don't -- I don't -- her physical</p> <p>11 presentation.</p> <p>12 Q. Yes.</p> <p>13 A. The fact, again, that this was an</p> <p>14 endobronchial lesion, that she had been ill</p> <p>15 for some time. Usually, as I said before,</p> <p>16 an adenocarcinoma does not -- at least in my</p> <p>17 experience, I have not diagnosed that as in</p> <p>18 the airway itself, and that struck me as</p> <p>19 extremely odd. And you can note that on my</p> <p>20 bronchoscopy note. I said that --</p> <p>21 bronchoscopy note from the 6th of June,</p> <p>22 suspect squamous cell carcinoma. You know.</p> <p>23 primary neoplastic process, right main stem</p> <p>24 with total occlusion of the bronchus</p> <p>25 intermedius. It was not a lesion that was</p>

Page 601

1 coming up from the outside. It was a lesion
 2 in the airway.
 3 So, to me, trying to be as thorough as
 4 possible in this situation, and in every
 5 patient that I take care of, you try to
 6 answer the question of why this patient had
 7 this particular lesion.
 8 Q. Okay. My question is, what does any of that
 9 tell you, any of those physical findings.
 10 what do any of those physical findings tell
 11 you about the etiology of her disease?
 12 A. It appears to me that I would be concerned
 13 about some type of toxic chronic inhalation
 14 that may have been the etiology of her
 15 disease.
 16 Q. But it sure wouldn't point to environmental
 17 tobacco smoke specifically, would it?
 18 A. I would go back to the patient and her
 19 family and I would investigate from there.
 20 Q. You'd have to go outside the physical
 21 findings to do that; right?
 22 A. Yes.
 23 Q. Let's go outside the physical findings.
 24 Let's go back to the history now. And a
 25 number of times today you've told us that,

Page 602

1 based on the history, that you found
 2 environmental tobacco smoke to be the most
 3 likely etiologic factor relating to her
 4 cancer; is that right?
 5 A. Yes.
 6 Q. In fact, Doctor, if 75 to 80 percent of the
 7 lung cancers in nonsmokers are related to
 8 something other than environmental tobacco
 9 smoke, isn't it true it was far more likely
 10 to be something else than environmental
 11 tobacco smoke that was the cause of her lung
 12 cancer?
 13 A. With the presenting factors that she had,
 14 and the presenting history, I would still
 15 make the same diagnosis. I mean, how else
 16 would the 20 to 25 percent or 30 percent
 17 exist if the diagnosis was never made?
 18 Q. What's that mean, Doctor? I don't
 19 understand.
 20 A. That means that you can't discount -- you
 21 can't discount those percentage of patients
 22 just because -- that's why we're physicians
 23 and that's why we make diagnoses. You can't
 24 just say, okay, I just don't believe that --
 25 it's such a small percentage, I'm not even

Page 603

1 going to diagnose that. If that was the
 2 case, we would all have the same diagnoses.
 3 You understand what I'm saying?
 4 Q. Doctor, isn't it a fact that on a number of
 5 occasions today you have discounted factors
 6 other than environmental tobacco smoke as
 7 being the cause of her disease because they
 8 were such small percentages in your mind?
 9 MR. YOUNG: I'll object. We've
 10 been over that.
 11 MR. FURR: I've never asked this
 12 question before.
 13 MR. YOUNG: The whole day, though.
 14 it's been asked and answered and covered for
 15 hours and hours, yes.
 16 MR. FURR: No, it hasn't.
 17 Read the question back to the
 18 doctor, please.
 19 (The requested material was read back
 20 by the reporter.)
 21 MR. YOUNG: Same objection.
 22 A. The point is, is that the presentation is
 23 such that that -- I mean, if someone said
 24 they walked in and dropped a bowling ball on
 25 their foot and then you asked them what

Page 604

1 their -- I mean, it's the same thing. You
 2 see my point?
 3 Q. No, Doctor, I don't.
 4 A. You don't see the point. The point is, is
 5 that you look at the history, you look at
 6 the presentation, you look at what
 7 information and what evidence they give you,
 8 and you correlate the most likely diagnosis
 9 with that evidence and that history and that
 10 presentation.
 11 Q. Dr. Turner, did I understand you today to
 12 testify that there are six chemicals that
 13 have been identified by the EPA as group A
 14 carcinogens?
 15 A. Yes.
 16 Q. Is that your understanding?
 17 A. Yes.
 18 Q. Do you have Exhibit 3 handy? I want to take
 19 you back to a couple things on Exhibit 3.
 20 And let's start with No. 1 at the bottom of
 21 the page, which are two sentences that you
 22 and Mr. Ohlemeyer talked about some earlier
 23 today. Do you recall that?
 24 A. Yes.
 25 Q. The second sentence reads, "If his frame of

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 605

1 mind at the time was the fact that we were
2 most likely adenocarcinoma, that would help
3 him make a decision about what he could
4 testify to." You see that?
5 A. Yes.
6 Q. Now, you wrote that sentence; is that right,
7 Doctor?
8 A. I dictated that sentence.
9 Q. You dictated. What does that sentence mean?
10 A. Well --
11 MR. YOUNG: I object.
12 Mr. Ohlemeyer spent quite a bit of time on
13 this and he had lengthy discussion about
14 what that sentence and the other sentence
15 meant and whether or not a third sentence
16 would apply and it's just rehashing what
17 we've been through already.
18 MR. FURR: Go ahead, Doctor.
19 A. Which is what I said before.
20 Q. What is that?
21 A. When I dictate -- how do I -- I mean, the
22 point is, what you're asking me to do is
23 pull those two sentences together.
24 Q. I'm just asking you about one sentence.
25 Doctor.

Page 606

1 A. No, no. You're saying if his frame of mind
2 at the time was the fact that we were most
3 likely adenocarcinoma, that would help him
4 make a decision about what he could testify
5 to, the question arises why we didn't start
6 aggressive chemotherapy.
7 First of all, I think it would behoove
8 you to ask Dr. Songer that question.
9 Q. Doctor, you wrote these sentences, not
10 Dr. Songer.
11 A. No, I dictated the sentence. I did not
12 write it. I dictated it.
13 Q. Now, there's an important distinction.
14 A. And as you know, sometimes dictations,
15 people --
16 Q. Is it your testimony this is an inaccurate
17 transcription of your dictation?
18 A. My testimony is when I dictate -- I can't
19 tell you if words were left out because I --
20 unless you have the original tape and what I
21 dictated to, I can't tell you if words were
22 left out or not.
23 Q. This sentence, as it appears on Exhibit 3,
24 does that sentence have any meaning to you?
25 A. If his frame of mind at the time was the

Page 607

1 fact that we were most likely, probably most
2 likely dealing with -- likely
3 adenocarcinoma, that would help him make a
4 decision about what we could testify -- what
5 he could testify to.
6 Again, I think that you should ask
7 Dr. Songer about that because he's the one
8 that would testify to it. Not me.
9 Q. Okay. Did you dictate that sentence?
10 A. I dictated that sentence.
11 Q. What did you mean when you dictated that
12 sentence?
13 A. Well, you have to go to the top, the
14 sentence before. "We are going to review
15 the chart to see what his frame of mind was
16 and why we didn't start aggressive
17 chemotherapy. If his frame of mind at the
18 time was the fact that we were most likely
19 adenocarcinoma, that would help him make a
20 decision about what he could testify to."
21 So it would seem to me like -- again, I
22 would recommend that you talk to Dr. Songer.
23 but if this was adenocarcinoma, that may be
24 one reason why he did not start aggressive
25 chemotherapy because there was nothing else

Page 608

1 to do for this lady.
2 Q. Okay. But how was this reconstruction of
3 his frame of mind, how did you believe that
4 that was going to affect his decision about
5 what he could testify to?
6 A. How would --
7 MR. YOUNG: Well, let me -- I want
8 to make an objection because it has been
9 asked and answered.
10 MR. FURR: It's been asked, it
11 hasn't been answered.
12 THE WITNESS: I'm trying to answer
13 the question.
14 MR. YOUNG: Let me talk, will you,
15 Doctor?
16 THE WITNESS: Yes.
17 MR. YOUNG: We've been here since
18 9:00 this morning, it's now 25 till 7,
19 you've been very cordial and very agreeable,
20 took breaks whenever necessary and a lunch
21 break, but still the same, it is a long day
22 and we're continuing to go over the same
23 material that we've gone over at length
24 throughout the course of this entire day.
25 And I think we ought to try and move to

Page 609

1 topics that haven't been covered and not
 2 cover those that have been asked and
 3 answered repeatedly.
 4 MR. FURR: I agree completely. My
 5 opinion is it's been asked a lot of times,
 6 it hasn't been answered. That's why I'm
 7 trying to ask it again.
 8 A. What would you like me to answer?
 9 Q. I'd like for you to tell me what you meant
 10 when you wrote that second sentence.
 11 A. Well, if I knew what I meant -- if I could
 12 tell you what that sentence meant, with
 13 those two sentences, I would gladly answer
 14 you.
 15 Q. You just can't do it; is that --
 16 A. Because I'm not Dr. Songer. And my point
 17 is, if his frame of mind at the time was the
 18 fact that we were most likely dealing with
 19 an adenocarcinoma, that would help him make
 20 a decision about what he could testify to;
 21 since I am talking about Dr. Songer, then I
 22 think that you need to ask him. I don't
 23 want to put words in his mouth as well.
 24 Q. Well, I tell you what throws me off, and why
 25 I'm having trouble understanding. I thought

Page 610

1 I was with you when you just simply said I
 2 don't know what I meant there, but then you
 3 threw in you'd have to ask Dr. Songer.
 4 It seems to me that I'm talking to the
 5 right deponent now to ask them what this
 6 language means in an exhibit that they
 7 dictated, so I don't understand how
 8 Dr. Songer is in a better position to
 9 explain to me what you meant when you
 10 dictated these sentences.
 11 Can you help me understand that?
 12 A. Well, it says, If his frame of mind at the
 13 time was the fact that we were most likely
 14 dealing with -- or likely adenocarcinoma,
 15 that would help him make a decision about
 16 what he could testify to.
 17 The point, if his frame of mind, it's
 18 exactly what it says. If his frame of
 19 mind -- I'm not trying to be difficult.
 20 believe me. It says, "If his frame of mind
 21 at the time was the fact we were most likely
 22 adenocarcinoma, that would help him make a
 23 decision about what he could testify to."
 24 It's his frame of mind. He's the one from
 25 an oncologist's standpoint that will

Page 611

1 testify.
 2 The first sentence is, "We are going to
 3 review the chart to see what his frame of
 4 mind was and why we didn't start aggressive
 5 chemotherapy." So what you're trying to do
 6 is act like I'm the oncologist. I'm not the
 7 oncologist; Dr. Songer is.
 8 Q. You know, Doctor, I'm trying to be very
 9 polite. It doesn't help in this process to
 10 cast aspersions about my motive.
 11 A. I'm not. I'm not, really.
 12 Q. About this trickery stuff that you've thrown
 13 out once already, it doesn't advance this
 14 process any.
 15 A. Okay.
 16 Q. I think if I just ask the questions and you
 17 just answer them and we don't -- try not to
 18 comment on what each other is doing, this
 19 will all go a lot better; is that agreeable
 20 to you?
 21 A. Yes. I've already told you, though, I
 22 cannot answer the question because I am not
 23 Dr. Songer. I don't know what else you want
 24 me to say.
 25 Q. Let me ask it this way, then: When you

Page 612

1 wrote this sentence --
 2 A. When I dictated this sentence.
 3 Q. When you dictated this sentence, did you
 4 have a belief or understanding as to how
 5 determining that the tumor was most likely
 6 an adenocarcinoma would affect Dr. Songer's
 7 decision about what he could testify to?
 8 A. No. I mean, this was 1993, May of '93.
 9 That was four years ago.
 10 Q. Okay. Are you telling me now that you
 11 didn't have a belief when you dictated this
 12 sentence or that, if you did, you simply
 13 don't remember?
 14 A. I can tell you what those sentences are.
 15 And if it doesn't -- I mean, if I can't
 16 think of -- I can't interpret those
 17 sentences other than what I've said to you,
 18 that's about the best I can do.
 19 Again, I think Dr. Songer -- I wrote
 20 that, or dictated that after I spoke to
 21 Dr. Songer about the fact that why we didn't
 22 start aggressive chemotherapy.
 23 Q. Okay. Let's stay on Exhibit 3 for a minute.
 24 Let's go up to the first paragraph. I'm not
 25 sure how to pronounce, is it Dr. Kocoshis?

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 613

1 A. Dr. Kocoshis.
 2 Q. Dr. Kocoshis. In the first paragraph, the
 3 sentence says, "I, in turn, checked with
 4 Dr. Thomas Kocoshis, and he felt that the
 5 tumor from the slides is probably related to
 6 lung cancer, but given the elevated CA15-3
 7 possibly breast or pancreas." Do you see
 8 that?
 9 A. Yes.
 10 Q. Now, earlier today when Mr. Ohlemeyer asked
 11 you about that, I thought I heard you say,
 12 or I should say speculate that Dr. Kocoshis'
 13 feeling may have been influenced by the fact
 14 that he looks at lots of slides and probably
 15 gave this review of this slide a fairly
 16 brief review and didn't go beyond that. Is
 17 that what you said?
 18 A. I said when he was -- when I was asking him
 19 about this, his concern was the CA15-3.
 20 Q. Okay. So, in fact, Dr. Kocoshis' concern
 21 was not based on the slide, but was based on
 22 this CA15-3 titer result that was in the
 23 medical record; is that right?
 24 A. That's not what I said. He felt the tumor
 25 from the slides is probably related to lung

Page 614

1 cancer, but given the elevated CA15-3,
 2 possibly breast or pancreas. He's going
 3 through the differential diagnosis from the
 4 information that I gave him.
 5 Q. So his reluctance to rule out breast or
 6 pancreatic primary cancer was based on the
 7 elevated CA15-3; is that right?
 8 A. From the slides I gave to him, at this point
 9 in time, in May of '93, two years after her
 10 death, from the slides I gave to him, not
 11 the autopsy, you know, that's the question.
 12 That's what his concern was, the CA15-3.
 13 Q. Okay.
 14 A. At least that's what this note states.
 15 Q. Well, you wrote this note, didn't you?
 16 A. I dictated the note, yes.
 17 Q. So you believed this notation when you
 18 dictated it, didn't you?
 19 A. Yes.
 20 Q. And you thought it was accurate to the best
 21 of your understanding of his feelings?
 22 A. I dictated what he stated to me.
 23 Q. In the next paragraph there's a reference to
 24 a Dr. Triplett. Who is Dr. Triplett?
 25 A. He's a pathologist.

Page 615

1 Q. Do you know him personally or by reputation?
 2 A. I know him. He works here.
 3 Q. What is your opinion of Dr. Triplett's
 4 professional skill?
 5 A. My understanding, he's a good pathologist.
 6 Q. Okay. You asked him to review some
 7 materials in this case; is that right?
 8 A. Review the slides himself. I asked him to
 9 review the slides.
 10 Q. Okay. And your understanding is that he did
 11 review the slides?
 12 A. Yes.
 13 Q. And I take it that he also assessed the
 14 clinical presentation as well; is that
 15 correct?
 16 A. I don't know whether he assessed the
 17 clinical presentation. He reviewed the
 18 slides.
 19 Q. Okay. Doesn't the next sentence say that
 20 "He stated that with the clinical
 21 presentation..."?
 22 A. "With the clinical presentation as well as
 23 the slides that he had looked at..."
 24 Q. So when you made this notation, or dictated
 25 this notation you believed that he had

Page 616

1 reviewed the clinical presentation also, I
 2 take it.
 3 A. Yes.
 4 Q. And having done those things, Dr. Triplett
 5 believed that there was a 30 percent chance
 6 that the primary tumor that Mrs. Wiley had
 7 was either breast, bowel, or pancreatic; is
 8 that correct?
 9 A. Yes. But in the next sentence it says, "In
 10 reviewing the autopsy report, however, the
 11 pancreas was normal with the exception of
 12 peripancreatic metastatic tissue."
 13 Q. What's that have to do with Dr. Triplett's
 14 opinion?
 15 A. Because that's all together there.
 16 Q. That's your effort at explaining away
 17 Dr. Triplett's opinion.
 18 A. No, I can't tell you that.
 19 MR. YOUNG: I object. That's
 20 argumentative.
 21 A. I'm not saying that. This is a discussion.
 22 You can't take one sentence out of the whole
 23 thing.
 24 Q. Notwithstanding the rest of this discussion,
 25 Dr. Triplett's opinion was that there was a

Page 617

Page 619

1 30 percent chance that Mrs. Wiley's primary
 2 was breast, bowel, or pancreatic tumor; is
 3 that right?
 4 A.No. the point is --
 5 MR. YOUNG: I object, that
 6 misstates the testimony.
 7 A.I mean, I'm not putting words in here. We
 8 had a discussion. He reviewed -- you
 9 already said it, he reviewed the clinical
 10 presentation; that would include the autopsy
 11 report. It states, "In reviewing the
 12 autopsy report, however, the pancreas was
 13 normal with the exception of peripancreatic
 14 metastatic tissue. This would be pretty
 15 unusual if they did not find a primary
 16 pancreatic tumor inside the pancreas and
 17 just not on the peripancreatic lymph nodes.
 18 The stomach was looked at and was negative.
 19 The bowel was looked at and was negative. A
 20 gross evaluation of the breasts was
 21 completed with palpation, and this was
 22 negative. Therefore, the breasts were not
 23 looked at at the time of the autopsy."
 24 Clinical presentation, I mean, from
 25 this dictation -- I mean, I'm asking these

1 MR. YOUNG: Let's not argue.
 2 Q.You also have spoke today a couple of times
 3 about a Mr. Repace; is that right?
 4 A.I've spoken I believe one or two times, yes.
 5 Q.That's what I said. And you relied upon
 6 Mr. Repace as an authoritative source about
 7 certain issues related to environmental
 8 tobacco smoke; is that right?
 9 A.He wrote several articles I have read. And
 10 I believe in one of my notations, I don't
 11 know whether I called him or whether -- I'd
 12 have to look at the notation again with his
 13 name there.
 14 Q.Let's go to Exhibit 19.
 15 A.Okay. "On May 3 I discussed this case with
 16 J.L. Repace."
 17 Q.Doctor, in one place here you call him
 18 Mr. Repace, in another place you call him
 19 Dr. Repace. Do you know which it is?
 20 A.No. I mean I -- I transpose -- no.
 21 Q.Now, beginning with the third paragraph,
 22 first sentence in the third paragraph reads:
 23 "Dr. Repace did state that he would be able
 24 to quantify hopefully the exposure that
 25 Mrs. Wiley had to secondhand smoke." Do you

Page 618

Page 620

1 people for their opinion. I mean, we're
 2 trying to decide whether this case is, like
 3 you said, and other individuals have said,
 4 have outside critiques, I was trying to get
 5 pathologists and other individuals to look
 6 at slides, look at the clinical presentation
 7 and independently come up with what they
 8 thought. And this is what this is saying.
 9 Q.Okay. I'm just trying to understand, having
 10 done all that, and in light of all the
 11 considerations that you just read to us,
 12 Dr. Triplett's opinion was that there's a 30
 13 percent chance that Mrs. Wiley's cancer was
 14 either primary to the breast, bowel, or
 15 pancreas.
 16 A.That's not what this said. You have to look
 17 at the whole paragraph.
 18 Q.We'll let the jury decide what this says.
 19 A.Well, give the jury the entire paragraph,
 20 which is -- I mean, you're picking out
 21 sentences. You're taking part of my
 22 conversation and picking out whatever you
 23 want and you can't do that.
 24 Q.Just more trickery, Doctor.
 25 A.Or you shouldn't do that.

1 see that?
 2 A.Yes.
 3 Q.Now, did you, in fact, ask Mr. Repace to
 4 quantify her ETS exposure to secondhand
 5 smoke?
 6 A.Did I ask?
 7 Q.Yes.
 8 A.I did not.
 9 Q.Do you know whether anyone asked Mr. Repace
 10 to quantify Mrs. Wiley's exposure to
 11 secondhand smoke?
 12 A.The attorneys may have. I am not aware that
 13 they did or did not.
 14 Q.Have you seen anything produced by
 15 Mr. Repace or heard anything from the
 16 attorneys as to whether Mr. Repace attempted
 17 to quantify Mrs. Wiley's exposure to
 18 secondhand smoke?
 19 A.I have not heard anything.
 20 Q.A couple of times today you've mentioned
 21 what you described as cellular markers of
 22 environmental tobacco smoke exposure. You
 23 recall mentioning that today?
 24 A.Cellular biochemical markers?
 25 Q.Right. You recall mentioning it?

Page 617 - Page 620

STEWART-RICHARDSON & ASSOCIATES
COURT REPORTERS (317) 237-3773

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 621

1 A. Yes.
 2 Q. Do you know whether anyone has attempted to
 3 determine whether or not tissue from
 4 Mrs. Wiley exhibits cellular or biochemical
 5 markers that would indicate exposure to
 6 secondhand smoke?
 7 A. Okay. Ask the question again. Do you know
 8 if what?
 9 MR. YOUNG: I'll object. That's
 10 the same area that was covered earlier
 11 today; exactly same thing.
 12 MR. FURR: Same area, different
 13 question.
 14 Q. Do you know whether any work was done in
 15 this area with respect to Mrs. Wiley?
 16 A. I can't tell you for sure, no.
 17 Q. When you say "for sure," do you have some
 18 belief as to whether some work was done?
 19 A. I can't tell you because the attorneys have
 20 not really told me much about all the other
 21 stuff. I don't know who they have talked
 22 to. I don't know what all the evidence they
 23 have. I don't --
 24 Q. Have they told you -- excuse me, go ahead if
 25 you're not finished.

Page 622

1 A. No. go ahead.
 2 Q. Have they told you anything at all about
 3 whether these type of studies were being
 4 performed with respect to Mrs. Wiley?
 5 A. They have told -- they have not told me for
 6 sure that these are done. Just like they
 7 haven't told me whether this Dr. Repace did
 8 any of the work that -- you know. All I
 9 know is what I have here. I mean, we have
 10 had very few conversations over the last
 11 five years or four years.
 12 Q. I may have misunderstood your testimony
 13 earlier today but when you were testifying
 14 about the transthoracic biopsy that was
 15 performed on Mrs. Wiley, I couldn't tell
 16 whether you were saying that that procedure
 17 enabled the determination of the cell type
 18 of the tumor or the location of the primary
 19 tumor. Could you clarify that for me?
 20 A. It confirmed the cell type.
 21 Q. That procedure, in fact, did not provide any
 22 evidence about the location of the primary
 23 tumor, did it?
 24 A. Well, they went where the money was. They
 25 went -- I believe the transthoracic biopsy

Page 623

1 was into the area with the largest mass of
 2 tissue, which is what they would do, to
 3 decrease the risk of having a collapsed lung
 4 or a hemothorax.
 5 Q. But my question is, the results obtained by
 6 performing that procedure did not provide
 7 any evidence about the source of the primary
 8 tumor, did it?
 9 A. The site or the source?
 10 Q. The site of the primary tumor.
 11 A. The site of the primary tumor. Okay, your
 12 question is -- it confirmed the fact that we
 13 were dealing with an adenocarcinoma.
 14 Q. Okay. Didn't tell you where the adeno,
 15 where the primary adeno was, though, did it?
 16 A. It did not tell me -- if a transthoracic
 17 biopsy is done on a lung lesion, I mean, it
 18 could have been done on a metastatic lesion.
 19 The problem is, is that, I mean, you would
 20 not want to go for a transthoracic biopsy if
 21 there's -- I mean, doing a CT-guided
 22 aspiration of an intra-abdominal mass would
 23 be much less risky.
 24 It depends on where the tumor is, where
 25 we think the primary is, what the risk of

Page 624

1 hitting bowel was, what's the risk of
 2 hitting lung. There's a lot of things that
 3 enter into that.
 4 Q. Okay, Doctor, I understand that you're
 5 testifying that the decision as to
 6 performing the transthoracic biopsy was
 7 informed by your belief about this primary
 8 source of the tumor. I understand that.
 9 A. Yes.
 10 Q. My question is, the results obtained by
 11 performing that procedure did not provide
 12 any additional evidence about the primary
 13 source of the tumor, did it?
 14 A. No.
 15 Q. Okay. Dr. Turner, are you aware of any
 16 scientific data that suggests an increased
 17 lung cancer risk from environmental tobacco
 18 smoke exposure six to eight years after
 19 cessation of that exposure?
 20 A. I can't tell you -- you're asking if that --
 21 if there is evidence out there or there was
 22 studies out there; is that what you're
 23 asking?
 24 MR. FURR: You can read back the
 25 question if you want, ma'am.

Page 625

Page 627

1 (The requested material was read back
2 by the reporter.)

3 A.I cannot tell you that there is literature
4 out there that looked at epidemiologic
5 studies six to eight years. I would
6 suspect, given the risk involved, that there
7 would still be some increased risk of lung
8 cancer. Have there been epidemiologic
9 studies done? I have not seen them.

10 Q.That's what I'm asking you. With all due
11 respect, I'm not asking for your suspicion
12 right now.

13 A.Yes.

14 Q.I'm asking for your knowledge as to whether
15 such studies exist.

16 A.I'm not aware. I have not read studies that
17 have specifically noted that. Or studied
18 that population.

19 MR. FURR: One more thing, I might
20 be done.

21 MR. OHLEMEYER: Can I ask a couple
22 questions while you're looking, Mr. Furr?

23 MR. FURR: I don't have any
24 objection, if counsel doesn't.

25 MR. OHLEMEYER: I just have a

1 did you feel any special affinity for her or
2 have any special interest in her case?

3 A.I felt sorry for her. I felt she was in a
4 lot of pain. And I wanted to relieve that
5 pain. Did I -- special affinity. I mean.
6 what does that mean? That I sent them
7 letters of condolences or --

8 Q.Well, did you do that?

9 A.No.

10 Q.Was Mrs. Wiley's case a frustrating case for
11 you as these cases -- I mean, I realize
12 everything you deal with is difficult, but
13 was it particularly frustrating?

14 MR. YOUNG: Well, I'll object, it's
15 vague.

16 THE WITNESS: Do you want me to
17 answer the question?

18 MR. OHLEMEYER: Sure.

19 THE WITNESS: I don't know why you
20 object if I have to answer the question.

21 MR. YOUNG: I object, that's okay,
22 you need to continue to answer the question.

23 THE WITNESS: I'm glad you object,
24 though.

25 A.Was it a frustrating case? In the fact that

Page 626

Page 628

1 couple.

2 DIRECT EXAMINATION CONTINUING

3 BY MR. OHLEMEYER:

4 Q.Dr. Turner, did you attend Mrs. Wiley's
5 funeral?

6 A.No.

7 Q.Did you attend the visitation?

8 A.No.

9 Q.How and when did you obtain her obituary?

10 A.Oftentimes the individuals, the office staff
11 will cut obituaries out and put in the
12 chart.

13 Q.I don't -- this may be unfair to your other
14 patients. I'm sure you feel the same way
15 about all of them, but do you have patients
16 you feel more affinity for or interest in?

17 A.Depends on -- I mean, I have patients that
18 I've been caring for for 15 years. It has
19 to do with the patient and -- I mean, I've
20 had patients, trauma patients that I've
21 cared for for three months. I mean, you
22 know.

23 Q.I understand. With respect to Mrs. Wiley,
24 though, because she was a nurse, she was
25 connected to your profession in some way,

1 she was in a lot of pain, yes. Is it any
2 more frustrating than hundreds of other
3 cases that I have taken care of? No.

4 Q.Exhibit 6 previously marked in your earlier
5 session deals with a meeting with Sanford
6 and Bernstein about your retirement fund.

7 A.Oh, yeah. I was making notes on the back of
8 that.

9 Q.What do the notes pertain to?

10 A.Well, these are data from tobacco farmers in
11 Indiana, I believe, and I believe maybe
12 parts of Ohio -- Kentucky.

13 Q.I mean, what data? Why? What interest do
14 you have in all of that?

15 A.I was named to the Tobacco Task Force about
16 two years ago by the Indiana State Medical
17 Association, because of my interest in
18 education of children and my interest in
19 this subject. There are five other
20 physicians across the state that were named
21 to that. I have no idea why I was named to
22 that except I was told by the president of
23 the Indiana State Medical Association, they
24 asked me if I would do that. And we were
25 discussing tobacco farmers and how to,

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 629

1 hopefully, improve their lot. That's all.
 2 Q. Do you think people who grow tobacco bear
 3 any responsibility for the health risks
 4 associated with the purchase and use of
 5 tobacco products?
 6 MR. YOUNG: Well, I'll object,
 7 that's outside the issues of the case and
 8 it's irrelevant.
 9 A. I think that -- do they bear responsibility?
 10 I do not believe that. I think that they
 11 have farmland that is often not used for
 12 other crops and that they are paid highly by
 13 the tobacco industry to grow that tobacco.
 14 And I believe that they are victims just
 15 like smokers are victims or secondhand smoke
 16 exposure are victims.
 17 Q. What are they victims of?
 18 A. The tobacco industry. Of having a product
 19 that is addictive and that they sell.
 20 Q. The people who --
 21 A. That causes harm.
 22 Q. The people who grow tobacco, in your
 23 opinion, are victims of the tobacco
 24 industry.
 25 A. Yes.

Page 630

1 Q. Are the people who sell tobacco in retail
 2 stores victims of the tobacco industry?
 3 A. Are store owners?
 4 Q. Victims of the tobacco industry.
 5 A. I think they make a decision about whether
 6 to sell it or not. And because it is a
 7 lucrative -- they are trying to run a
 8 business and, therefore, they sell it.
 9 Q. Does that make them victims? Or are
 10 people -- let me ask a better question. Are
 11 people who make choices victims of those
 12 choices?
 13 A. I think it has to do with the circumstances.
 14 Q. All right. One other question, Doctor. Do
 15 you have any -- have you ever examined your
 16 retirement account to see if there's any
 17 tobacco stocks in it?
 18 A. There was at one time. And I sold it all.
 19 Q. Sold it all.
 20 A. Yes.
 21 Q. So when did you do that?
 22 A. At a loss.
 23 Q. When did you do that?
 24 A. Couple years ago, I believe. Several years
 25 ago, in fact. I don't know. I don't know.

Page 631

1 You'll have to ask Mr. Bernstein in New
 2 York.
 3 Q. Was it before or after you got involved with
 4 Mrs. Wiley's treatment and care?
 5 A. Well, the problem --
 6 MR. YOUNG: Well, I'll object.
 7 that's totally irrelevant.
 8 Q. It's my last question, Doctor.
 9 MR. YOUNG: Intervening with her
 10 private affairs.
 11 Q. The sooner you answer it, the sooner I'm
 12 finished. When did you make a decision to
 13 divest yourself of your tobacco stocks?
 14 A. Well, the problem is, I was unaware they had
 15 invested.
 16 Q. When did you make the decision to divest
 17 yourself of the stock that other people had
 18 purchased on your account?
 19 A. It was after this occurred. I was told --
 20 and I had asked them on a number of
 21 occasions to sell the stock, and they had
 22 told me on a number of occasions why don't
 23 you use the money to do other projects and
 24 things like that.
 25 Q. I don't want to interrupt you, you say

Page 632

1 "after this occurred"; what do you mean?
 2 After what occurred?
 3 A. After this occurred.
 4 Q. "This" being what?
 5 A. After this occurred. I made the decision to
 6 sell, and finally they listened to me
 7 because I kept calling them and saying sell.
 8 Q. When did you start calling them and telling
 9 them to sell?
 10 A. Oh, a long time ago.
 11 Q. Well, give me a sense of when it was.
 12 A. Probably in the '80s right after I found out
 13 that they had invested, they had invested
 14 across the board.
 15 Q. That answered my question. Thank you,
 16 Doctor, you've been very patient.
 17 MR. FURR: Just a few more, Doctor.
 18 DIRECT EXAMINATION CONTINUING
 19 BY MR. FURR:
 20 Q. Okay, Dr. Turner, today on at least two
 21 times, by my count, when you and
 22 Mr. Ohlemeyer were discussing the likelihood
 23 that environmental tobacco smoke would
 24 increase an individual's lung cancer risk
 25 you identified factors that you would have

Page 633

Page 635

1 to look at to include the duration, the
2 intensity and the frequency of that
3 exposure, and the genetic makeup of that
4 individual. You recall that?

5 A. Okay. Your question is -- do the question
6 again, please.

7 MR. FURR: Could you just read it
8 back, please, ma'am.

9 (The requested material was read back
10 by the reporter.)

11 A. Your question is, is whether I -- I'm sorry.

12 Q. My question is whether you recall having
13 that discussion with Mr. Ohlemeyer.

14 A. We've had so much discussion today I'm
15 really trying to focus on your question.
16 Would you please -- it didn't make sense
17 when she read it back. Would you please do
18 it again.

19 Q. I'll try to ask a different way.

20 Is it your opinion that the genetic
21 makeup of an individual can affect their
22 susceptibility to having disease induced by
23 environmental tobacco smoke exposure?

24 A. I am not an epidemiologist. I'm not a
25 biochemist. I'm not a geneticist. I do

1 A. Yes.

2 Q. Why is that?

3 A. I'm interested in the fact that -- the
4 litigation against the tobacco industry;
5 that's all.

6 Q. So your interest in the Broin case was just
7 a part of your general interest in
8 litigation against the tobacco industry; is
9 that correct?

10 A. My interest in the Broin case is the fact
11 that -- I mean, I've read about other cases
12 as well, and probably I read more -- no more
13 than maybe three to four articles about the
14 whole case. So I don't even -- I'm just
15 interested. And I read a lot of literature,
16 as much as I can find, about the tobacco
17 industry.

18 Q. What is the nature of your interest in
19 tobacco litigation?

20 A. What is the nature of my interest in the
21 tobacco litigation. It's probably no more
22 than my interest in tobacco and the fact
23 that states are trying to get advertising
24 down and other things. It's just a
25 culmination of all the information regarding

Page 634

Page 636

1 not -- I cannot tell you for certain that --
2 I mean. I would think that part -- there may
3 be some risk but I can't tell you
4 percentages. And I can't tell you
5 whether -- I mean, if -- I've not heard of a
6 family series -- you know, colon cancer, if
7 somebody has familial polyposis, that family
8 has a risk of colon cancer. It's very high:
9 almost 100 percent, I believe. Or 90 to 100
10 percent. If a family has a history of
11 breast cancer. I cannot tell you the same
12 for lung cancer.

13 Q. Was there anything about Mrs. Wiley's
14 genetic makeup that made her especially
15 susceptible to having lung cancer induced by
16 environmental tobacco smoke exposure?

17 A. I can't tell you that that --

18 Q. If you can't, that's fine.

19 A. I can't.

20 Q. Did you follow the flight attendant ETS
21 class action case in Florida known as the
22 Broin case?

23 A. I read a couple of articles in the paper.
24 Whatever, you know, I may have read --

25 Q. Were you interested in that case?

1 the industry.

2 Q. Do you have a hope that, in general,
3 plaintiffs will prevail in their litigation
4 against the tobacco industry?

5 A. Plaintiffs means the people that have been
6 hurt?

7 Q. Including states and individuals.

8 A. I'm not a lawyer, so plaintiffs mean the
9 people that have been hurt?

10 Q. The people that initiate the lawsuits and
11 are seeking money from the tobacco
12 companies.

13 A. If -- if their case is such that the tobacco
14 industry is at fault, yes, I hope they
15 prevail.

16 Q. Do you hope that the tobacco companies go
17 bankrupt due to judgments they have to pay
18 in litigation brought by plaintiffs?

19 A. Let me say this: I believe the tobacco
20 industry is responsible for an incredible
21 amount of disease in our country as well as
22 overseas, and whether they go bankrupt or
23 not, I can't tell you or not. I just
24 believe that the product should not be sold;
25 that it is extremely harmful.

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 637

Page 639

1 When I'm teaching children and I go
2 into schools, we have five- and six-year-old
3 children, and even younger, starting to use
4 smokeless tobacco, starting to smoke. When
5 you have first graders that are trying to
6 smoke and are smoking on a routine basis,
7 there is something wrong about this.

8 It is a drug. It contains a drug. It
9 contains thousands of cancer -- thousands of
10 chemicals, several of which are
11 carcinogenic. And I believe that a product
12 that causes cancer, that causes the disease
13 that we see from tobacco should not be sold.

14 Q. So Doctor --

15 A. I see that firsthand.

16 Q. So Doctor, do you hope that the cigarette
17 manufacturers are forced out of business one
18 way or another?

19 A. I hope that --

20 MR. YOUNG: Well, I'll object. She
21 just answered, gave you a long answer about
22 that question.

23 MR. FURR: This is a different
24 question. Go ahead, Doctor.

25 THE WITNESS: No, it's not.

1 and the pain, the misery, and the loss.

2 Do I hope that they win? Yes. Is
3 there a judgment involved? Monetary
4 judgment? It doesn't matter to me whether
5 it's monetary or not.

6 Q. You don't care one way or another whether or
7 not the plaintiff in this --

8 A. I care --

9 Q. May I finish my question, please, Doctor?

10 A. Yes, I'm sorry.

11 Q. I try not to interrupt you.

12 Is it your testimony, then, you just
13 don't care one way or another whether the
14 jury in this case awards the plaintiff any
15 money?

16 A. Let me say this -- and then that's just from
17 a clinical standpoint. I think if Mr. Wiley
18 feels that he -- I mean, that's really up to
19 Mr. Wiley to state, not me to state. I
20 mean, it's not -- you know, my point in
21 this, and you could ask a number of
22 individuals, I do a lot of work trying to
23 educate the public on both this as well as
24 head injuries as well as alcohol as well as
25 a number of things, and most of the time I

Page 638

Page 640

1 MR. YOUNG: You asked about
2 bankruptcy.

3 THE WITNESS: It's the same thing.

4 Q. You hope that the cigarette manufacturers
5 are forced out of business.

6 A. I hope cigarettes and all forms of tobacco
7 will no longer be sold. I think we will
8 have much more money to spend on other
9 things besides dying and individuals who are
10 extremely ill or ill from tobacco-related
11 illnesses; we can spend it on education, on
12 the environment, on a number of other areas
13 that are hurting because we're spending over
14 \$60 billion a year on tobacco-related
15 illnesses. And that doesn't include the
16 work lost and the horrible heartache that
17 occurs from families.

18 Q. Do you hope that the plaintiff in this case,
19 Mrs. Wiley's estate, recovers a judgment
20 against the tobacco companies?

21 A. I have no interest in the money. My
22 interest -- and I am not being paid for any
23 of this. I mean, I have not asked for one
24 cent. My interest is the fact that I'm a
25 physician, that I see the harm that's caused

1 do that free of charge. I spend hours doing
2 that, because I'm a physician.

3 Do I care whether there's monetary? I
4 think that's up to Mr. Wiley. It's not my
5 say.

6 Q. Well, Doctor, we all know it's not your say
7 as to whether Mr. Wiley recovers any money.

8 A. Yes.

9 Q. My only question is, do you care one way or
10 another whether Mr. Wiley recovers any money
11 in this case?

12 A. If it means that, if they -- when he wins,
13 or if he wins, if that makes people sit up
14 and listen and drives home the point that --
15 that secondhand smoke and the tobacco
16 industry are liable, if in the public's
17 interest, and what the public sees, that a
18 monetary settlement helps that, then that's
19 fine.

20 The most important thing, I think, is
21 for the culpability to fall where it should
22 for her illness.

23 Q. Doctor, you mean that the most important
24 thing to you is that the tobacco companies
25 get punished for her illness?

Page 641

1 MR. YOUNG: I'll object. Asked and
2 answered.
3 A. Punished? Or -- I think what I'm saying to
4 you is, the fact that if a tobacco
5 industry -- and I believe it did -- caused
6 her illness because there was secondhand
7 smoke, that the public was not educated
8 adequately, that there was not -- things
9 were hidden, that this patient was exposed
10 when she did not have to be, that it's --
11 that the -- that the tobacco industry be
12 held liable for that.

13 Now, liability, I mean, is that
14 punishment or is that just responsibility?
15 I believe that they're responsible for her
16 death, as they are a number of deaths, and I
17 think they should be held to that criteria.

18 MR. FURR: That's all I have.

19 MR. OHLEMEYER: I have one
20 question, Doctor.

21 MR. YOUNG: Now, you already
22 stopped.

23 DIRECT EXAMINATION CONTINUING

24 BY MR. OHLEMEYER:

25 Q. Do you think the VA has any responsibility

Page 642

1 for Mrs. Wiley's death?

2 A. I think the VA has, now that they know, and
3 some of the studies and some of the
4 educational things have gone out there, they
5 no longer allow smoking in their wards.

6 Q. My question to you, Doctor, is do you think
7 the VA has any responsibility for what
8 happened to Mrs. Wiley?

9 MR. YOUNG: Well, I object to your
10 question and any further questions. You
11 already took your turn while Jeff was trying
12 to do his notes. You said you were done.

13 MR. OHLEMEYER: Mr. Young --

14 MR. YOUNG: Mike, just let me
15 finish, will you?

16 MR. OHLEMEYER: Let the witness
17 finish. Make your speech. Make your
18 speech. I'm not leaving till the witness
19 answers the question.

20 MR. YOUNG: I'm going to advise --
21 I'm not going to advise the witness of
22 anything. I'm going to inform the witness
23 that she's done if she wants to be done.
24 She's to make her own decision about that.
25 But you're the one that said you were done.

Page 643

1 Q. My question to you, Doctor, arises out of
2 the answer you gave Mr. Furr. Do you think
3 the VA has any responsibility for
4 Mrs. Wiley's lung cancer?

5 THE WITNESS: Do I need to answer
6 this? Yes? No?

7 MR. YOUNG: Totally up to you.
8 Doctor.

9 A. Do I think the VA is liable --

10 Q. Do you think the VA has any responsibility
11 for what happened to Mrs. Wiley?

12 A. Responsibility for the lung cancer. Well,
13 the question is, I mean, this was -- the
14 question is, is the VA responsible.

15 Q. That wasn't the question. The question was
16 do you think the VA should bear any
17 responsibility --

18 A. Responsibility.

19 Q. -- for what happened to Mrs. Wiley.

20 A. I think the VA Hospital is -- I think
21 because of what the tobacco industry has
22 done and how they've hidden some things that
23 have occurred, and what the public has been
24 informed of and the educational process that
25 has occurred, I think that the VA now is

Page 644

1 stating that they no longer allow smoking in
2 their wards.

3 You're asking me to state -- are we
4 picking out the VA from everything else?

5 Q. My question to you, Dr. Turner, is do you
6 think the VA bears any responsibility for
7 what happened to Mrs. Wiley.

8 A. Did they sell the drug?

9 Q. My question to you, Doctor, is do you think
10 the VA bears any responsibility for what
11 happened to Mrs. Wiley.

12 MR. YOUNG: Well, I'll object.

13 It's been asked and answered more than once.

14 A. I can't answer that. I can't answer that.

15 Q. Well, do you think the VA is a victim of the
16 tobacco industry?

17 MR. YOUNG: That's a second
18 question. You said you only had one.

19 A. I really can't answer that because I think
20 you're asking it out of context. I really
21 do.

22 Q. You assisted Mr. Wiley in his effort to
23 obtain compensation, his successful effort
24 to obtain compensation from the VA, didn't
25 you?

NOVEMBER 4, 1997

NICKI C. TURNER, M.D. (VOL. II)

Page 645

Page 647

1 A.I wrote down what I felt needed to be wrote
 2 down and presented the facts of the case.
 3 MR. YOUNG: That's totally
 4 irrelevant.
 5 A.I don't even know -- I have not --
 6 MR. OHLEMEYER: Would you guys just
 7 stop interrupting the witness. Just sit
 8 down and stop interrupting the witness.
 9 MR. YOUNG: Don't be nasty. Now,
 10 we're just trying to keep this fair.
 11 MR. OHLEMEYER: It's late, we're
 12 all tired.
 13 MR. YOUNG: Right.
 14 MR. OHLEMEYER: I've asked the
 15 witness a question, she's trying to answer
 16 it, and you all are trying to tell her she
 17 should or shouldn't answer in the middle of
 18 her answer.
 19 MR. HOWARD: Well, Bill, you're
 20 trying to mislead her.
 21 MR. OHLEMEYER: Oh, that's
 22 ridiculous.
 23 MR. HOWARD: Worker's comp. is
 24 without fault in the state of Indiana and so
 25 that she can't be, by helping him get

NICKI C. TURNER, M.D.

Page 646

Page 648

1 compensation, she can't be assigning fault
 2 to the VA.
 3 MR. OHLEMEYER: I haven't asked a
 4 word about fault.
 5 (Discussion off the record.)
 6 Q.I'm going to ask one more. I'm going to ask
 7 the question one time, Doctor, I want your
 8 best answer to this question.
 9 A.Yes.
 10 Q.Do you think the VA bears any responsibility
 11 for what happened to Mrs. Wiley while she
 12 worked there?
 13 MR. YOUNG: That's been asked and
 14 answered.
 15 A.I truthfully -- I truthfully cannot say.
 16 Because of what has occurred from the
 17 educational standpoint, and what the tobacco
 18 industry has done, I cannot say.
 19 Q.That's your answer. Thanks, Doctor.
 20 MR. YOUNG: Thank you.
 21 MR. OHLEMEYER: We're going to
 22 substitute a copy of Exhibit 22 for the
 23 original Exhibit 22 which is going to stay
 24 with the witness.
 25 AND FURTHER DEPONENT SAITH NOT

STATE OF INDIANA)

COUNTY OF MARION)

I, Patrice E. Morrison, RMR/CRR, CSR 93-R-1030,
 a Notary Public in and for said county and state, do
 hereby certify that the deponent herein was by me
 first duly sworn to tell the truth, the whole truth,
 and nothing but the truth in the aforementioned
 matter:

That the foregoing deposition was taken on
 behalf of the Defendants; that said deposition was
 taken at the time and place heretofore mentioned
 between the hours of 8:00 a.m. and 6:00 p.m.;

That said deposition was taken down in
 stenograph notes and afterwards reduced to
 typewriting under my direction; and that the
 typewritten transcript is a true record of the
 testimony given by said deponent;

And thereafter presented to said witness for
 signature; that this certificate does not purport to
 acknowledge or verify the signature hereto of the
 deponent.

I do further certify that I am a disinterested
 person in this cause of action; that I am not a
 relative of the attorneys for any of the parties.

Page 649

IN WITNESS WHEREOF, I have hereunto set my hand

and affixed my notarial seal this 10th day of

November, 1997.

 PATRICE E. MORRISON, Notary Public

My commission expires:
